Referring Veterinarian: Dr. Tony Wright

Referring Clinic: Cahaba Valley Animal Clinic

Phone: (205) 980-0078

Client: KYRA HAGAN

Phone: (205) 529-3480

Patient: DIANA, 1 Yrs. 2 Mos., Female, Maine Coon

Dear Dr. Wright,

Chief Complaint: To establish a baseline echocardiogram; pre-breeding echocardiogram

Diagnosis: NORMAL ECHOCARDIOGRAM

DIANA presented on Thursday, November 16, 2023 for an initial consultation. The chief complaint was to establish a baseline echocardiogram.

Upon physical examination, body condition and hydration were normal. Mucous membranes were pink with a CRT of <2 seconds. An ophthalmic exam showed both eyes to be within normal limits. The oral examination was within normal limits. The otic examination was within normal limits. A nasal examination was within normal limits. The cervical examination was within normal limits. A normal sinus rhythm was auscultated and no pulse deficits were palpated. Normal bronchovesicular lung sounds were auscultated. No pain or masses were palpated in the abdomen. No lymph node enlargements were noted. Integumental, musculoskeletal and neurological examination findings were all normal at this time.

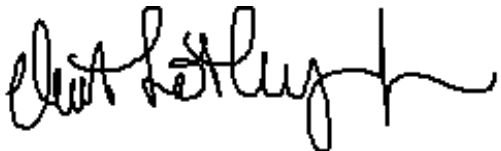

Today we performed an echocardiogram. The echocardiogram showed normal left ventricular and left atrial measurements with a normal contractility. There is no evidence of Hypertrophic Cardiomyopathy at this time.

There are no medications indicated at this time. I am recommending to recheck Diana in 1 year or sooner if there is a problem.

Thank you very much for the referral of DIANA HAGAN.

Please do not hesitate to contact us if we can be of assistance with this or any other case in the future.

Respectfully,

Clinton D. Lothrop Jr, DVM, PH.D, DACVIM
