Profitability analysis, Fund status, Cash and fund flow, Monthly P & L analysis  
Cost centre/branch & ratio analysis

It is a fact that if a project is not completed within the time frame, the cost will naturally escalate & it may land up the company at no/nominal profit situation or sometimes lead to even losses. Without proper technology implementation, it is very difficult to properly & timely evaluate/monitor/administer project revision & amendments. Most of the project executives & company managements have realized the importance of reliable project management software solutions.

In fact INTEGRA, with its 2 - decades of rich experience in software field, has conceptualized the Project Management as a resourceful & effective tool to control & direct a Project right from marketing to initiation, planning to execution and in the course helping to achieve the set goals on time.

INTEGRA Project Management simplifies your work, ensures efficient project delivery, perfect project visualization, fault-less planning, efficient distribution of resources, effective deployment of machinery and man power, optimum use of resources and close tracking of end-to-end processes. By automating the entire wide range of processes, Integra Project Management ERP ensures operational excellence while meeting or exceeding customer expectations.
