

Specification

A medium sized submersible stainless steel fitting perfect for water features, swimming pools and fountains.

The countersink allows it to be flush with whatever surface it is intended for.

Despite being submersible, this fixture offers an array of different purposes dependent on the situation. Countersink fixtures make for great pavers for landscaping such as decking.

It also includes an adjustable gland to allow for extra security when fitting the fibre within the fixture. This can be removed for paver application to lower the depth.

The FP-SM8 is ideally used for Endglow fibre: EG12.0, EG25.0, EG50.0 and EG75.0
