

Assets learn to speak

## Pure I/O – “I hear voices...”

## Reliability Centered Maintenance

Foundational Asset reliability starts with RCM

- What are your critical Assets?
- What are their potential failures?
- What's the maintenance strategy that supports elimination of identified failures?
- PM's become a standardized practice along with hope of others doing their part

## Condition Based Management

Takes the foundational RCM and moves it into action; streamlines it, too!

- What are the protective actions prescribed from the RCM?
- PM's converted into actionable routines.
- Automate prescription into your assets.
- Human involvement from the Asset's point of view.
- Allow your assets the voice they so desperately need.

## Process Management

The execution of an engineered plan

- Defined expectations
- Codes of Conduct
- Methodology

## Three Tiers of Advancement

- Human performance - Inspect the Expected
- Asset Performance - Assets Self-Report
- Compliance adherence - Know the Unknown
