Better by design...

We specialise in making homes more secure and more beautiful and achieve this by using expert manufacturing partners and installers to fit British-made PVCu windows and doors of an exceptional standard.

Thanks to our expertise, replacing windows and doors means a significant upgrade for your home. Our products put the elegance into energy efficiency, the style into security and a lifetime of enjoyment into high performance.

So whether you're looking for more of a wow factor, more security or to add more value to your home, we'll help you achieve your aims. The products we install are high quality, thoroughly tested and trusted by homeowners across the UK. We're also a brand of profine Group, one of the world's largest designers of window and door systems with a reputation for innovation and sustainability.

Read on and find out how we can add warmth, style and ultimate security to your home.

- 1 Manufactured using an exclusive lead-free, calcium zinc based compound.
- 2 5 chambered outer frame and 7 chamber window sash for enhanced energy efficiency values of 1.2 (W/m2K) as standard.
- 3 High proportion of recycled material, better for the environment.
- 4 Chamfered sash and glazing bead for traditional timber effect product detailing.
- 5 Use of high-performance gaskets and seals for lasting product performance.
- 6 Part of an integrated window system including residential, French and patio doors.

2 Improved energy efficiency

Save money and help save the planet.

Turn your house into an energy efficient and cost effective home, by installing the best in PVCu windows and doors. We can help you to reduce your carbon footprint and your energy bills.

Our products are packed full of clever design features like plastic thermal inserts made from 100% recycled material to keep in more heat, to advanced glass that can capture free heat from the sun through solar gain. Our products are also designed so that they can be collected and recycled back into new PVCu products.

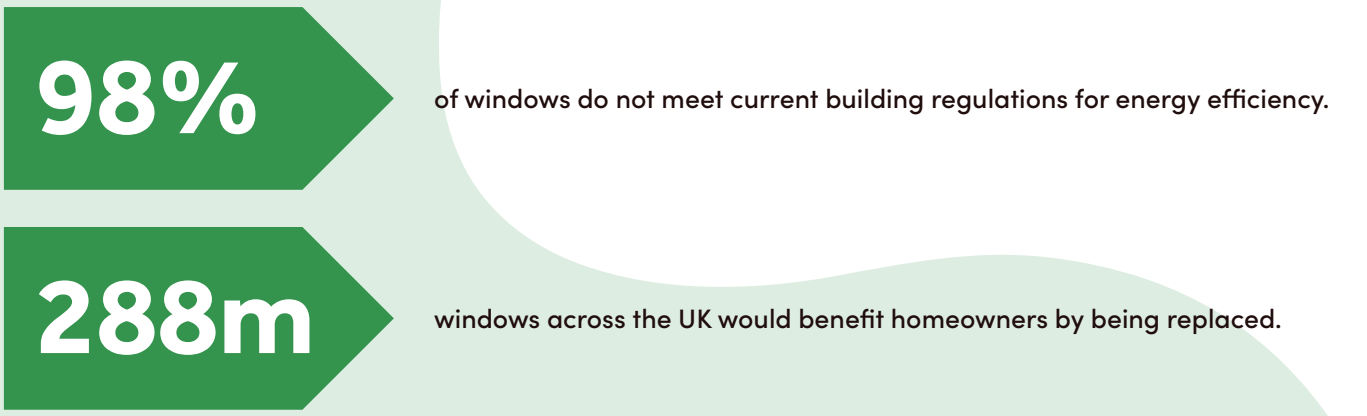

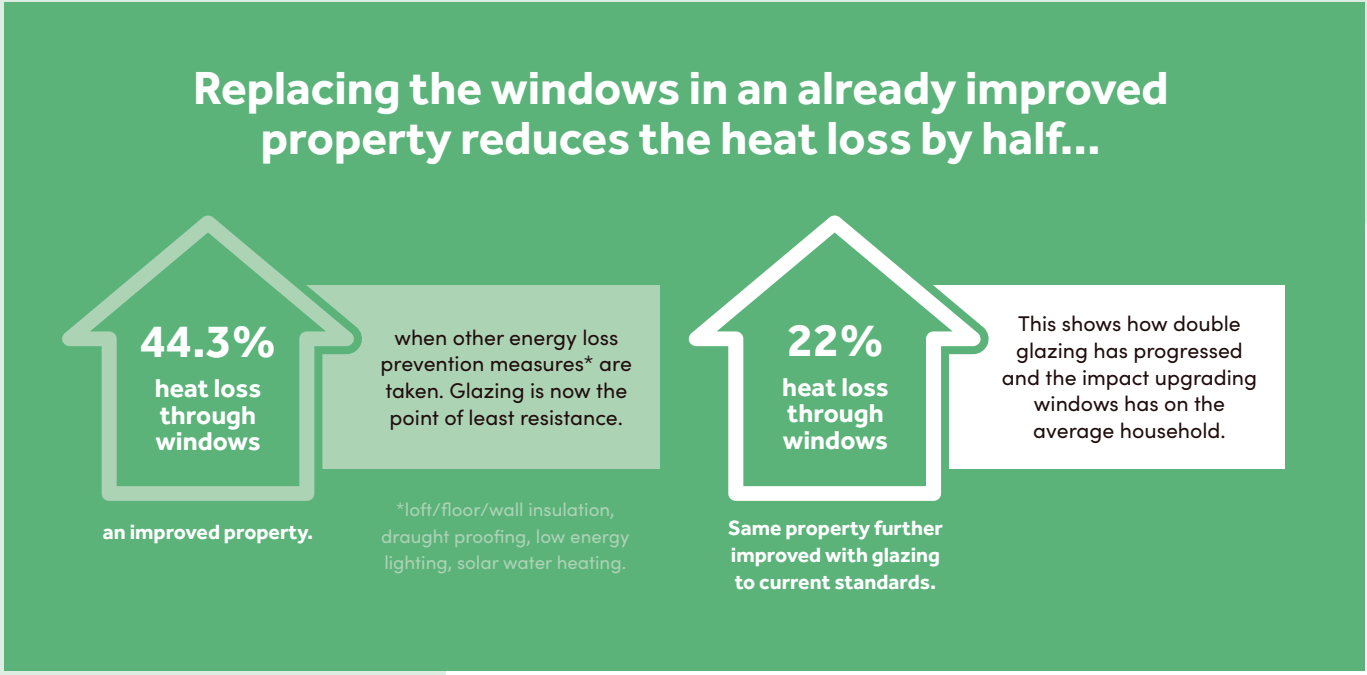

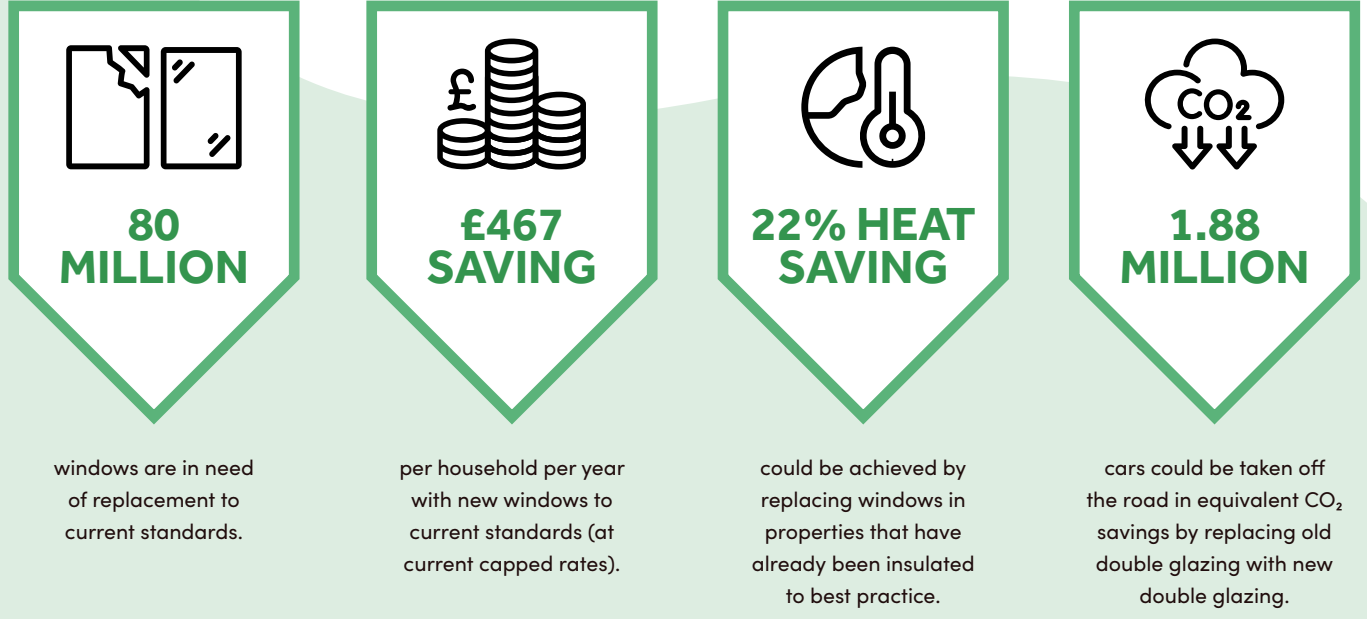

Rising energy costs and extremes in weather: we're helping to address these important issues in your home.

Our windows include non-visible recycled PVCu window content, such as the reinforcement bars that are fitted inside the opening frame profiles to provide extra strength and thermal efficiency.

Unlike other options out there, our PVCu windows can be recycled up to 10 times with a total lifespan of 400 years!

The facts...

Enhanced security

Secure your home, your belongings and your family.

Our windows and doors come with the latest high-performance multi-point locking technology, meaning you can rest assured that you're keeping your home and family well protected. We're committed to finding the right security solution for your needs and those of your loved ones.

Keeping windows locked at all times should be a given and the same said for all external doors. It's also worth upgrading door cylinders to the latest 3 star, anti-pick, drill and bump standard where the leading lock manufacturers offer a security guarantee.

For just a few £'s extra the added security and peace of mind is an investment worth taking and these cylinder locks are usually tested by the Master Locksmiths Association.

“ Did you know that there are around 900 homes broken into through the door every day? ”

Investing in high security windows and doors is a pro-active deterrent to would be intruders.

Home security

As well as investing in new windows and doors, there are other things you can do to help make your home and garden more secure. Visit [homesecuritymonth.com](https://www.homesecuritymonth.com), find out more and take the quiz!

Window security

Enhanced window security comes as standard with a Greenline window, but carefully consider the security upgrades available from your Greenline professional installer.

Door security

Multi-point locks, along with anti-bump, pick and drill cylinders all help to make your home more secure. Consider the enhanced security options for your front, French and patio doors too.

Every window and door opening is different, as is the room into which Greenline windows and doors are installed across the UK. Take time to think of colours, which side the windows and doors open and whether you'd even like a change in design.

Your local installer partner can also advise you of security upgrades, product enhancements such as heritage and Georgian bars and what colours would best suit your property inside and out. Make Greenline a perfect investment.

Many homes, thousands of ideas...

Whatever your property type or location there's a perfect Greenline window and door for you. Each one is carefully manufactured to the highest standards and installed with great care and expertise.

New openings for doors

Whatever the type of door you're aspiring to, there's likely to be one available with the Greenline name on it.

This is a sign of quality, clever product design and our experience in PVCu windows and doors that goes back to the 1960's. A bespoke front entrance door, back door, double / French doors and also a patio door are available in the Greenline system, each one packed with strong security and performance credentials.

Residential doors

Most PVCu doors are either a panel design or a modern composite using different materials that help replicate the appearance of traditional timber or in some cases even premium aluminium doors. Multi-point locks and the upgrade options to 3 star cylinders are important security feature upgrades too.

French doors

These are designed to provide a perfect opening to the rear of a home and can be manufacture with side lights where space permits helping to create complete symmetry once installed. Colours, security features and handle options make it a great investment in any home.

Patio doors

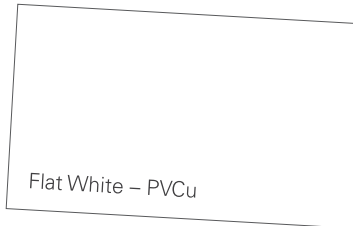

These help maximise light and provide a feeling of space. Multi point locking adds to the security features and there are a wide range of finishes for both the door and handles. A dedicated running track also helps to provide many years of lasting and effortless performance.

Inspiring colours and finishes...

Originally the replacement window and door market was dominated by flat white, yet today over 40% of windows and doors are installed with a rich colour or life like woodgrain finish. Consider property type, décor and any future changes your likely to make in your home prior to selection.

These colours and woodgrains are available as standard out of a range of over 40 available on a short lead time.

Ask your installer partner for a colour swatch and you can then use it around your home inside and out prior to your final selection. Our installer partners can also offer considerable advice too if you're struggling to decide!

Recycling and sustainability

We're a green business across the profine Group and that includes our important Greenline brand.

The Greenline window and door system is designed according to green principles that underpin the profine Group brand. Cleverly designed product functionality, outstanding levels of energy efficiency, strong sound reduction characteristics and the best possible use of materials reflect our business ethos.

As little as possible and as much as necessary is the best motto for sustainable environmental protection. This is the only way to conserve valuable natural resources, after all we owe to the future generations to come. Our recycling initiative here in the UK also demonstrates this commitment to climate change.

“ Greenline PVCu windows and doors can be recycled up to 10 times with a total lifespan of up to 400 years! ”

We recycle old PVCu windows in the UK at our dedicated facility in North West England. They then go back in to our Greenline PVCu profiles for re-processing.
