Data needed for setting up an Allstar node

The following data needs to be provided for us to setup your node. If you are setting up your own node you will need this info during the setup process so have it handy. First you will need to visit allstarlink.org to register and setup a server and request a node number. It is a very simple process that should take no more than a few minutes. You are verified as a ham by your QRZ page. You should have an email address there for return information. Once you receive your node number and password you need to fill out this form with the additional information requested.

Your name _____

Your Call _____

Your Phone _____

Your email _____

Your login password _____

Your login password is a password you make up that you will use to login to your node. It should not be any common words. Please print it clearly. Minimum of 8 characters. Case matters.

Your assigned node number _____

The node number and node password are assigned to you at allstarlink.org The node is a 5 digit number and the password is 12 alphanumeric characters. Older passwords are 6 digits. Case matters.

Your node password _____

Node ID -   CW or Voice _____

Your Timezone _____

The radio is programmed for standard simplex frequencies and can be programmed in the field by the user with the use of a programming cable and chirp software. If you have specific frequencies and PL's you want programmed please list them here. 888 is UHF only, UV82 is 2M/440.

Radio Programming _____
