

How to measure your old shirt:

1: Collar Around: Unbutton the shirt and spread it out on its back. Measure the blue line. Do not add extra to account for shrinkage. We will do that for you.

2: Sleeve Length: Place your measuring tape at the start of the sleeve from shoulder through end of the cuff, including the cuff (Blue Line). Pull the sleeve gently to become straight and do not add extra to account for shrinking.

3: Yoke Width (Shoulder) and Cuff: Measure the Yoke width according to the blue line in the following picture.

4: Shirt Length and Chest: Measure according to the blue line in the picture.

6: Waist and Hip: Measure according to the blue line in the picture.
