Self adhesive handle, square

The perfect handle design for multi-variable use. The glued-on handle with its 90° corners is our all-rounder. It is suitable for almost all profile series. The handle is available in anodised Silver, Black and Bronze.

Handle cuboid, vertically

It sets accents. The handle cuboid is applied vertically to the infill panel or screwed in place. Its rather filigree appearance makes it a classic design element. A little tip from us: The packaging of the handle cuboid can also be used as a precisely accessories spacer to the profile for mounting the handle.

Handle bar

The sliding door with handle bar made to individual requirements is very easy to handle. As classic as it may appear, it also ensures easy opening and closing of Room dividers and wardrobe doors.

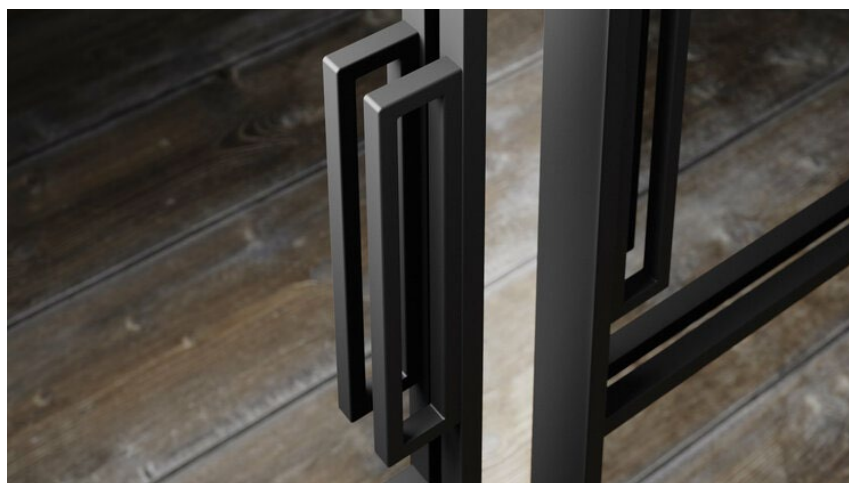

Insert pivot handle, small

An elegant change of direction makes the insert pivot handle ready for use and opens doors. A pivot mechanism turns the panel into an »extendable« handle. This appears and disappears equally quickly and remains in rest mode within the panel. This mode of operation makes it the perfect handle for the raumplus pocket door.

Floating handle

The floating handle for sliding doors of the S1200 series offers inconspicuous connectivity. Seemingly invisibly attached, it floats above the panel material without touching it.
