

Dogwood Racing Mounting Bracket For Catalyst Pro Street Tank

*****NOT FOR USE WITH TANK TOPS OR SHELLS*****

- Bracket **MUST** be used in conjunction with modified under tank brackets and pads. Tank should rest on pads when installed.

- Mount the angled end of the bracket to the rear of the Catalyst tank. Use the two holes in the bracket to mark where to drill. Start with a 1/8 pilot bit, then drill to size.
- Install the bracket on top of the tank using the supplied 6mm fasteners and rubber washer. Use the rubber washer **between the bracket and the fiberglass**, then the washer and locknut underneath the fiberglass.
- Install the tank bracket to the OEM crossbar, or Dogwood Racing Seat Brace, using the supplied 6mm fasteners. Notice the slot on the underside of the bracket fits around the rivet nuts on the brace.
- Dogwood Racing sells long and short brackets. Short brackets mount to the front lugs on the subframe, and the long bracket mounts to the rear lugs.
- Periodically inspect all fasteners and brackets as well as your overall fuel system.

For off road use only. Dogwood Racing, it's owners or managers, are not responsible for any damage or injury caused by the use of this product.
