

### **Medically approved, Latest mattress disinfecting technology**

Firstly let us say that we all feel the strangeness of the current situation and hope that it passes relatively quickly for everyone's sake. **Please take a moment and read through the information below.**

We are proud to exclusively use the only TGA APPROVED, Australian designed and manufactured device that currently being used across the Globe to help prevent the spread of COVID-19 as well as health and safety of Australians.

That being said, we are aware that keeping your sleeping environment Hygiene during and after the QUARANTINE period is not an easy task. it is mandatory to make sure that cleaning is carried out in details and for that reason we are now offering the most reasonable packages for disinfecting and sanitising deep into your mattresses.

We specialised to carry out this specific procedure which is the only TGA approved and Medical Grade procedure that's available on the market to bring the peace of mind to those who are concerned about the hygiene of mattresses they will sleep on as well as those suffering from asthma or allergic to dustmites.

Your body is permanently shedding dead skin (that's everyone) and we lose a staggering 10 ounces of fluid each night. You will shed, dead skin, dried sweat, urine, faeces, saliva and other bodily fluids whilst sleeping in a bed which can easily travel into your mattress in a short period of time. So perhaps you can imagine what to expect after spending even more time in your bed due to the current situation even though your mattresses could be relatively New.

Therefore you may consider having your mattress cleaned and disinfected on regular basis, however some use chemicals or even steam clean machinery which is not recommended as they would basically push the water into the mattress which makes moisture and eventually creates more bacteria.

UV Sanitisation process is dry, chemical free and proven to be more efficient than any other process on the market & enables your mattress to be cleaner than the day it was purchased.

**CHEMICAL FREE**  
WATER & STEAM FREE  
**100% DRY PROCESS**

---

Step 1:

The commercial vacuum system is an essential part of the disinfection process. With the most efficient HEPA filtration system and a very powerful motorized vacuum head that pulsates and vibrates to loosen the mattress debris. Whilst carrying out the demonstration you are able to visibly see the dust and debris being collected in the cyclonic cylinder.

Step 2:

RemUVe™ has been designed, developed and manufactured to provide a superior outcome in a fast, chemical free and dry process.

Designed and developed in Australia, this innovative technology is being used to disinfect mattresses in Hospitals, Aged care Facilities and Hotels all over the world.

The medically certified and award-winning process doesn't require the mattress to be moved nor does it use chemicals, water, alcohol or steam. Plus, once the dust, debris, pathogens and associated smells are removed, the mattress can be used straight away.

### Step 3:

Our Stain and Odour Remover is packed with a blend of natural enzymes proven to be the safest and most effective way to tackle different stains. With a couple of sprays of our formula, you can easily remove stains, eliminate odours and leave your fabric fresh and clean.

As a chemical free product in most cases depending on what the cause of the stain and how long its been, our stain remover will effect differently and is not guaranteed to completely remove the color of the effected area.
