

BIZPAC Presents: Layered Air Defense Briefing by CIMRscientific.com

A long-term solution to stop the spread of COVID-19

Houston – February 25, 2021 – It's been almost a year since we were forced to shut down due to the deadly coronavirus that plagued our country last Spring. Many find themselves wondering, "when will everything go back to normal?" The answer to that question might be more tangible than we anticipated in 2020.

This Saturday, BIZPAC is hosting a briefing that will feature esteemed guest speakers including military leaders, medical specialists, scientists, and business owners who have successfully protected their businesses and reoccupied their buildings. They will discuss in-depth the Multi-Layered Air Defense Strategy and its effectiveness in stopping the spread of all pathogens including COVID-19.

Their goal is to educate the public on how this method combined with CIMRscientific.com technology will improve our way of life. CIMR is a military acronym for "Continuous Infectious Microbial Reduction", which describes a strategy developed and deployed by the US Military to defend against bio-terror threats.

Event moderator and BIZPAC founder, Joseph Trahan, encourages everyone to educate themselves on this technology because it will "give us our freedom back and allow us to fully reoccupy our businesses." Joseph established BIZPAC in 2018 to encourage small and medium sized business owners in Texas to be politically informed and active in their community.

Joseph works closely with CIMRscientific.com technology developer and patent holder, Alton Holt, who is speaking this Saturday as a special guest. Joseph explains that CIMRscientific.com Layered Air Defense Systems "creates a healthy environment at home and the workplace mitigating any pathogen threat."

CIMR technology allows members of BIZPAC to meet in-person in a safe environment. BIZPAC's goal is to see businesses safely operating at full capacity so that the economy can recover. BIZPAC founder, Joseph Trahan, describes their organization as a resource "to serve businesses and influence policy that will ultimately help the economy thrive."

The technology is used in 10,000 military installations globally, NASA's International Space Station, medical facilities, Harris County Offices, Houston Baptist University, the Spectrum Building, Federal America Grill and other first tier commercial properties.

BIZPAC is an association of business owners networking together to set a business-friendly legislative agenda. Members of this organization correspond with legislative bodies and municipal governments to bring about fair and reasonable change, while elected and appointed officials keep business owners well-informed of upcoming legislation.

Special Guests will include:

Lt. General (ret) PK Carlton, Jr.

MD: 17th Surgeon General of the United States Air Force, Former Director of the Homeland Security Initiative, Texas A&M Health Science Center
