Phone Ownership

Population Level Coverage

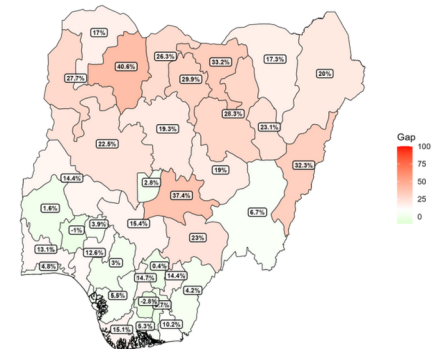

National Household Coverage

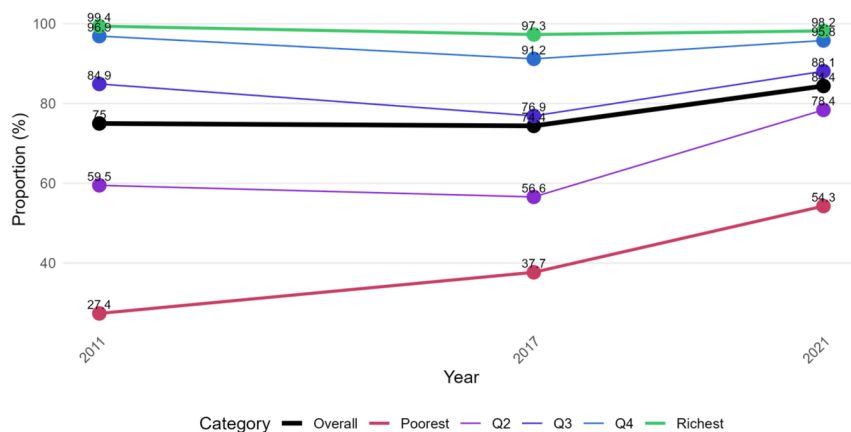

National Women Coverage

Coverage Gap = Men v Women

Longitudinal analysis across household coverage in past available surveys

- UNICEF's MICS survey first began to include questions on phone ownership as part of MICS-4 was published in 2011 for Nigeria. This survey contained question of phone ownership only at a household level
- From 2011, to the most recent MICS-6 survey in 2021, there has been a 10% overall increase in phone ownership across the population.
- Differences in phone ownership persist by sociodemographic characteristics. Across wealth quintiles, from 2011 to 2021, phone ownership decreased marginally by 0.5% amongst the wealthiest and increased 27% over the same time period amongst the poorest.

Digital Skills

Coverage Overview

Limitations of Currently Available Data

Create an electronic presentation v. Education

Use arithmetic formula in spreadsheet v. Edu

Use arithmetic formula in spreadsheet v. Wealth

- There are significant inconsistencies in the data for some of the digital skills questions. As seen in the the above visualizations we see a higher proportion of participants with no education reported creating electronic presentation that those with higher education. Similar inconsistency is seen in participants reporting use of arithmetic formulas in spreadsheets.
- Another limitation of this data is that digital skills information was recorded for a relatively small sample size (Roughly 6% of the surveyed population).
