

RUNXIN MULTIPORT CONTROL VALVES

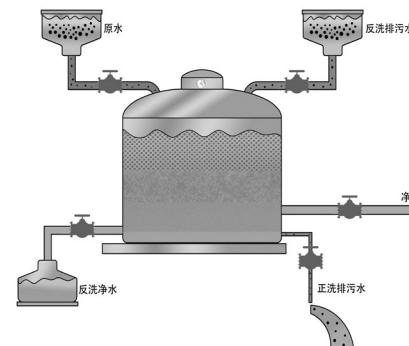

SPECIAL EDITION FOR
REDAWATERGROUP

WWW.REDAWATERGROUP.COM

VS

RUNXIN MULTIPORT CONTROL VALVES

Simple installation with less leak points

Integrate multiple valves into one valve, which make the connection easier and more efficient and significantly reduce leak risk .

TRADITIONAL PIPELINE SYSTEM

Complex connections and many leak points

5,7,11 and more valves pipe connections in filtering, softening and ion exchange systems cause hard installation many potential leak points.

Easy Maintenance

Fewer connections make maintenance easy and fast. Just replace the worn accessory of Runxin control valves, which can save more costs and increase efficiency.

Hard Maintenance

Multiple connections make the leak risk increase. Besides, the repair and maintenance will spend too many labor and downtime time costs.

Automatic Operation

Just set the process in advance, it can achieve automatic operation.

All-Manual Operation

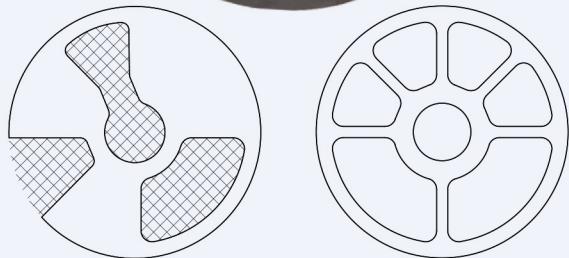

Manually operate many valves open and close will spend long time and easy to have internal water mixing.

Structure – Features

A

Hermetic Head Faces Construction

Because of good corrosion resistance, Runxin control valve has a very good application in Anion/Cation ion-exchange system.

Ceramic Moving Disk

- i. Ceramic Disk is sintered at 1680 °C.
- ii. Content : Al₂O₃ ≥ 95%
- iii. HRA≥85°, Flatness≤0.0003 mm, Parallelism≤0.015 mm
- iv. Acid and alkaline resistance: Ceramic has excellent stability against Inorganic acid and alkaline at normal temperature.

High Strength Synthetic Fixed Disk

- i. High Strength Synthetic material ensure the fixed disk resisting corrosion from many kinds acids and strong alkalines except hot concentrated Nitric acid.
- ii. The fixed disk is grinded to have same flatness as the ceramic moving disk to keep good and reliable sealing.
- iii. Hermetic head faces construction has better ability to prevent damage from foreign substance in the water.

Partly Balance Construction

For each softener valve, it adopts partly balance construction to prevent big torque as water pressure increasing.

B

Operate with Pressure

Runxin valve uses two high-flatness sealing disks closely located respectively. When switch the working positions, it could operate with pressure.

While some other valves which uses soft sealing element like rubber parts, it can't operate with pressure. It needs to shut off the inlet valve before switching.

C

No Hard Water Bypass Option

No Hard Water Bypass (NHWP) means the valve can internally prevent raw water from getting into service lines during regeneration.

All Runxin valves can shut off the passage to outlet during regeneration except Model: F79B, F82B, F92B.

D

Varieties of Specifications injector

The ratio of injector draw to total flow rate is around 25% to 35%. Each tank has a specific injector matched.

Working Principle

Using hermetic head faces theory, Runxin valve is designed to integrate multi-ports round closely to one valve body. When the rotor rotates, some ports will be shut off and meanwhile some other ports will be open, and thus the water will flow in and out this valve.

Construction

Runxin valve uses high-flatness moving disk and fixed disk to work as a valve. Fixed disk is fixed and moving disk is driven by handle or motor to rotate closely over fixed disk. There are several blind via and through-holes on fixed disk and moving disk, when moving disk stays on different positions of fixed disk, and then different flow passages will be formed:

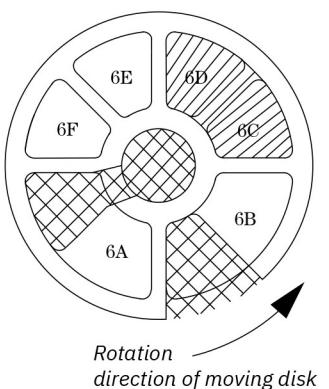

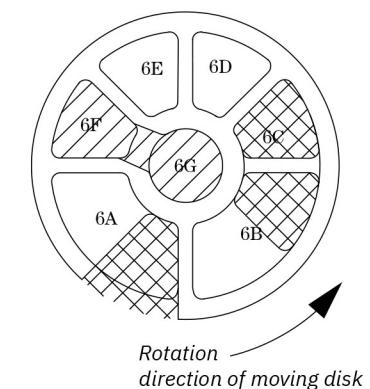

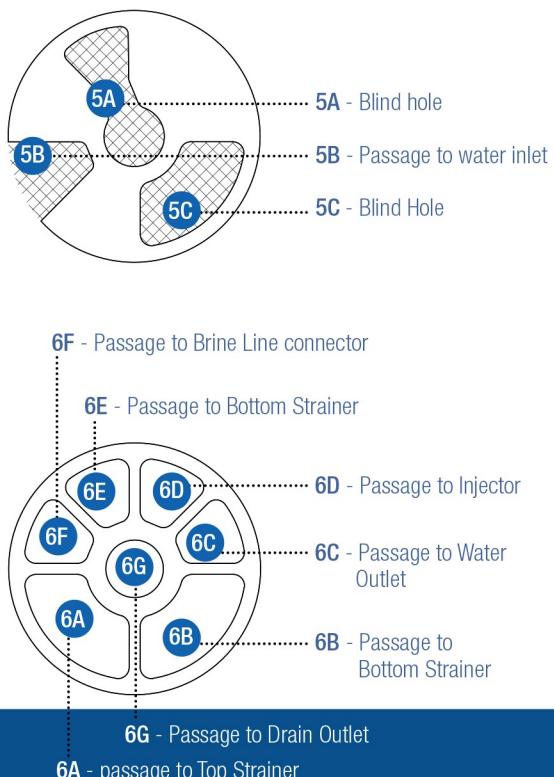

For softener valves

These positions are Service, Backwash, Brine & Slow Rinse, Brine Refill and Fast Rinse.

For Filter valve

It has 3 positions: Service, Backwash and Fast Rinse.

Here, we take the **F63** as example:

Service Position

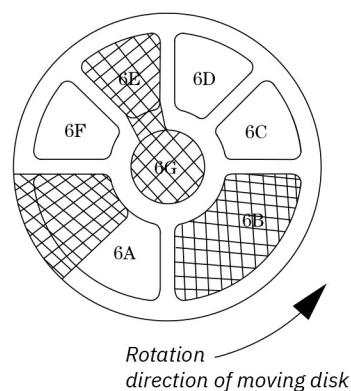

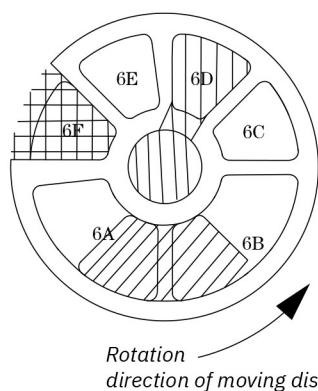

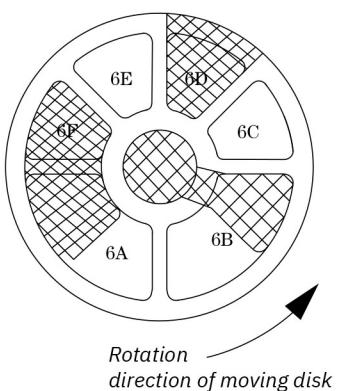

Backwash Position

Controller

Signal ➤ Controller ➤ Actuator ➤ Moving Disk ➤ Locating Device ➤ Controller

The controller gets signal from Timer, Meter or Water Quality Detecting Instrument, and then will initiate the motor to drive the actuator to rotate the moving disk, and when the moving disk rotates to the correct position, another signal will be sent to the controller through the locating device, and the controller will stop the moving disk until it finishes this step; When next new signal is received by the controller, the controller will drive the moving disk to rotate to a new position and so on until all steps are finished and cycled.

Water passes this part. No water passes this part. (Same as below)

Brine&Slow Rinse Position

Brine Refill Position

Fast Rinse Position

Applications & Industry

Runxin control valves (filter valves and softening valves) are core component during filtering and softening system. They are widely used in various fields to guarantee efficient and easier water treatment.

Filtering & Softening

Industrial Fields

Water filtering and softening for boiler, heat exchange equipment, cooling system and RO system.

Agriculture

Water filtering and softening for crops and flowers irrigation, livestock drinking, vegetables and fruits washing.

Residential

Water filtering and softening for drinking, bathing, cooking, as well as for electric boilers, water heaters, underfloor heating and other installations.

Commercial

Pre-filtering and softening of RO system for drinking and domestic use. It can be used for swimming pool filtering.

Process Water Treatment

Desalination (Pure and Ultra Pure Water)

Power station boiler make-up water, laboratory, electroplating plant, integrated circuit manufacturing, pharmaceutical preparations, biochemistry, drinking water, cosmetics and other fields.

Iron and manganese removal filtration

Remove extra iron and manganese content in underground water for domestic and industrial production use.

Deaeration

Deaeration for boiler water to prevent piping, water tank, and other metal components from oxygen corrosion.

Defluoridation

Remove excess fluorine in underground water to protect people from fluorosis.

Runxin Code System

Examples

For 53610 control valve

5 means filter valve, **3** means LED display automatic control, **6** means meter type, **10** means water treatment capacity is 10 m³/h
That is,

53610 means meter type automatic filter valve with water treatment capacity of 10 m³/h.

Special Application Control Valves

For code beginning with 1 are control valves for special applications, and for code beginning with 4 are spare parts. The meaning of the first two digits refers to the following chart.

For code beginning with 1

Code	11	13	15	17	18
Special Applications	Control valve for fluoride removal	Control valve for deaerator	Control valve for mixed bed system	Single valve with double tanks	Single valve with triple tanks

Control Valve Spare Parts

Code	41	42	43	44	45	46	47	48
Special Applications	Bypass Valve	Tee Valve	Brine Valve	Online Monitoring Device	Disk Filter	Controller	Disinfection Device	Salt Shortage Alarm Device

For 17610 control valve

17 means single valve with double tanks, **6** means meter type automatic softener valve,

10 means water treatment capacity is 10 m³/h,

That is,

17610 means single valve with double tanks, meter type automatic softener valve with water treatment capacity of 10 m³/h.

Manual Filter Control Valves

Structure & Performance Features

- Hermetic head faces structure.
- No hard water bypass and can operate with pressure.
- Manual regeneration. Handel could be rotated and assembled within 180°.

Applications

- Household Filter System (**F56A/F56E/F56F**).
- Activated carbon filter or sand filter system for RO pretreatment system.
- Swimming Pool Filter System (**N56D/F77BS**).
- **N56D/F77BS** can be used for Iron/Manganese Removal system if side mount adapter is installed upside down.

Automatic Filter Control Valves

Structure & Performance Features

- LED display, indication of long time power off and data saved after power off (Saved for three days).
- No hard water bypass in rising cycle.
- With signal output connector and two modes (b-01 or b-02) are optional.
- Can set rinsing frequency F-00, realizing one time service and several times of backwash and fast rinse.
- With remote control connector to receive passive signals.
- With interlock connector to realize service simultaneously and rinse one by one.
- Start rising by days or hours.
- **N77, F95 and F111** have two valve cores, one is for controlling inlet water, the other is for outlet water.
- Time clock type or meter type is optional.
- **N77/F95 with RS-485 port** are optional.

Applications

- Residential Filter System (**F71/F67**).
- Activated carbon filter or sand filter system for RO pretreatment system.

Manual Softening Control Valves

Structure & Performance Features

- Hermetic head faces structure.
- No hard water bypass and can operate with pressure.
- Start regeneration by manual, and handle can be rotated 360° cycle.
- F64BC, F64AC could be side-operated.

Applications

- Residential Softener System(**F64A/F64AC/F64B/F64BC**).
- Softener system for RO.
- Boiler softener system; ion exchange units.

Automatic Softening Control Valves

Structure & Performance Features

- LED display, long time power off indication and data will be saved for three days after power off.
- No hard water bypass in regeneration cycle (except F92 and F130).
- With signal output connector, remote handling connector which can receive passive signal.
- With interlock connector which can realize service simultaneously and regeneration one by one.
- N77, F95, F111 and F99 adopt ball valve for brine drawing and refill.
- Time clock regeneration option: by days or by hours; Meter valve regeneration option: Meter Delayed (A-01), Meter Immediate (A-02), Intelligent Meter Delayed (A-03), intelligent Meter Immediate (A-04).
- Up-flow control valve can set interval backwash times F-00, which can realize several times service and one time backwash.
- N77, F95 and F111 have two valve cores, one is for controlling inlet water and brine drawing, another is for outlet water.
- N77 and F95 with RS-485 port are optional.

Applications

- Residential Softener Systems (**F63/F65/F68/F69**).
- Softener for RO pretreatment System.
- Boiler Softening System, Ion exchange system.

Notes

- The model with a "S" means the valve with manual operation function.
- N77,F95,F111 brine refilled while service, brine refilling controlled by electronic ball valve.
- F63, F65, F68 and F69 have a variety of appearances optional.
- N74B is optional which can be top or side-mounted.

Continuous Water Supply Control Valves

One in Service One Standby – One Valve on Duplex Tank

To satisfy markets continuous water supply requirements, Runxin develop the first control valve, which can control two tanks one time to achieve one in service and one standby and guarantee continuous water supply.

This system contains one control valve and two tanks, it can achieve downflow or upflow regeneration through switch program. Besides, it adopts top or side mount method according to different output and tank structure.

This structure can achieve max. output 3.5 m³/h, 6 m³/h, 10 m³/h.

Technical Performance

Item		Requirements
Working Condition	Water Pressure	0.2–0.6 MPa
	Water Temperature	5–50 °C
Working Environment	Environment Temperature	5–50 °C
	Relative Humidity	≤95% (25 °C)
	Electrical Facility	AC 100V – 240V / 50–60 Hz
Inlet Water Quality	Water Turbidity	Upflow regeneration < 2FTU Downflow regeneration < 5FTU
	Water Hardness	First Grade Na+: 93610/93606 < 15 mmol/L 17610/17606 < 6.5 mmol/L
	Free Chlorine	< 0.1 mg/L
	Iron ²⁺	< 0.3 mg/L
	CODMn	< 2 mg/L (O ₂)

Notes

- First grade Na refers to First grade NA ion exchanger
- When the turbidity exceeds the working condition, a filter should be installed on the inlet of control valves.
- When the water hardness exceeds the working condition, the hardness of treated water can not meet the needed requirements (for example 0.03 mmol/L for boil water), you should adopt secondary softening.

17603	17603 (F73)	17606 (F98A)	17606T (F137)	17610 (F88A)	17610T (F135A)

One in Service One Standby – Two Valve and Two Tank

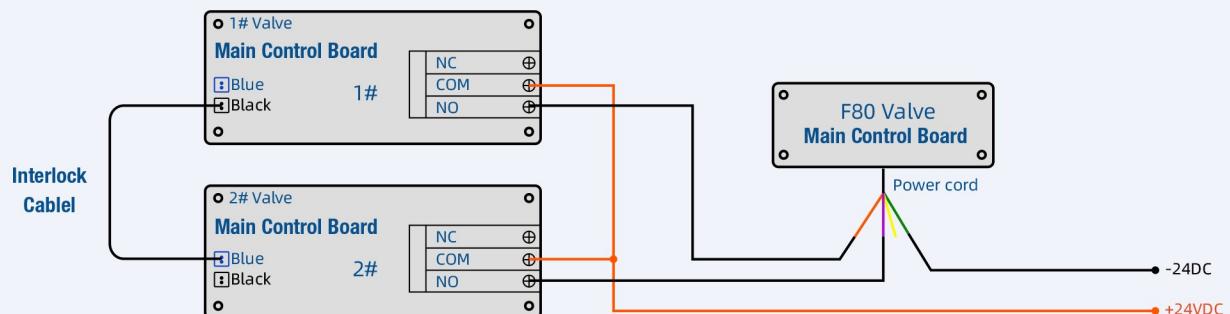

5–6 m³/h

- Suitable for 5-6 m³/h Continuous Water Supplying
- Two F92A3/F130A3 and DN25 Three-way Electronic Ball Valve (Four Core Plug)
- Two F92A3/F130A3 are interlocked as one system, and set C-02 (a connection for one in service one standby softening system)

10–20 m³/h

- Suitable for 10-20 m³/h Continuous Water Supplying
- Two N74A3/F99A3/N77A3/F95A3/F111A3 and F80
- Two valves are interlocked as one system, and set the system to A-02 and b-01; Connect the signal output connector with the control wire of F80.
- When the flow of working valve reduces to 0, the control valve regenerates F80 switches by the signal outlet connector controlling, the other valve turns to service.
- If the other valve is in regeneration, because of the function of interlock, the working valve still in service.

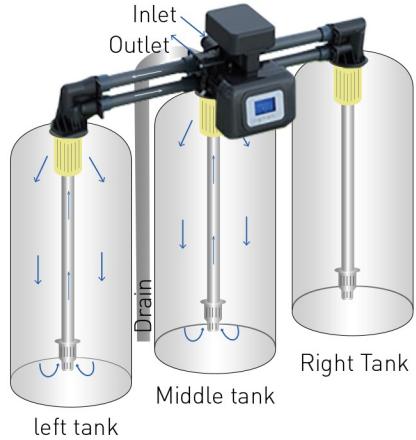

40–50 m³/h

- Suitable for 40–50 m³/h Continuous Water Supplying
- Two F112A3/F96A3 and Two DN25 Electronic Ball Valves
- Two valves are connected to signal line of one in service and one standby system (interlock wire), and set the system to C-02 (One in Service One Standby System).
- Ordinary F112A3/F96A3 needs to replace brine draw copper tube and install DN25 ball valve with it.
- Continuous water supplying, one valve in service, the other valve standby.

Two in Service One Standby

- One valve controls three tanks, two tanks supply with softened water in series, the other tank standby to achieve water supply continuously.
- When service finishes, the first grade in series turns to regenerate, the second grade turns to the first grade and supplies with softened water together with the standby tank as the second grade in series, which greatly improves the resin efficiency, saves water and salt.
- Regeneration tank keeps standby after switch and starts fast rinse before service.
- Only need one brine tank.
- It adopts hermetic head faces structure with ceramic sealing, reliable and duration.
- Up-flow or down-flow regeneration is optional by program.
- Raw water or softened water for regeneration is optional by changing the moving disk.
- Remove one tank to make the system as one in service one standby system.
- There is always two tanks in service in series which could treat the raw water with high hardness. It has backwash function, which could be used in high turbidity application which floating bed system can't be used.
- Suitable for treat high hardness water and continuous water supplying application

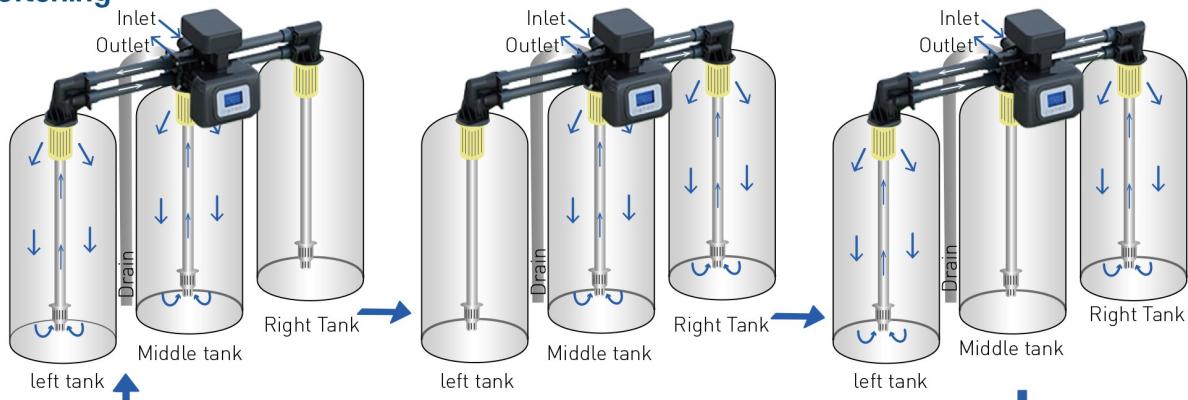

Model	18604A (F118A) 18604B (F118B)	18601B (F120B)

P Series

Structure & Performance Features

- Locate by optocoupler, more stable performance. F63P, F67P and F68P adopt the same locating board, while F65P, F69P and F71P use the same locating board. They all use the same main control board.
- Hermetic head faces structure, no hard water bypass during regeneration cycle.
- When power on, program run one cycle then locate at the previous position.
- Cheaper and simpler.
- Indicator display

Floating Bed

Structure & Performance Features

- Hermetic head faces structure (F112 has piston structure)
- For F88, F98 valve, one valve on twin tanks, one in service, the other standby.
- F83, F77CS and F112CS adopt hard water for regeneration, others adopt soft water for regeneration.
- Adopt the working process: up-flow service – brine draw – brine refill – fast rinse.
- Suitable for high hardness (less than 15 mmol/L) water treatment applications.

Residential D Series

Structure & Performance Features

- LCD display, intuitional and convenient.
- Indication of long time power off, data saved after power off (saved for three days.)
- Up-flow valve can set interval backwash times F-00, which can realize several times service and one time backwash.
- Downflow or Upflow option can be set in the program, and also can mix hard water to the system if required not too soft water.
- With disinfection connector which can be connected with disinfection device to electrolyze brine during regeneration to disinfect.
- D series valve has foreground and background modes to prevent incorrect operation.
- F105 and F97 use soft water for brine refilling, both UF and DF option, have vacation mode and dry brine mode.
- F105 and F79 has the leakage protection function; F105 has the function of proportionally brine draw and brine refill based on the percentage of real capacity

Application

- Residential Softener or the Whole House Water Softener.
- RO Pre-treatment Softener.

*Note: A: No raw water passes valve when regeneration; B:With raw water passes valve when regeneration.

Special Application Control Valves

F107&F107C

Iron-Manganese Removal Device

It is composed of aeration device and multiport control valves. The device adopts impeller stirring plus dropping create aeration process.

And automatic air release valve constantly drain off the air and carbon dioxide in water.

Combining with automatic filter control valves, this device can help to remove the iron or manganese from the water which has a big containing, as a pre-treatment device before industrial softening system or demineralization system.

Model	F107	F107C
Water Capacity	2 m³/h	10 m³/h
Outlet Water Iron Content	Iron content < 0.3 mg/L	Iron content < 0.3 mg/L
Outlet Water Manganese Content	< 0.1 mg/L	< 0.1 mg/L
Outlet Water Turbidity	< 5 mg/L	< 5 mg/L
Inlet Water Iron Content	Iron content < 20 mg/L	Iron content < 20 mg/L
Inlet Water Manganese Content	< 3 mg/L	< 3 mg/L
Inlet Water Turbidity	< 15 mg/L	< 15 mg/L
Alkalinity	< 2 mg/L	< 2 mg/L
pH Value	6.8–9	6.8–9
Water Temperature	6–10 °C	6–10 °C

Control Valve for Achieving One Valve on Duplex Tanks and Working in Series

- Patented design: one valve on duplex tanks, working in series;
- Under 0.1 MPa pressure drop, the flow rate is 4 m³/h;
- Filter + softening duplex tanks work in series system;
- Ozone + filter duplex tanks for iron and manganese removal system works in series;
- Duplex tanks softener system works in series;
- Three or more tanks can be realized in series.
