

Dr. Kevin Hirano Optometry

Optomap Retinal Scan Technology

Dr. Kevin Hirano is pleased to offer to you and your family the most advanced technology in eye disease detection, the Optomap Retinal Scan.

Dr. Hirano is concerned about retinal diseases such as macular degeneration, glaucoma, retinal detachments and diabetic retinopathy; all which can lead to partial loss of vision or blindness. Additionally, systematic diseases such as diabetes and high blood pressure can be detected with a retinal examination. Eye exams with retinal evaluations can help you safeguard both your eye sight and general health.

The Optomap Retinal Scan allows Dr. Hirano to thoroughly evaluate your internal eye health with dramatically improved precision that includes a depth in the retina not seen with regular dilation.

With an annual scan, Dr. Hirano can track your eye health for concerns, comparisons and treatments. Because medical and vision insurances do not pay for routine scans, there is a **\$39.00** fee for this procedure.

(Please advise staff if you have a history of epilepsy, seizures or migraines caused by bright flashes of light)

The Optomap eliminates the need to be dilated (in most cases)

_____ I elect to have the Optomap Retinal Scan.

_____ I decline the Optomap Retinal Scan.
