

## EYES & EARS WHILE YOU'RE AWAY

# VOICE DOWN

**The Action-CS Voice Down adapter allows for easy and seamless integration of speakers, strobe lights, and a microphone into a vandal-resistant and weatherproof housing.**

This adapter can be ceiling, pole mounted, or bracket mounted onto new or existing IP cameras to enhance and update the security functionality of the property. With no additional wiring needed to power this device, only the camera's existing CAT5E/6 cable is necessary to power this voice down and control it while providing power to the existing camera via POE.

You can now trigger lights and audio by events through your NVR or manually through your NVR and have two-way or one-way communication through a camera location. This greatly enhances your security and deters any would be criminal activity from occurring. Your customers have the ability to trigger strobe lights and communicate with a perpetrator through a camera location with ease by using their already installed and native NVR system.

### Go live with a few simple steps!

Simply mount the camera to the voice down

01

Plug in the network cable from the camera to the voice down adapter

02

Then plug in the original CAT5E/6 cable into the voice down input

03

Hook up the audio and alarm outputs and you are live!

04
