

# POOL AREA REMODELING

La Perla - Jacó, Costa Rica

07/11/2023

architecture

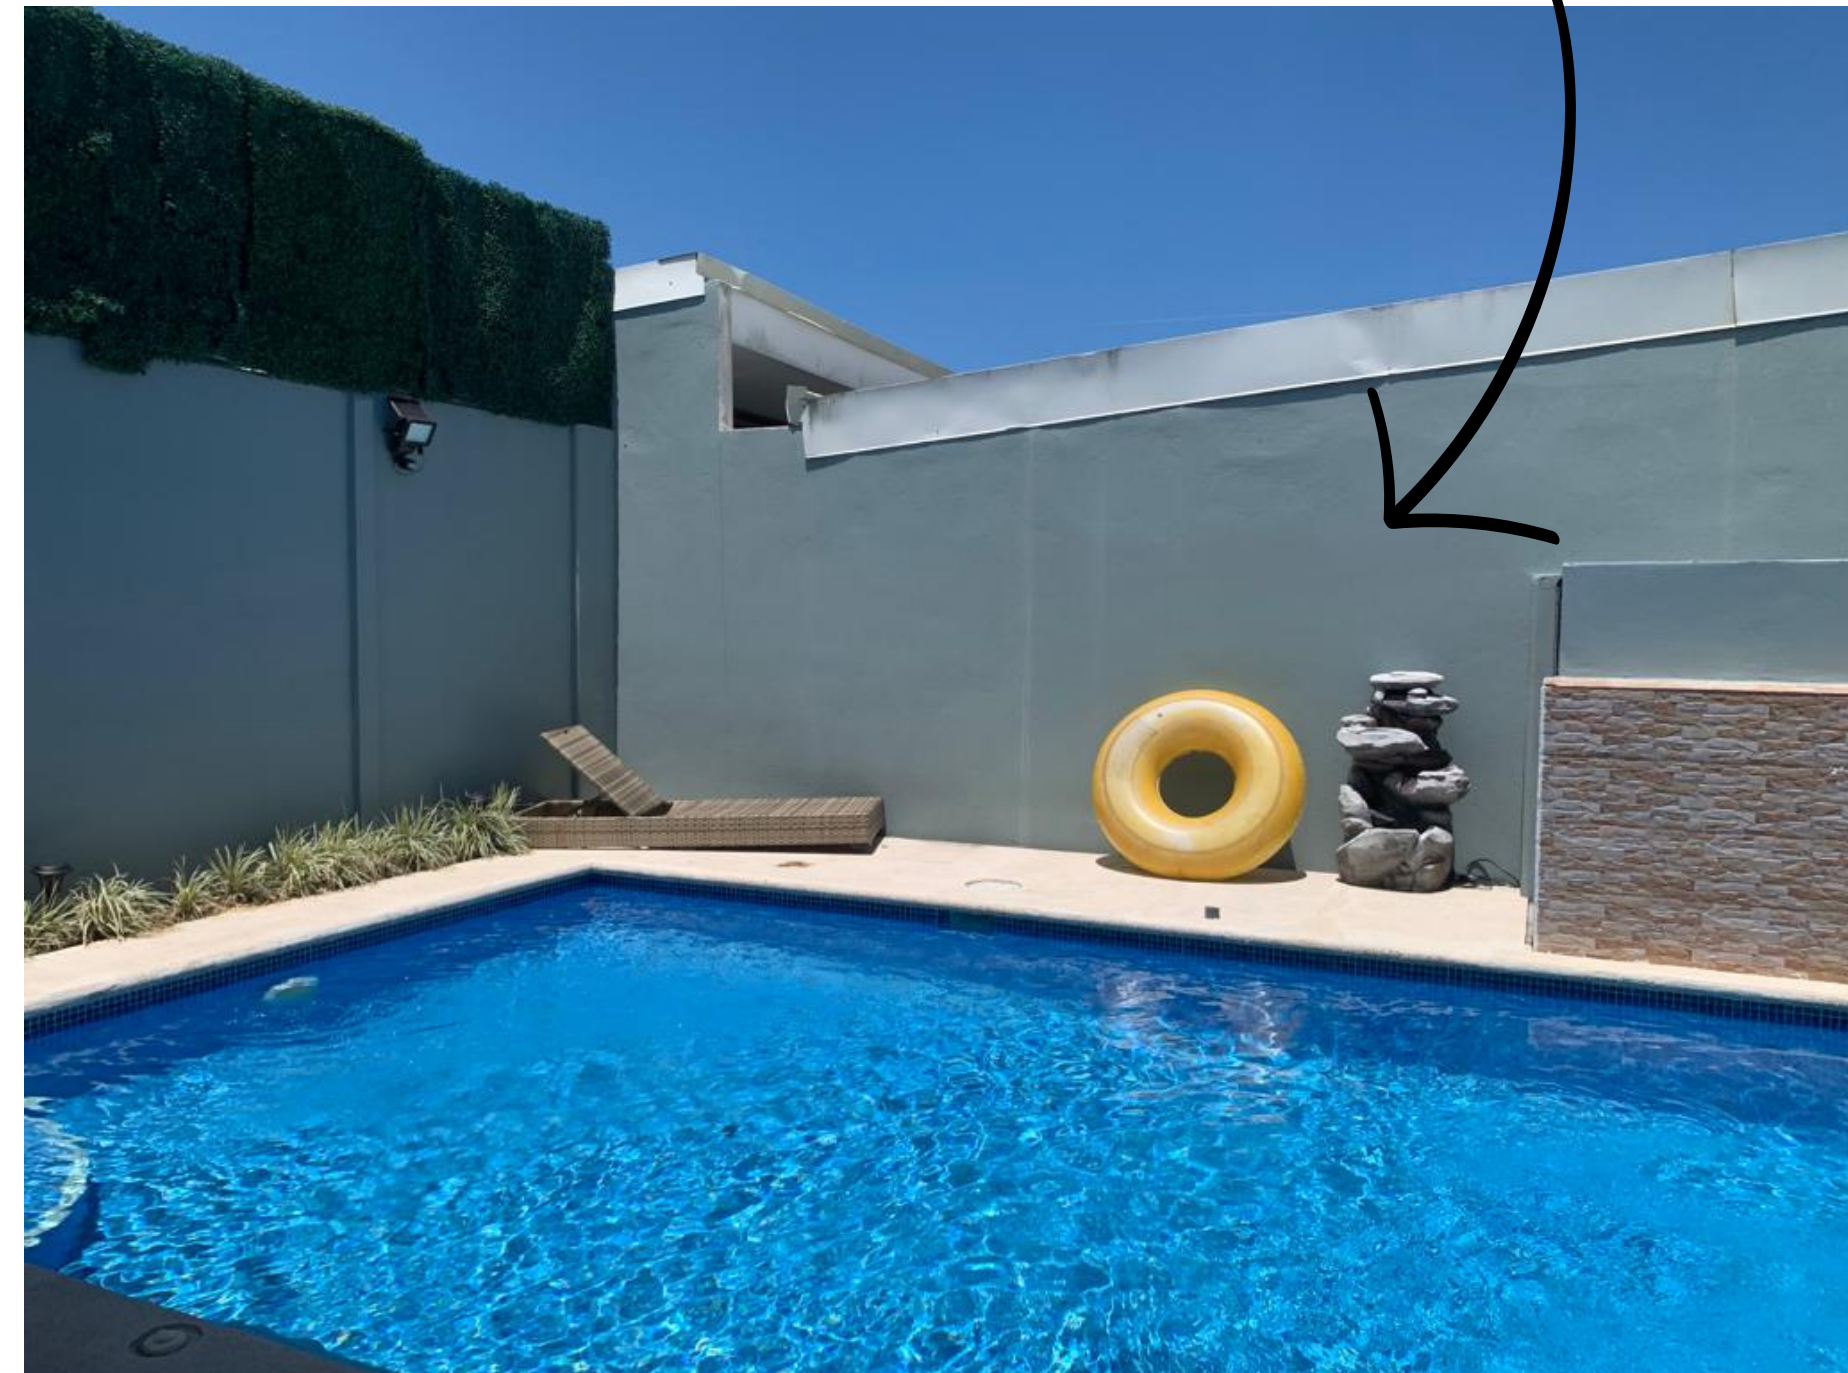

**Some considerations about the current situation of the house which, if changed, can greatly improve the visual effect and use of the space:**

**Untextured and unlit walls, there is not enough space for new landscaping or furniture, it ends up being an unused space**

**Empty wall, unused space**

**Unleveled floors that hinder movement and the placement of furniture**

**Pool machines are the first visual point for those leaving the house and going to the pool, a volume that disturbs the use of the space and it's not visually interesting**

## 3D RENDERING PROPOSAL:

Same stone cladding as inside the house, makes the identity link between outside and inside, brings texture and lighter/whiter tones also being more coherent with the "La perla" concept

New lighting on the walls

Deck structure screwed into the floor that extends over the pool 16 inches, total depth 51 inches, furniture and decorative plants can be placed

**New lights**

**Decorating with  
large plant pots**

**Waterfall - use the space in the pool motors to  
bring in the pipes to make the waterfall**

**New sun loungers screwed into the floor that overhang  
the pool by 16 inches, can be made from the same  
material as the deck with an upholstered seat on top**

**New deck that levels the edge of the pool with the floor of the bbq area**

New plants
