

Termite Inspections and Termite Treatments

Termite Treatments and Inspections give Target Pest Control a call 4630 6077 for expert advice

Termite Treatments done the right way, equals peace of mind

- ❖ Our inspection includes the external, internal, roof void and subfloor where termites can access your property.
- ❖ We provide a comprehensive written report in accordance with Australian Standards
- ❖ If termites are found, we will provide you with a number of options to suit every circumstance and budget.

Regular Inspections - Regardless of the system used, regular inspections should be carried out by a QBCC-licensed contractor with the appropriate Termite Management licence to ensure termites have not bridged the barrier. It is recommended that inspections be at least every 12 months, or more often in high risk areas.

Pre-Purchase Timber Inspections - In addition to the Building Inspection, a pre-purchase Timber Pest Inspection is recommended. The Timber Pest Inspection should also be carried out by a contractor appropriately licensed by QBCC.

Reduce the risks -

- ❖ Have Annual Inspection by a Qualified Termite Management Technician.
- ❖ Avoid garden beds up against the building wall
- ❖ Trim any shrubs or trees against building
- ❖ Avoid Leaving loose timber stacked up or leaning against the house
- ❖ Ensure all downpipes diverted away from building, repair any cracked or rusted guttering as moisture near building may attract termites.
