# High-speed Internet in Canada and the Universal Broadband Fund

## Canada's Rural and Remote Broadband Community Kelowna Conference & Expo 2024

# Federal Investments Since 2015

Over **\$7.6B** committed to federal broadband funding since 2015:

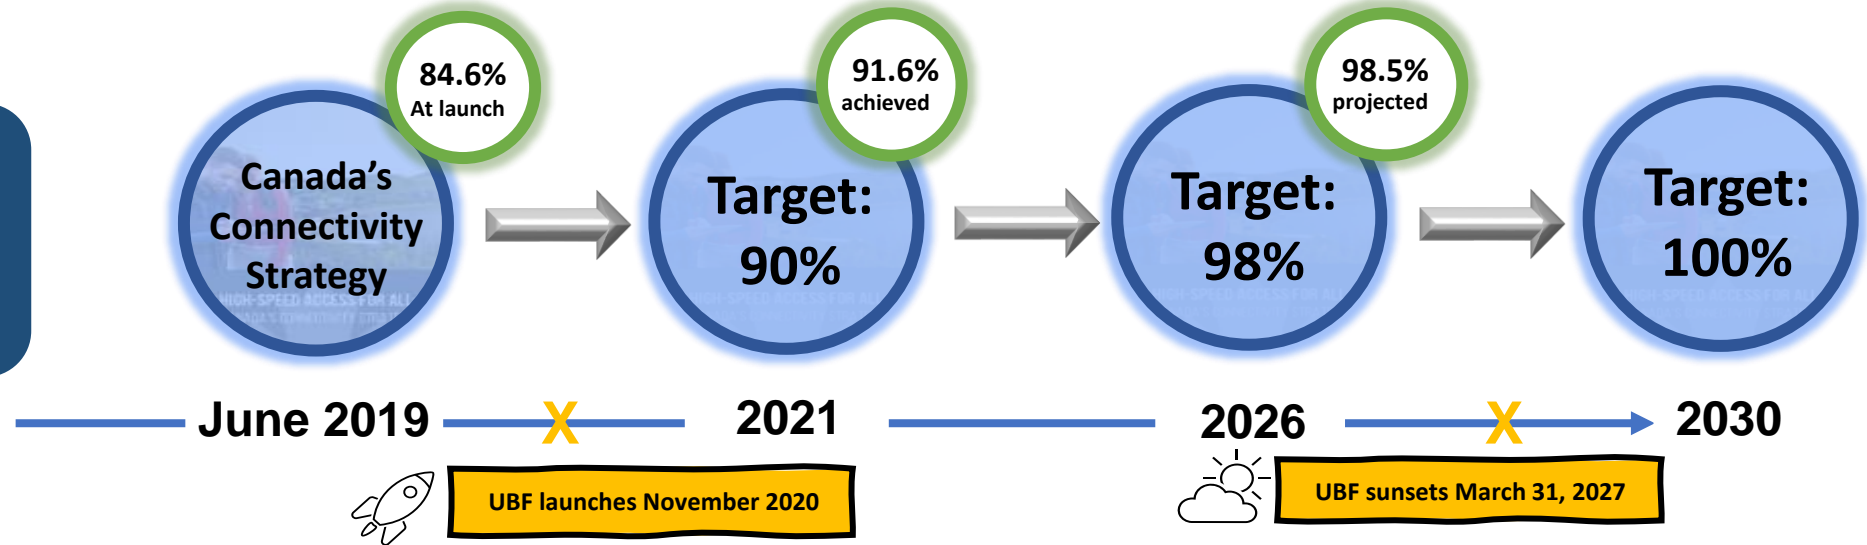

Program	Department	Broadband Funding
UBF	ISED	\$3,225,000,000
CIB Bank - Growth Plan	CIB	\$2,000,000,000
CRTC Broadband Fund	CRTC	\$675,000,000
Low Earth Orbit	ISED	\$600,000,000
Connect to Innovate	ISED	\$585,000,000
Investing in Canada Infrastructure Program - Rural Stream	INFC	\$340,931,832
First Nations Infrastructure Fund	ISC	\$75,618,723
Small Communities Fund	INFC	\$65,869,333
Connecting Canadians Program	ISED	\$28,000,000
ISC - Other	ISC	\$19,189,748
COVID-19 Response and Resilience Funding	INFC	\$4,523,718
PrairiesCan	PrairiesCan	\$1,954,000
<b>Total</b>		<b>\$7,621,087,354</b>

# National Targets and Progress

In December 2016, the CRTC declared high-speed Internet as 50/10 Mbps

Key milestones:

50/10 Service	2016	2023 (current)	2026 (projected)	Mobile	2022
All Households	84.5%	94.8%	98.5%	All Households	99.5%
Rural	39.4%	75.3%	92.9%	Rural	97.3%
First Nations	27.3%	60.4%	84.6%	First Nations	88.3%

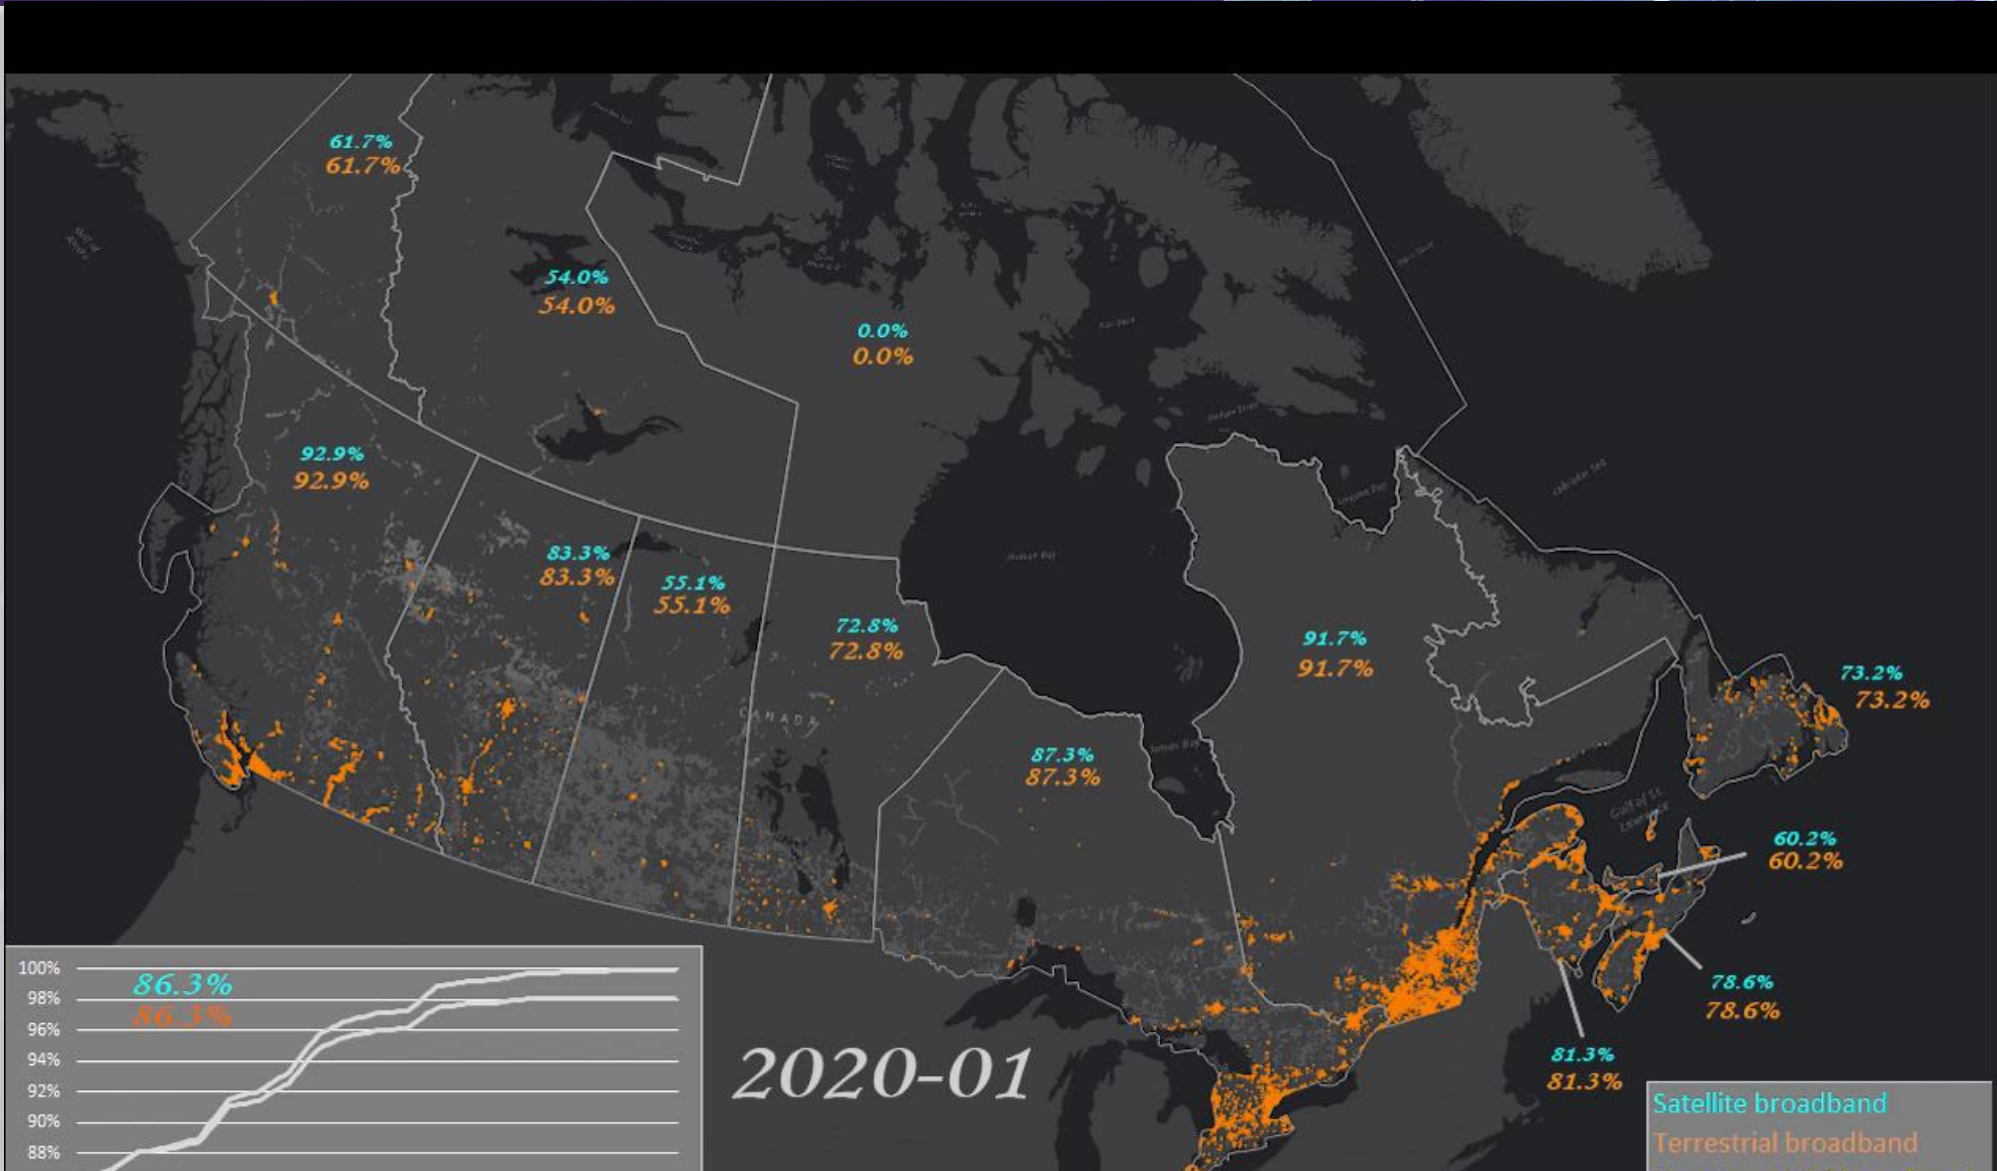

# Universal Broadband Fund and Progress

- \$3.225B program that supports high-speed Internet projects (50/10 Megabits per second) and mobile projects in rural, remote and Indigenous communities.
- \$2.5B announced under the UBF and more in the future.

- UBF funding has been awarded almost equally to large ISPs (\$902M – 150 UBF projects) and smaller players (\$811M – 216 UBF projects) including municipalities and Indigenous groups.
- Current partnership opportunities:
  - In British Columbia: Open intake under the Connecting Communities BC program;
  - In Alberta: UBF call for interest closing in November 2024;
  - In Manitoba and Saskatchewan: UBF call for interest closed September 27th.

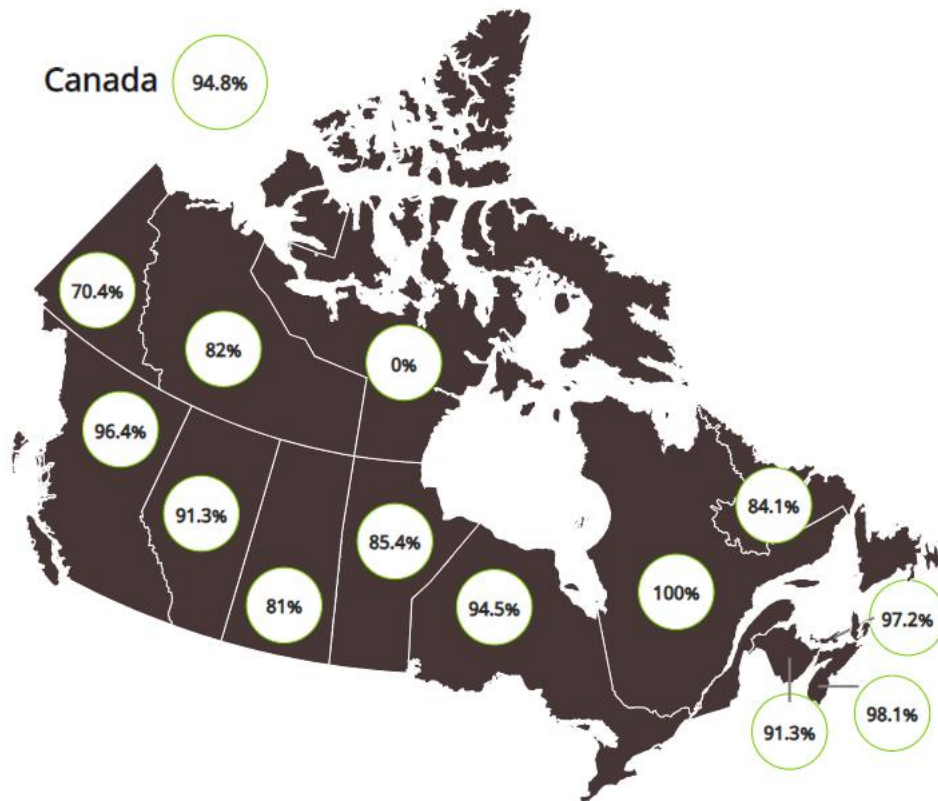

# Evolution of Broadband in Canada Since 2020

# Track our progress

## High-Speed Internet Access Dashboard

An online tool to track the government's progress and investments in broadband nationally and by province and territory

### Canada

Progress as of December 2023

#### Program Funding

Approved program funding since 2015 on high-speed Internet projects in Canada

September 2023

\$3,729M

December 2023

\$3,790M

Funding is based on approved and announced federal high-speed Internet projects.

#### High-speed Internet Available

Projections are estimates based on planned initiatives, and are subject to change.

Households with Access

94.8%

2030 National Target: 100%

2026 National Target

Target: 98%

Projected: 98.5%

2021 National Target

Target: 90%

Actual: 91.6%

Households (%) with access to minimum Internet speeds of 50/10 Mbps in Canada

Connectivity strategy baseline  
Had high-speed access on December 31  
Projected to have high-speed access on December 31  
National target (2021-90%, 2026-98%, 2030-100%)

#### High-speed Internet Not Available

Households without access to minimum Internet speeds of 50/10 Mbps (%) in Canada

# Track projects across the country

## When Will I Get Connected?

Search (by community, program, province, recipient) to see if a federal project is coming to your community. You can also track its current construction stage and expected completion date

### High-Speed Internet Access Dashboard

 Broadband dashboard

 When will I get connected?

Find projects in your area by using the search field below.

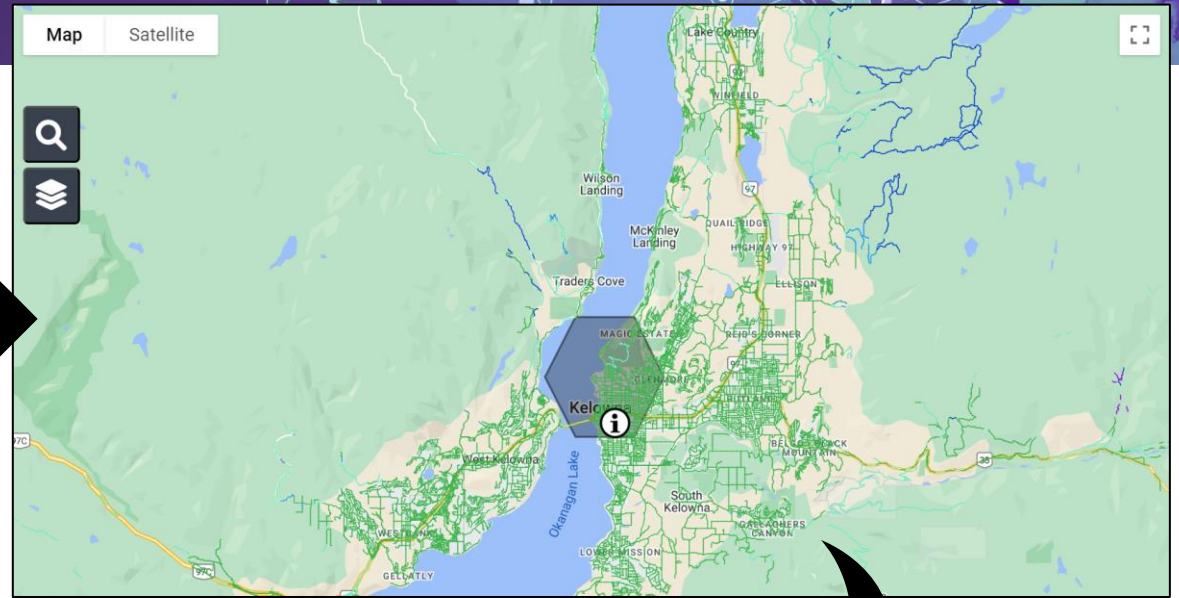

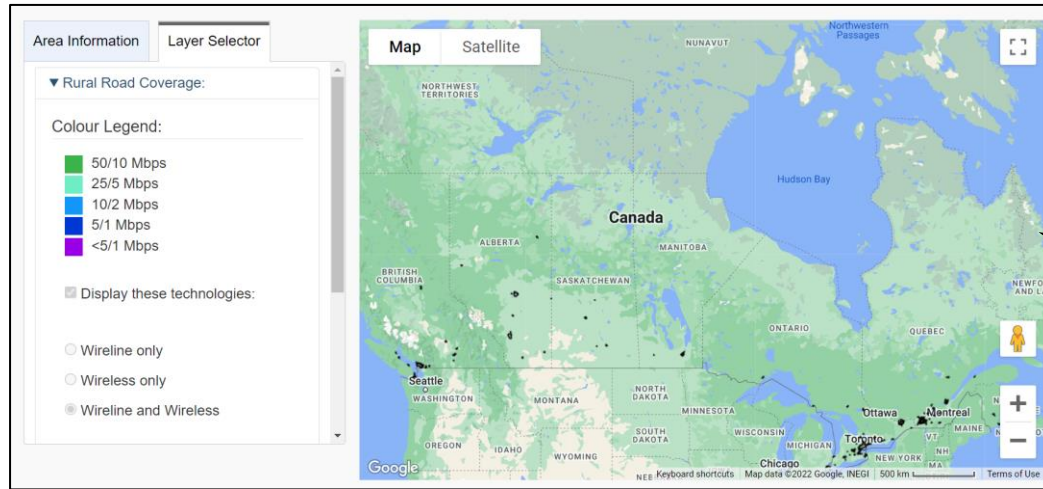

Search

Having trouble finding projects in your area? Check the [National Broadband Internet Service Availability Map](#) to find connectivity projects that may be underway near you.

Program Name	Funding Recipient	Technology Type	Province/Territory & Location (by community)	Program Funding	Project Stage	Expected Completion Date
Universal Broadband Fund	Arrow Technology Group (ATG)	Fibre	Alberta Gift Lake	\$2,110,453	Planning	2025-03-31
			<a href="#">View project details</a>			
Universal Broadband Fund	Arrow Technology Group (ATG)	Fibre	Alberta Wabasca-Desmarais	\$2,132,503	Planning	2025-12-31
			<a href="#">View project details</a>			

Program Name	Funding Recipient	Technology Type	Province/Territory & Location (by community)	Program Funding	Project Stage	Expected Completion Date
Universal Broadband Fund - Rapid Response Stream	Prairie Crocus Rural Internet	Fibre	Saskatchewan Waterpark Estates, Aberdeen, Eagle Ridge Country...more ▾	\$1,297,451	Operational	2022-10-31

# The National Broadband Map

- ISED updates the map twice annually (May / November) with coverage mapped at the 250m road segment level.
- For each road segment, an assessment of current service and upcoming projects is done by technology and speed.

50/10 Mbps  
25/5 Mbps  
5/1 Mbps  
<5/1 Mbps  
\* No service (No colour)

# Success Stories – British Columbia

- Great progress is being made across British Columbia over our goal of 100% access by 2030. Projects under the Connecting Communities BC program are co-funded by the Government of Canada and the Government of British Columbia.
- In the aftermath of the COVID-19 pandemic, a Rapid Response Stream was established under the Universal Broadband Fund in order to support Canada's economic recovery.
- Through that stream, **14 projects** were approved in British Columbia, representing federal investments of **\$22.7M** under the UBF to bring high-speed Internet access to over **6,900 underserved households**. In fact, **two of these projects support the Okanagan area**.
- The projects, completed over the course of 2021 to 2024, are all operational. As a result, **54 communities** can now access high-speed Internet.

# Success Stories – Shoal Lake, Ontario

- Located in northwestern Ontario, the community has endured numerous challenges due to weak connectivity—from disruptions in daily business operations to a lack of online health care access.
- In June 2021, the Government of Canada announced a UBF project that would connect residents of the Iskatewizaagegan No. 39 Independent First Nation to high-speed Internet. This was part of an announcement for **6,124 underserved households, 2,953 of which are in Indigenous communities.**
- “We never thought we'd see the day, but we were able to do full-on conference meetings. It was a great feeling.” -Christina Mandamin, Health Director, Iskatewizaagegan No. 39 Independent First Nation
- Community members are now also able to access telehealth services, enabling people to meet with doctors virtually when in-person appointments are not possible.

# Success Stories – Village of Thode, Saskatchewan

- High-speed connectivity has rapidly transformed the village of Thode over its short history—going from a summer vacation destination to a growing, year-round community.
- As a result, current and future residents of the community can depend on a consistent connection that lets them work remotely, start an online business from the comfort of their home and access essential services, reliably.
- In February 2022, the Government of Canada announced a project that will connect the residents of the Village of Thode to high-speed Internet through service provider FlexNetworks. The project is targeting **343 households in Shields and Thode.**
- As a result, current and future residents of the community can depend on a consistent connection for working remotely, start an online business from the comfort of their home and access essential services, reliably.
