

AUTO - RESIDENTIAL - COMMERCIAL

WHAT DOES MY WINDSHIELD HAVE IN IT CHECK LIST?

Heated Wiper Area

This area can be seen on some windshields on the outside, there may be orange or faint grey lines on the bottom of your windshield or just above the black area.

Rain Sensor

If you have a rain sensor you may notice your wiper blades will activate without you engaging them. Viewed from the outside you will see near the rear view mirror a window or discolored area approx. 1" round or square. Inside you will see a plastic housing covering.

Humidity / Condensation Sensor

If your windshield has this option it is only visible from the interior of the vehicle, it will be located on either side of the rear-view mirror and should be a stand-alone device. Approx. 2" wide and can extend to the top of the headliner.

Lane Departure Warning / Forward Collision Alert System

This feature will be located by your rear-view mirror, look for a clear window approx. 2" triangle which will be visible from the exterior of your windshield. This option may not be a working feature on your vehicle but is still required for proper fitting. Covering will be located inside.

There are more options than just these four, the checklist will help lead your-self and our techs in the right direction when ordering your windshield. Any question please stop by or call (306)446-2227. More information on feature you may see on your windshield can be found on our website.
