ASPV2501 - Ancram Solar PV Hazardous Waste Determination 05.08.26 1.pdf;

Subject: Ancram Solar - Walden Environmental Engineering Hazardous Waste Determination Report - Dated 5/8/2026

Dear Planning Board-

Attached please find a copy of the updated Walden Environmental Engineering – Hazardous Waste Determination Report which was discussed during the recent May 7th Planning Board Meeting. Please acknowledge receipt and make the report part of the public record and the Town site for the project.

The Report states that the RIC Energy Ancram Solar Application is incomplete, as the developer has not provided a hazardous waste determination for the proposed panels. Without such documentation as required by Federal & NYS regulations, the Town has no choice but to require that the project decommissioning surety bond assume that the panels are hazardous, which can cost 5x more non-hazardous material for disposal.

Allowing a decommissioning bond based on disposal of panels as non-hazardous material without the required TCLP determination would expose the Town to potentially massive future liability.

Thank you again for all your time and effort on this project!

Best regards,
Jeff Baker
