## ● The Hidden Danger in Your Home: Mold A Complete Guide by Skydrop Restoration

### 1. ⚠️ The Dangers of Mold

Mold is more than an unsightly stain on your wall—it's a real threat to your health and your home.

- Breathing in mold spores can cause:
  - Respiratory problems
  - Allergies
  - Asthma attacks
  - Fatigue and skin irritation
- Mold weakens the structure of your home, damaging walls, ceilings, and floors.
- It spreads quickly and thrives in hidden, humid places.

If you have children, elderly people, or someone with a weak immune system at home, mold is even more dangerous.

### 2. 🔍 How to Identify Mold in Your Home

Sometimes mold is visible. But often, the signs are subtle:

- Musty, unpleasant odor
- Black or green spots on ceilings, walls, or behind furniture
- Peeling paint or water stains
- Allergy-like symptoms when you're at home

Not all mold is visible. Trust your senses—smell and how you feel in certain rooms.

### 3. 🕵️ How to Find Hidden Mold

Some of the most dangerous mold can't be seen with the naked eye. It hides in:

- Behind walls or under floors
- Inside HVAC systems or ductwork
- Under sinks and behind appliances
- In attics or basements with poor ventilation

Skydrop Restoration uses professional moisture scanners and inspection tools to detect mold you can't see.

#### 4. ❌ What NOT to Do if You Find Mold

- Don't try to clean it with bleach or home remedies. It might make it worse.
- Don't ignore it. It won't go away on its own.
- Don't paint over it. The mold will come back—and stronger.
- Don't stay in a contaminated area, especially if you're having health issues.

#### 5. ✅ What You SHOULD Do

• Step away from the affected area

• Avoid touching the mold

• Contact Skydrop Restoration immediately for a free inspection

We'll inspect your home, detect hidden damage, and guide you through every step—from mold removal to insurance claim assistance.
