Tuesday, October 17, 2023

Attending Clinician: Clinton D. Lothrop Jr, DVM, PH.D, DACVIM

Referring Veterinarian: Dr. Tony Wright

Referring Clinic: Cahaba Valley Animal Clinic

Phone: (205) 980-0078

Client: KYRA HAGAN

Phone: (205) 529-3480

Patient: OSCAR, 1 Yrs. 5 Mos., Male, Maine Coon

Dear Dr. Wright,

Chief Complaint: OSCAR is here today to screen for heart disease. He is acting normal at home and eating well with no episodes of vomiting, diarrhea or syncope.

Diagnosis: **NORMAL ECHOCARDIOGRAM**

OSCAR presented on Tuesday, October 12, 2023 for an initial consultation. The chief complaint was an echocardiogram to screen for heart disease. The previous CBC/Chemistry profile was within normal limits. The previous MYBPC3 gene test is normal.

Upon physical examination, body condition and hydration were normal. Mucous membranes were pink with a CRT of <2 seconds. An ophthalmic exam showed both eyes to be within normal limits. The oral examination was within normal limits. The otic examination was within normal limits. A nasal examination was within normal limits. The cervical examination was within normal limits. A normal sinus rhythm was auscultated and no pulse deficits were palpated. Normal bronchovesicular lung sounds were auscultated. No pain or masses were palpated in the abdomen. No lymph node enlargements were noted. Integumental, musculoskeletal and neurological examination findings were all normal at this time.

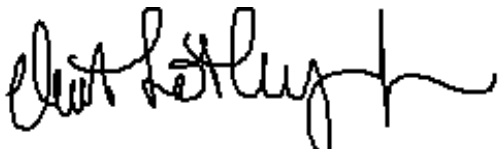

Today we performed an echocardiogram, which was within normal limits. The left ventricular and left atrial measurements were within normal range. The contractility was normal and there was no structural or genetic evidence of inherited cardiomyopathy.

No medications or treatments are indicated at this time.

Thank you very much for the referral of OSCAR HAGAN.

Please do not hesitate to contact us if we can be of assistance with this or any other case in the future.

Respectfully,

Clinton D. Lothrop Jr, DVM, PH.D, DACVIM
