

EYELASH EXTENSION AFTER CARE INSTRUCTIONS

During the **initial 24 hours** after your appointment:

- Do not get your lashes wet for 24 hours after each application. This affects the strength of the adhesive bond. Do not use the foaming cleanser on your lash line for 24 hours. After the first day, **daily cleansing is a must.**
- Be sure to wait 5-10 minutes after wetting extensions before brushing through them, since the hair follicle is susceptible to breakage when wet.
- Avoid steam, hot showers, facials, saunas, and swimming pools.
- Do not use the spa, tanning bed or overexert yourself. The adhesive bond needs this time to fully cure without corrupting interactions. Spray tanning is allowed, since eyes are shielded.

Taking care of your Eyelash Extensions:

- Avoid rubbing your eyes, petting, picking or pulling your lash extensions. Certain seasons may cause more allergies and shedding and may require more frequent maintenance appointments during these times.
- Do not use an eyelash curler while wearing eyelash extensions. Heated eyelash curlers are safe, but unnecessary.
- Proper hygiene is one of the most important steps in maintaining your extensions. Please wash your lashes daily with an eyelash extension safe foaming cleanser.
- All products used around the eye area should be oil-free. Any oil-based product (mascara, eyeliner, eyeshadow, eye cream, medication, ointment, salve, concealer, foundation, etc.) near the eye area will break down the adhesive.
- Use caution when applying creams and moisturizers around the eye area. Apply these products one hour before bedtime. Blot away excess moisture before closing your eyes for the night.
- We recommend sleeping on your back if possible. A small (travel, neck, etc.) pillow helps to prevent sleeping on lashes.
- Avoid water-proof eye makeup. This will make cleansing the lashes very difficult and may cause excess shedding.
- After showering, please wait 5 -10 minutes for your extensions to dry before brushing. Brush them gently with a clean and dry mascara wand.
- Please no mascara! It's very hard to remove, breaks down adhesive from previous application, and interferes with bond of next application. Please arrive without eye makeup, which will interfere with proper bonding and may cause retention issues.
- We recommend regular fill appointments every 2-3 weeks to maintain desired fullness. If you wait more than 4 weeks to get a refill/ fill/ touch-up, a full set will be required at the current price.
- If you have any concerns or questions about unusual symptoms, please contact us immediately at 817-889-7233 or consult a physician.
