

D-1280x

Diesel and Gasoline Fuel

PROBLEM: Fuel is a corrosive destroying the very engine it powers!

SOLUTION: Omstar D-1280x reformulates gasoline or diesel fuel, which causes two important benefits:

(1) D-1280x adds lubrication properties to the engine's oil which prevents the metals in your engine from wearing as quickly. This lengthens the life of your engine.

All internal components benefit from the cleansing and lubricating action; including the fuel tanks, fuel lines, filters, carburetors, spark plugs, injectors, combustion chambers, and exhaust system.

Omstar D-1280x also conditions the engine seals, keeping them tighter longer. A cleaner, more lubricated engine runs more efficiently, requires less maintenance, and reduces engine heat significantly.

(2) D-1280X maximizes fuel combustibility and causes a measurable reduction in the emissions of hydrocarbons (HC), nitrogen oxides (NOx), carbon monoxide (CO), carbon dioxide (CO₂), particulate matter (PM) and other harmful products of combustion. However, the emission of oxygen (O₂) is significantly increased, which is good for the environment.

USAGE: Add D-1280x to the fuel tank for engines of gasoline or diesels trucks/buses, generators, power plants, ships....anything that burns fuel.

Also, add to crankcase or oil reservoir in any engine for extra bottom-end lubrication.

Omstar D-1280x is a non-hazardous product that is free of carcinogens. D-1280x is a secret formula composed only of esters (carbon, hydrogen and oxygen) and a base of mineral oil. It is 99.99976% clean and ashless upon combustion. D-1280x is safe to handle and is non-toxic.
