- Fruit Shape : Cylindrical
- Fruit Colour : Shiny Green
- Fruit Length : 40 - 45 cm
- Fruit Weight : 600 - 750 gm
- Maturity : 50 - 55 days

DIVYA

Benefits:

Very early hybrid and bulker
Long, smooth, parrot green coloured cylindrical fruit
Fetches good prices in the market because of attractive colour
High yield potential
First Harvest: 42 – 47 Days
Fruit Size: Length – 230 cm, Width – 6.5 – 7.5 cm
Fruit Weight: 0.7 – 0.8 Kg

VIRAAT

Plant Type	:	Strong plant with dense foliage
Fruit Colour	:	Light green
Fruit Length	:	19 to 22 cm
Fruit Diameter	:	4 to 5 cm
Average Fruit Weight	:	200 to 250 gm
Fruit Skin	:	Smooth
Days for First Picking	:	43 to 45 days
Temp. for germination	:	25 °C – 30 °C
Spacing	:	180 x 30 cm
Seed rate	:	300 - 400 gm / acre.

DAKSH

Fruit Colour- Dark green & Cylindrical Shape
Fruit Length - 18-20 cm
Fruit Diameter - 4 to 5 cm
Fruit skin - Smooth
Fruit Weight- 160-180 gm
First Picking- 42-45 days

F1 HYBRID VEGETABLES

ADHIRAJ

Fruit colour: Dark green & Yellowish green on maturity.
Fruit Shape: Round to flattish round.
Fruit weight: 2.5 TO 3 kg (50-55 Days) & 6-8 Kg on maturity.
Fruit Maturity: 110 - 115 DAYS (After sowing).
Flesh colour: Orange yellowish.
Special Features:
Attractive & Uniform size fruit
Good shelf life.
Medium size, High yielding hybrid.
Ideal for long distance transport

NANDA

Colour : Dark Green
Shape : Long and Thin
Fruit size : Length 20-25 cms, Width 3-4 cms
Fruit weight : 100 -150 gms
First harvest days : 45-50
Seed Rate : 0.8 -1.5 kg/acre
Sowing distance : Line to line 5-8 feet, Plant to plant 2-3 feet
Special features :
Early and profuse fruit set
More no. of picking
Attractive dark green fruits
High yield potential.

MAHIMA

Special features :
The uniformly shaped white roots gives it a fleshy and crispy texture.
Root Shape: Uniform, Smooth and White crispy
Roots : Can stay in the soil for long period after maturity.
Root Length: 10- 12 inches long
Root Flesh & Pungency : Mild Pungent
Fruit Weight : 250 – 400 GM
Maturity : Early 45 - 55 days

LOKNATH

Very early fruit maturity and Tolerance to Bacterial Wilt sour type hybrid.
SEGMENT: Acidic.
SEED REQUIREMENT: 50-70kg/acre.
SOWING PERIOD: Kharif.
FIRST PICKING: 55-60 days.
SPECIAL features:
Very Early Maturity, Robust Hybrid.
Determinate Plant growth.
Fruit flattish round with green shoulder.
Average fruit weight 70-80gms. Medium firm.
First harvest 55-60 days after transplanting.
Tolerant to Bacterial wilt.
Fruit sets at high temperature.
