BWRCI Unveils Groundbreaking Patent and Forms Advisory Board to Revolutionize Economic Empowerment

SEPTEMBER 25, 2024

In a significant development for consumer empowerment and economic innovation, The Better World Regulatory Coalition Inc. (BWRCI) has announced the publication of a groundbreaking PCT patent pending and the establishment of its founding Board of Advisors. The patent, titled 'Method and System for Monetizing the Consumption of Goods and Services Using Blockchain Contracts and CETEs,' represents a major stride towards revolutionizing how consumers interact with the economy and are rewarded for their participation.

The patent's core innovation lies in its potential to provide businesses with cutting-edge technological tools that foster strong consumer loyalty while simultaneously allowing consumers to monetize their consumption habits. This dual-benefit approach marks a paradigm shift in the relationship between businesses and consumers, potentially reshaping the landscape of customer engagement and rewards programs.

BWRCI's patent is not just a standalone innovation but part of a broader initiative to create National Autonomous Economies SaaS Testbeds. This ambitious project, currently under consideration for funding by the National Science Foundation (NSF), aims to demonstrate the feasibility of a scalable minimum viable digital infrastructure that could support multiple autonomous economic systems.

Alongside this technological breakthrough, BWRCI has seated its founding Board of Advisors. Comprising business professionals and thought leaders from various sectors, this diverse group will play a crucial role in guiding BWRCI's mission. Their collective expertise will be instrumental in helping fintech initiatives recognize and compensate everyday people for their contributions to economies worldwide, without relying on speculative practices.

MaxBruce, the founder of BWRCI, emphasized the organization's vision of creating an environment where technology and social responsibility converge. He stated, 'With the launch of BWRCI and our newly published patent, we are poised to lead transformative change that empowers communities and promotes economic growth and inclusion like never before just because – that is what we designed the fintech to do.'

The development process of this innovative system has been significantly enhanced by the use of artificial intelligence. AI's ideation and discourse capabilities have provided valuable evaluation and critique, especially crucial when venturing into uncharted territories of socio-economic perspectives. The AI analysis has validated the ambitious nature of BWRCI's goals, suggesting that if realized, these innovations could have profound positive impacts on global well-being.

BWRCI's approach to this revolutionary economic model is grounded in collaboration and transparency. The organization plans to actively engage with various stakeholders, including regulators

and the public, to ensure that its efforts align with broader societal regulatory frameworks.

The implications of BWRCI's patent and initiatives are far-reaching. By enabling consumers to monetize their consumption patterns, this system could lead to more equitable wealth distribution and increased economic participation. For businesses, it offers new ways to build customer loyalty and gain insights into consumer behavior. On a broader scale, this innovation could contribute to more resilient and inclusive economic systems, potentially addressing issues of economic inequality and financial exclusion.

As a newly formed self-regulatory organization, BWRCI is positioned to play a crucial role in overseeing the operations of DIGIPIE International PBC, the Consumers Earned Token Exchange Inc., and their international counterparts. This oversight is essential in ensuring that these innovative financial technologies are implemented responsibly and ethically.

For those interested in learning more about BWRCI and its groundbreaking initiatives, further information is available at **bwrci.org**. As BWRCI continues to develop its technologies and expand its influence, it stands poised to make significant contributions to the future of economic empowerment and financial technology.
