

Specification

Our high quality crystal end fittings focus on illuminating around the end points to convey a decorative pattern, dependent on the crystal in place.

The FP-CR4 fixture is ideally coupled with our Endglow fibre to maximise the light output and focus the intensity of the light into the end point.

The preferred fibre sizes are: EG2.0, EG4.0 and EG8.0 depending on the desired effect and luminous output.

Our crystal fixtures are designed to work in unison with our preferred Endglow Fibre (FP-CE1) to screw the fibre into it's preferred position to maximise the output and seal the fibre optic cable in position.

Technical Information

Material	Copper
Weight	7g
Size	26mm
Mounting Hole Size	12mm
Min. Fibre Size	2.0mm
Max. Fibre Size	4.8mm

Ordering Codes

Model	Material	Finish
