

STORAGE BLOK

SELF-STORAGE CONVERSION

CREATING NEW, COST EFFECTIVE, RENTABLE STORAGE UNITS FROM VACANT RETAIL SPACES

StorageBlok offers a complete array of services for self storage interior conversions and self storage construction projects. We design and install complete projects, including high quality, attractive, cost-effective hallway systems, interior panel systems, swing doors, and roll-up doors.

Urban markets have been the target of self storage construction often referred to as a conversion. Self storage developers can utilize existing vacant buildings for mini storage construction.

As far as self storage construction goes, a conversion is the least expensive way to build, and the fastest way to get into the self storage business. A conversion provides internal spaces, or, self storage that is inconvenient, because it is not easily accessed, unlike drive-up self storage buildings.

Most conversions involve multi-level storage construction or steel mezzanines with integrated mini storage construction. Conversions are a perfect fit for pre-engineered steel structures, providing flexibility and fast construction. Self storage construction developers value the ability to “phase in” the construction of the self storage units, reducing vacancies.
