# COMPANY PROFILE

## DIGIPRINT

Full colour digitally printed patches are created by printing graphics directly onto specially engineered fabrics designed for producing the highest quality of emblems with complex designs.

## DIGIPRINT X SATIN BORDER

This decoration method can be created with any of our fabrics except for FA. Using our printing method for Digiprint, we are able to combine it with a full merrow border to give it an embroidered look while achieving fine details and even gradients in your logo.

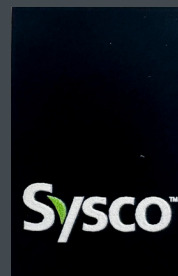

## DIGIPRINT STOCK TWILL & FLOCK

We carry a variety of stock twill colours and flock material which we can digitally print vibrant and detailed designs. These patches are created by using pigmented ink printing process producing the highest quality of emblems with complex designs.

## CLIP LABELS

Clip Labels are perfect for customizing any type of apparel. We are able to produce these clip labels in any of our fabrics, faux suede, faux leather, stock twill and Digi 3D.

## DIGI 3D & GLOW IN THE DARK

Using the latest printing technology, our team can easily recreate any design with 3D texture. This adds a whole new look and feel to any logo. Elevate your brand with texturing and elegant finishing with eye catching colours and details.

## DIGISTITCH HYBRID

These emblems and patches are a combination of our famous DIGIPRINT and Embroidered Patches. Certain portions of the logo can be embroidered to give a 3D look and texture.

## EMBROIDERED PATCHES

These patches give a high-quality look achieved from direct embroidery without using the traditional direct embroidery method. Embroidered patches are timeless and have a very classic look.

## HIVIS & PRINTED REFLECTIVE

Made from materials that are certified for use in industrial safety applications. High visibility patches are fluorescent for higher frequency under light, & reflective patches are printed in full colour being able to achieve any design that is required.

## FABRIC X SILICONE & DOUBLE LAYER FABRIC

This is a combination of our traditional Digiprint and stock silicone/flock. We combine eco-friendly silicone, polyurethane, or flock with high quality fabrics to achieve depth for your logo. This decoration method is best for text only logos or logo with simple designs.

## SPECIALTY STOCK TRANSFERS

Using high quality reflective, silicone, and flock materials, these transfers add a unique feature to your design.

## FAUX LEATHER, SUEDE & GENUINE CORK

Using digital printing methods, we can easily achieve high quality detail and vibrant colours on faux leather and genuine cork. In addition, we also laser etch these materials to gain varying depth to gain a unique look.

## 2 LAYER SILICONE

Our two-colour patches can easily achieve high detail and intricacy. They are light weight and are perfect for any type of apparel. Two colour silicone patches come in many stock colours, but the top colour is always black OR white. This material is best suited for two colour logos.
