

Upgrade to
HomeWorks QS

Take advantage of the latest
technology has to offer

For years, you've loved the comfort, convenience, and peace of mind afforded by the lighting control system in your home.

You can control lights at the touch of a button in one room, or every room. Lights automatically turn on and off according to set schedules so you don't have to come home to a dark house, or so your home appears lived in while you're away.

You can even create varying light levels for movie night, entertaining friends, or a quiet family dinner.

But technology has advanced and your system components are aging. So just as you'll need to update your heating/cooling system or appliances, you'll also need to update your lighting control system.

Upgrading your system has many benefits — from preventing system disruption to taking advantage of new features and functionality.

Introducing

HomeWorks QS

The latest, most advanced version
of HomeWorks

Enhance your lifestyle with these new system benefits:

New aesthetics

Palladiom keypad and thermostat

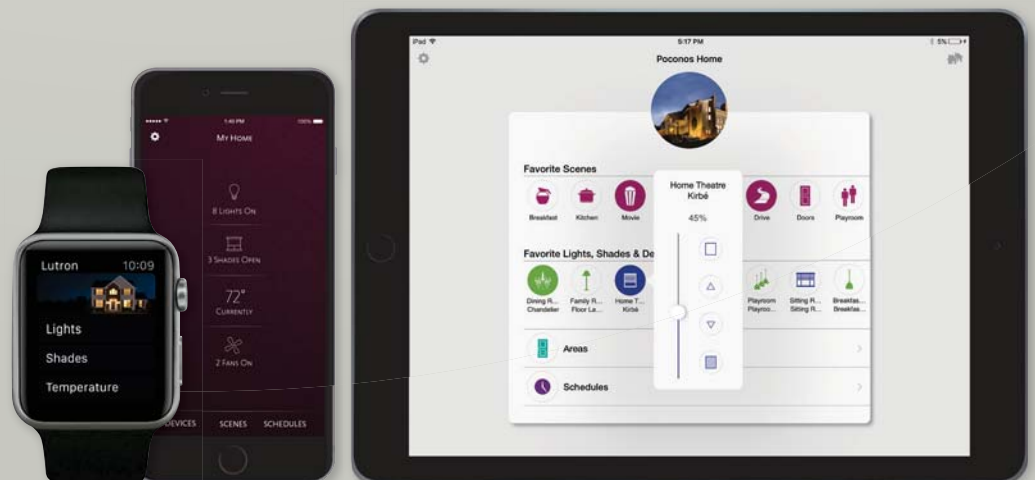

Buttons and faceplates are made from the same material for a coordinated look

GRAFIK T slider

No knobs, sliders, or buttons, just touch

Control from anywhere

HomeWorks QS brings the connected home to your fingertips. You can easily check and change the status of lights, shades, and temperature from anywhere.

Reliable LED control

With HomeWorks QS, you can rest assured that any LEDs you have in your home will dim reliably, without the flickering, popping, and drop-out that often accompanies dimming these bulbs.

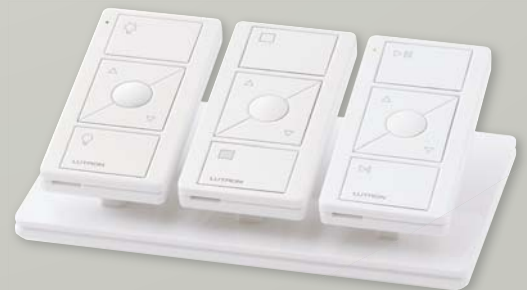

Wireless shade options

Choose from eight sophisticated styles and **hundreds of fabrics** and materials. Our ultra-quiet and precise wireless shading system can control our entire family of automated window treatments. And our **battery-powered system** controls roller and honeycomb shades. Both systems are perfect retrofit solutions.

Wireless Lighting Control

Add control where you didn't have it before. With our new in-line dimmer and switch solutions you can now easily add additional zones of lighting control without having to damage your home. Simply add the device to the area you want to control.

Remote control

Place the battery-powered Pico remote on a tabletop or use it as a hand-held remote. You can also mount it to any wall surface for an additional point of control (no wiring required).

Other smart home technology

In addition to working with many temperature control options, HomeWorks QS integrates with other best-in-class brands for voice-enabled and audio control.

Seamless installation

HomeWorks QS wireless products are excellent retrofit and renovation solutions. That means no new holes in walls and no noise, dust, or inconvenience. HomeWorks QS replaces existing keypads, dimmers, and switches with updated devices. And with our line of battery-powered remotes, shades, and sensors, you can add to the system whenever you want, without any wiring.
