

OUR PROCESS

1 Consultation

We begin with a private, in-home consultation (\$400) to understand your goals, vision, + desired scope for your project. Together, we define priorities, investment, and timeline so we're aligned from the beginning.

2 Concept Development

We translate your vision into a conceptual design and actionable plan. This stage includes identifying which materials, finishes, and specialty trade partners will be part of the project. You'll know what's included and what to expect.

3 Detailed Planning and Design Approval

We curate your design selections and refine your scope of work. We coordinate with trusted trade partners to build accurate estimates and a realistic project timeline. At this stage, you'll know exactly what's included and every detail of the final design. You'll have time to review, provide feedback, and feel confident before moving forward.

4 Construction and Project Management

With the plan in place, construction begins! Our role is to manage every moving part - from sequencing trades, ordering materials, to problem-solving quickly. You'll receive consistent updates and have access to live finishes and schedule trackers, so you always know where things stand, without the confusion or stress.
