

GLORYBOUND LASERTRAIN

Software used: InDesign, Photoshop and Acrobat for PDF.

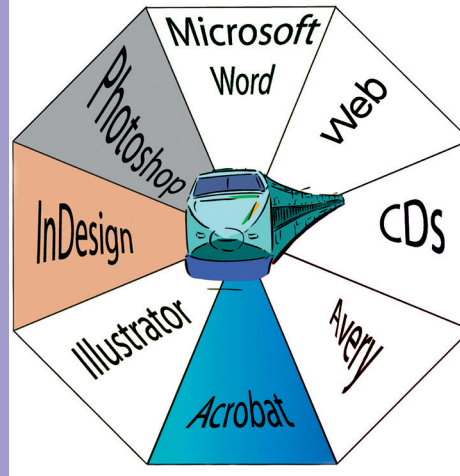

- ◆ **Black Diamond Slope (hard)**
- ◆ **Intermediate Slope (medium)**
- ◆ **Rope Tow (easy)**

◆ **Print Set 134: CD Card 4 Page**
Print for Mini CD (For attachment of CD.
 Prints three per page)

Readying your print

This card is made to fit with the Print Set Books and holds a mini-cd on the top. Make your cover using publishing software. I use InDesign in conjunction with Photoshop then convert the document/photos into PDF format. It doesn't matter which publishing software you use as long as you convert the document to a PDF if you have printing conflicts. The template (same number in 'Glorybound Pattern 134) is set up using In-

Design because it is easy to move the margins and you can actually measure the paper and move them over if you need to.

Check the screen Menu of InDesign to prevent printing conflicts:

Go the Set Up Menu of the InDesign Screen

>Set Up

> Needs to be Landscape mode to be congruent

1. Set up paper

110 wt Index Paper

2. Computer Printer Settings

File>Print

General: >Copies>2

Pages: (√ Range) >1,3

Print the odd pages then turn the paper over putting it into the bypass tray and print 2,4

*Make sure to put the second side face up with the lowest pages on the top of the stack. Also confirm the up and down direction by placing the stack the same direction as it came out of the printer.

Sequence:

>All Pages

>Setup... (Bottom of screen on left)

>Setup>Preferences>Printing Preferences

Basic screen

Original Size 8 1/2" X 11"

Paper Size Same as Original

Mode Landscape

Zoom Auto

Paper tray bypass

Bypass tray>Paper settings for each tray

>Paper type >Thick 4

Output Method>Print

Lay out: 1 sided

Binding Position: Auto bind

Finish: None

Cover Mode: No change

Stamp/Composition: No change

Quality: Document/Full color

Design because it is easy to move the margins and you can actually measure the paper and move them over if you need to.

Paper tray bypass

Bypass tray>Paper settings for each tray

>Paper type >Thick 4

Output Method>Print

Lay out: 1 sided

Binding Position: Auto bind

Finish: None

Cover Mode: No change

Stamp/Composition: No change

Quality: Document/Full color

3. Printer Screen (on the Cm 5520)

Basic screen

Auto Color: No change
 Paper: Bypass
 >Thick 4
 Zoom: No change
 Duplex: No change (defaults to 2 sided)

Finishing

Fold/bind None

You don't need to make any other changes using the printer screen on the Cm 5520.

*Note that the printer will quickly default back to 'auto' paper tray settings, so I recommend that you program the screen on the printer last in order to avoid it defaulting while you are programming the computer screens and organizing your paper.

For the other side:

Turn the paper over and re-insert into the bypass tray putting the paper the same direction as you removed it from the outake basket. I recommend that you print more than one as samples, then when you put them both back into the bypass tray, you have two copies in-case the first one ends up to be printed upside-down. That way you will have the wrong way marked on the trail, so you can follow the right path. The first copy becomes your marker. It is easy because the paper can only go into the bypass tray two ways.

1. Set up paper

110 wt Index Paper with feet-up into bypass tray. Put page 1 on top followed by page 3. Remember that the copier prints on the bottom, so the printed sides must be up. They actually look upside-down face up in the bypass tray (for this print/pattern set).

2. Computer Printer Settings

File>Print

General: >Copies>2
 Pages: (√ Range) >2,4

3. Printer Screen (on the Cm 5520)

Basic screen

Auto Color: No change
 Paper: Bypass
 >Thick 4
 Zoom: No change
 Duplex: No change (defaults to 2 sided)

Finishing

Fold/bind None

You don't need to make any other changes using the printer screen on the Cm 5520.
