Panels/surfaces shown may vary depending on availability.

The AIR System is without any bottom track at all, completely barrier-free. The sliding door is hanging on rollers that are running in a top track insert. Only one guiding point at the bottom (base plate with rollers) is required per sliding door to prevent the door from swinging. In addition to the ceiling fixing, a wall mount is also available for the.

The Insert profile is screwed directly to the ceiling. Top track cover (2.36" high) one side included in the delivery. A top track cover is also available for the rear (subject to price surcharge).
