ADN

DETAILED PROJECT REPORT

Surveillance On Hire

Introduction

ADN offers high-definition IP cameras on rent. These cameras are technologically advanced and embedded with features that make them easy to use. They are also of high definition, so you can get the same level of details in the recorded footage as you see in the live image.

ADN's IP cameras are a more affordable option than purchasing a CCTV camera. They can be rented on a temporary basis, so you can ensure the security of your premise or keep an eye on it while you're away.

ADN's IP cameras can be installed using your existing network infrastructure. They can also be integrated with wireless network systems, which allows for unlimited expansion.

ADN is a leader in the IP camera rental sector. We have over a decade of experience in surveillance systems. Our team of experts will assist you throughout the installation process and help you choose the right IP camera for your needs.

Benefits

Here are some benefits of using rental CCTV:

- **Affordability**: Renting cameras is a more affordable option than purchasing them outright. This is especially true for businesses or organizations that need to use cameras on a temporary basis.

- **Flexibility**: Renting cameras gives you the flexibility to choose the right cameras for your needs and to change them as your needs change. You can also rent cameras for specific events or projects, without having to commit to owning them long-term.

- **Convenience**: Renting cameras is a convenient option. You don't have to worry about storing or maintaining the cameras, and you can return them when you're finished with them.

- **Expert installation & support**: When you rent cameras from a reputable company, you can be sure that they will be installed correctly and that you will receive technical support if needed.

Use-Cases

Here are use cases of the benefits of renting cameras:

- Securing an **event or seminar** by rental surveillance is a great way to deter crime, protect your guests, and ensure the safety of your event.

- A **small business** that needs to use cameras for security purposes can rent cameras on a monthly basis. This is a more affordable

option than purchasing cameras outright, and it gives the business the flexibility to change the cameras if they need to.

- A school or university that needs to use cameras to monitor its hallways and classrooms can rent cameras on a semester-by-semester basis. This is a convenient option, as the school doesn't have to worry about storing or maintaining the cameras. These can also be used to monitor any **tests or exam centres.**

- Rental cameras can be used to monitor **construction sites** to deter theft and vandalism. This is a good option for construction companies that want to protect their property or that want to ensure the safety of their workers.

Features

On requirement or demand of client, here are some of the features of IP cameras which ADN offers:

- **Object detection**: IP cameras can be used to detect objects in a scene, such as cars, trucks, or packages. This can be used for a variety of purposes, such as counting vehicles in a parking lot or tracking packages as they move through a warehouse.

- **Face recognition**: IP cameras can be used to identify people by their faces. This can be used for security purposes, such as identifying known criminals or tracking missing persons.

- **Heat maps**: IP cameras can generate heat maps, which show areas of a scene that have been frequently visited. This can be used to identify areas of high foot traffic, such as entrances and exits, or areas that may be of interest to criminals.

- **Anomaly detection**: IP cameras can be used to detect anomalies in a scene, such as sudden changes in activity or the presence of unauthorized objects. This can be used to identify suspicious activity or to prevent accidents.

- **Human detection**: IP cameras can automatically detect humans in a scene, even in difficult conditions such as low light or poor weather. This can be used for security purposes, such as identifying and tracking trespassers or suspicious activity.

- **Motion detection**: IP cameras can detect movement in a scene and trigger an alarm or record footage. This can be used to detect intruders or to track the movement of people or objects.

- **Audio recording**: IP cameras can record audio, which can be used to identify people or to gather evidence.

- **Cloud storage**: IP cameras can store footage in the cloud, which makes it accessible from anywhere.

- **Remote access**: IP cameras can be accessed remotely, which allows you to monitor your property or business from anywhere in the world.

Rented vs Owned

Why choose rented cameras over owned cameras for event security?

Thank you
