# Understanding a Financial Model for Rural Data Centres

CRRBC Rama  
June 2025

# Introduction to Pardal Ventures

## About Pardal Ventures

Pardal Ventures provides corporate development and financial advisory services to mid-market businesses in Canada, the United States and the United Kingdom. We specialize in business strategy, business valuation, corporate and project financial advisory with extensive experience in the telecom and broadband sector.

Our firm Principal, **David Pickett**, is a Chartered Business Valuator (CBV) with deep experience in advising mid-market firms, Indigenous communities and governments on strategic and financial matters, specifically when it pertains to digital infrastructure.

# Satisfied Clients

PARDAL VENTURES  
ADVENTURE, PASSION, PERSISTENCE

# Objective of the Session

**Understand cost and revenue drivers for a data centre project**

**Explore a working financial model**

**Assess feasibility using metrics like payback and breakeven analysis**

# Context Recap

Data centres operate at the intersection of real estate and digital infrastructure — combining the physical demands of specialized, high-value property with the performance requirements of mission-critical IT services.

Rural data centres (“DC”s) promise decentralization, job creation, and data sovereignty.

High capital expenditures, complex operating models, and uncertain revenue are barriers to successfully building and operating a DC.

Why does a financial model matter?

It turns vision into an investment case, **helping you answer why or why not to proceed.**

# Commercial Model & Funding Sources

Vertical integration

Public-private hybrids

Community-led or co-op models

**We will focus on simple model where a Private Owner Operator evaluates building a Tier 1 Data Centre with a simple financing structure.**

# Financial Model Structure Overview

The financial model consists of an **Input** tab with the following key data entered in the **graphic below** along with a **Model or Outputs** tab that includes all key calculations to generate the information you see on the **graphic on the right**.

## General Assumptions

(all \$ expressed in CAD)

		Notes
Model Start Date	2025-06-10	
Fiscal Year End	2025-12-31	
Inflation	2.25%	Based on Canadian CPI
Months per period (full year)	12	

## Cost Assumptions

# Key Assumptions

## Operations

**All-in Power cost per KW – \$0.15\***

*\*arguably the most important variable*

**PUE (Power Usage Effectiveness) – 1.4**

**Price per Rack - \$2,000 per month per 42U rack**

**Ramp-up of racks/tenants – Initially 50% occupancy up to 90% over time**

**Staffing and maintenance – 2 FTE with some contracted security \$200K per year**

### Capital & Depreciation Schedule

Project timing	2 years
Start Date	2025-06-10
Operations Start	2027-06-10

Project Cost	
<i>Building</i>	625,000
<i>Land</i>	22,500
<i>Modular containers</i>	2,000,000
<i>Electrical Infrastructure</i>	800,000
<i>Mechanical infrastructure</i>	437,500
<i>Racks</i>	300,000
Subtotal	4,185,000

Let's dive in...

# Interpretation of Results

PARDAL VENTURES  
ADVENTURE, PASSION, PERSISTENCE

**What matters most?**

Power costs

Speed of occupancy (revenue ramp-up)

Anchor tenancy and Price per Rack

**Let's take a look at the Dashboard**

# Lessons Learned

PARDAL VENTURES  
ADVENTURE, PASSION, PERSISTENCE

**Not all rural data centres are financially viable –  
modelling helps stress test the vision**

**Community benefit should be balanced with the  
need for sustainable returns**

**Financial Models help align stakeholders  
(investors, utilities, and local government)**

# Parting ways

PARDAL VENTURES  
ADVENTURE, PASSION, PERSISTENCE

**What assumption would you most be concerned with in your region?**

**Would you like to test a version of the model yourself?**

PARDAL VENTURES
