

### Specification

Our high quality crystal end fittings focus on illuminating around the end points to convey a decorative pattern, dependent on the crystal in place.

The FP-CR2 fixture is ideally coupled with our Endglow fibre to maximise the light output and focus the intensity of the light into the end point.

The preferred fibre sizes are: EG2.0, EG4.0 and EG8.0 depending on the desired effect and luminous output.

Our crystal fixtures are designed to work in unison with our pre ferruled Endglow Fibre (FP-CE1) to screw the fibre into it's preferred position to maximise the output and seal the fibre optic cable in position.

### Technical Information

Material	Copper
Weight	18g
Size	72.5mm
Mounting Hole Size	12mm
Min. Fibre Size	2.0mm
Max. Fibre Size	4.8mm

### Ordering Codes

Model	Material	Finish
FP-CR2	Copper	Gold
