

Follow these steps in preparation for Bed Bug Service or call/text 405.254.0979 for any questions.

On _____ at ___ to ___ AM/PM, an ABBS PC Service Professional will stop by to treat for bed bugs.

Bed Bug Service requires a certain amount of preparation prior to the ABBS PC Service Professional's arrival to make sure your home or apartment is properly serviced. Simply follow the steps listed below for the best results.

Bedrooms

- All sheets, bedding materials, and pillows *except the bottom sheet* should be removed from the beds and sealed in plastic trash bags in preparation of cleaning (see next step). This helps prevent spreading bed bugs to other rooms. **Bed frames will be dismantled/Service Professional will advise after inspection.**
- Sheets, pillows, and clothes stored under the bed (or in a dresser harboring bed bugs) can be washed in soap and hot water. Bed spreads, covers, and other items that cannot be washed should be dried in the dryer at a high temperature for 30 minutes. *Please read the washing instructions on clothing items to ensure they will not be damaged.*
- Clothes need to be removed from closets and drawers, placed in bags, and washed and/or dried at a high temperature in a clothes dryer for 30 minutes.
- Drapes should be bagged before moving from an infested room. Remove them from the bag and dry them at a high temperature for 30 minutes.
- Plastic bags should be available for when the ABBS Service Professional inspects items stored in the nightstand and under the bed. If items are free of infestation, they will be sealed in the bags. Then wait at least two weeks before putting items back into the nightstand or under the bed.

Other Rooms

- Upholstered furniture in other rooms will need to be thoroughly inspected and possibly treated. Any blankets, throw pillows, etc., should be bagged and dried at a high temperature for at least 30 minutes.
- Vacuum carpeting and floor thoroughly, especially along the baseboards with a crack and crevice attachment.
- Dispose of the vacuum bag *immediately* in a sealed plastic bag in an outdoor trash receptacle.
- Remove electric outlet plates in all rooms to allow for treatment of wall voids.

Pets

- Aquariums should have the air pump disconnected and the top covered by a damp towel. Saltwater tanks may need to be removed from the premises as the air pump cannot be disconnected.
- Birds, dogs, cats, and other pets should be taken to another location until after the treatments have had time to dry.

After the Service

- Stay out of the space for a period of 4 hours for treatments to dry.
- Following these steps is essential to ensure the complete control of any bed bug infestation. It may take **several weeks** to gain effective control of bed bugs, so your patience and help are greatly appreciated.
