

Where are you getting Living Wall Information? ..... **Is it from a vendor?**

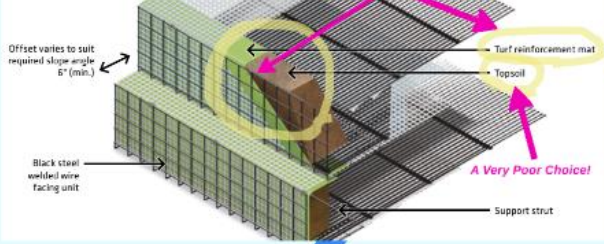

**Have your projects been successful and met your expectations?**

If not, wouldn't it be great to get trusted advice and guidance from a subject matter expert .... **Not selling you a product?**

This is a sample of the kind of information provided by Greenwall Ventures to its clients.

Information to yield successful specification, execution in the field and delivery of living walls that actually "live".

# Not all living walls end up "alive" -- why?

What is needed to provide long-term plant health and ensure the facing is covered in healthy plants?

How is that goal achieved?

Most systems are designed for structure with no thought going into plant culture and long-term plant health.

Successful "living" systems must answer these questions:

- What is the media in the face?
- How does it get in there?
- How does it stay there?
- How much of it is in there?
- How do plants grow in it or through it?

Greenwall Ventures is well versed in all types of Living Walls and Slopes.

- Structural Living Walls
- Retaining Living Walls
- Vertical Living Walls
- Vertical Gardens
- Vertical Farms
- Wire Faced Living Walls
- Geogrid Wrapped Living Walls

Fact number one:

Most systems are designed for structure with no thought going into plant culture and long-term plant health.

## This is just the beginning of the answer:

***Successful "living" systems must answer these questions:***

- ***What is the media in the face?***
- ***How does it get in there?***
- ***How does it stay there?***
- ***How much of it is in there?***
- ***How do plants grow in it or through it?***
- ***Can irrigation be added easily?***
