

## CREATE A SECURE CLOUD DATABASE WITH NO TYPING

### Don't Let Objects Slip Away!

Do you have objects that need to be tracked as they move or simply documented for reference?

Or a location that needs periodic cleanliness or branding inspections?

Can't keep up with hard-to-type serial numbers or expensive scanning equipment that your employees don't use?

### SnapTrack® Lets you Track Them

Instead, a member of your team can simply pull out their cell phone and take a photo within SnapTrack® to quickly and securely gather the necessary information for that object to be tracked. The user, time, and place (down to 2 meters) are stored securely with the photo or barcode scan and are instantly visible to management or to other team members anywhere in the world.

### Ready to Scale

From small businesses to corporate behemoths, SnapTrack® scales easily to handle the largest scenarios.

### Fast and Intuitive

Gathers data using photos (not clumsy typing), letting you build your database in minutes. If it sounds simple, that's because it is!

### Made for Flexibility

Runs on team members' own cell phones with customizable security. The only software installed is a trusted Microsoft app which has millions of downloads.

### HIPAA Compliant

Password rotation, multi-factor authentication, self-service password resets – SnapTrack® is built on the secure Microsoft Power Platform and Azure AI for best-in-class security and compliance. Your organization may not need the extra security, but it's there if you do!
