The Next Generation Fiber Optic Network with Global Reach and Local Impact

KatloTech Communications is planning to provide world-class, next-generation telecommunications solutions through the use of fiber optic & Modular Data Center technologies.

Our commitment is to provide broadband solutions that will support all business ventures, communities, governments in the Northwest Territories, and beyond. Our main goal is to innovate the North by Net Neutrality, with no limits, no caps and no slowdowns through the use of fiber-optic network and Data Center technology.

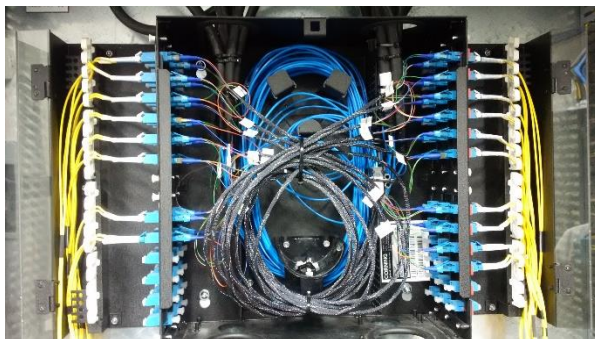

We would like to bring cloud-based services, lower broadband rates, and enable competition that supports Northern Industry, Communities, Governments, and World Markets.

Project Summary

KatloTech Communications is aiming to build and deploy an Indigenous-owned next-generation fiber-optic network infrastructure connecting the Northwest Territories into Global Markets. This robust fiber-optic network will offer wholesale broadband access to providers, resellers and have the ability to host services such as Internet, Cloud Services, IP telephone services, cellular and digital TV services.

KatloTech Fiber Optic Network Data Center & NOC's

We will offer a unique forum of the leasing fiber optic backbone, data centers, and wireless networks for faster cost effect, and sustainable broadband access. Our project will provide environmentally small footprint data centers to open up economic opportunities in cloud-based services currently not available in Canada's North. This level of services will greatly exceed the current offerings of any other traditional Internet Service Providers (ISP) operating in Northern Canada.

The project entails the estimated total construction of a 1200 km fiber optic cable linking remote communities throughout Northern Alberta, BC, Yukon, NWT and Alaska. KTC will invest in eight Networking Operating Centers (NOC) with attached environmentally friendly data centers to bring state of the art transport and cloud-based services.

KatloTech Communications has done its due diligence and the return on investment is significant, as there are no other true wholesale broadband providers or cloud-based services operating in Canada's NWT. This compelling service model will generate revenues for the life of the infrastructure and create healthy competition in the North and potentially throughout Canada.

KatloTech Communications has already gained letters of support from various industry technology companies such as Microsoft Canada, Quintillion Arctic Fiber, Forrest Green RMC,

TVC Canada, Bluetown, One Nation Networks, and City of Yellowknife and various northern indigenous communities.

KatloTech is currently working with financial investors to launch this amazing lucrative and innovative venture.
