

# What Happens in a Microwave?

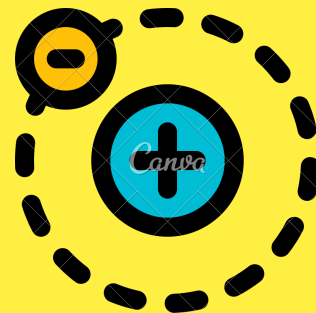

Well, I am M. Microwave and I am the supplier of microwave energy for you, Food

Thank You, M. Microwave.  
I have Water and Ions to do the heating for me. But I wonder how??

Hey, Food. Don't worry. I have the power to "rotate". I will absorb the microwave energy by rotation because I am so dipolar and so I will heat you.

And I have the power to "translate". I will use my translation to heat you up, Food.
