IRAN: AN ATTACK WILL FAIL

Iran is planning to attack, but its horoscope is not conducive to success.

As we know, Iran has stated that an attack on Israel is imminent. The October 2, 2024 solar eclipse at 10 Libra 03 is opposite the Iranian Sun at 9 Aries 00. Eclipse analysis tells us that an eclipse conjunct the Sun emboldens one and pushes one into prominence with an orb of 5 degrees. Eclipses opposite the Sun, such as this one, knock one down. A solar eclipse begins to heat up about 90 days before it occurs so this coming October eclipse is already effective.

Here are a few more points. Any effort begun in the week prior to an eclipse rarely works out as planned. If one has no choice as to the commencement of an effort prior to an eclipse, then one will be forced to make significant changes in order to achieve one's objectives. Events begun on the day of an eclipse are the most fated.

Here are examples. In 2020, the December 14th solar eclipse opposed Donald Trump's natal Sun very closely, and he lost the election. In the prior election, an eclipse opposed Mitt Romney's progressed Sun with an orb of 4 degrees, and he lost that election. The 2 spring eclipses are very descriptive as to what happens with actions taken before and on the day of eclipses. The NY State attorney general announced that she would seize Trump's assets on the day of the first eclipse. This failed so she selected a second date which was the date of the second eclipse, and that also failed. Ronna McDaniel was hired in the week before the lunar eclipse, leading to protests from CNBC anchors. She lasted for 4 days. Matters begun in the week before on the day of the eclipse do not work out as planned.

In his work on WW2, Charles Jayne described many military campaigns that failed either because the eclipse opposed the individual commander's natal Sun or because the effort was begun in the week prior to an eclipse.

The October eclipse opposes Iran's Sun and we are in the 90-day span prior to its occurrence. Any military effort is likely to backfire. It is possible that Iran may stand down and wait until the spring.

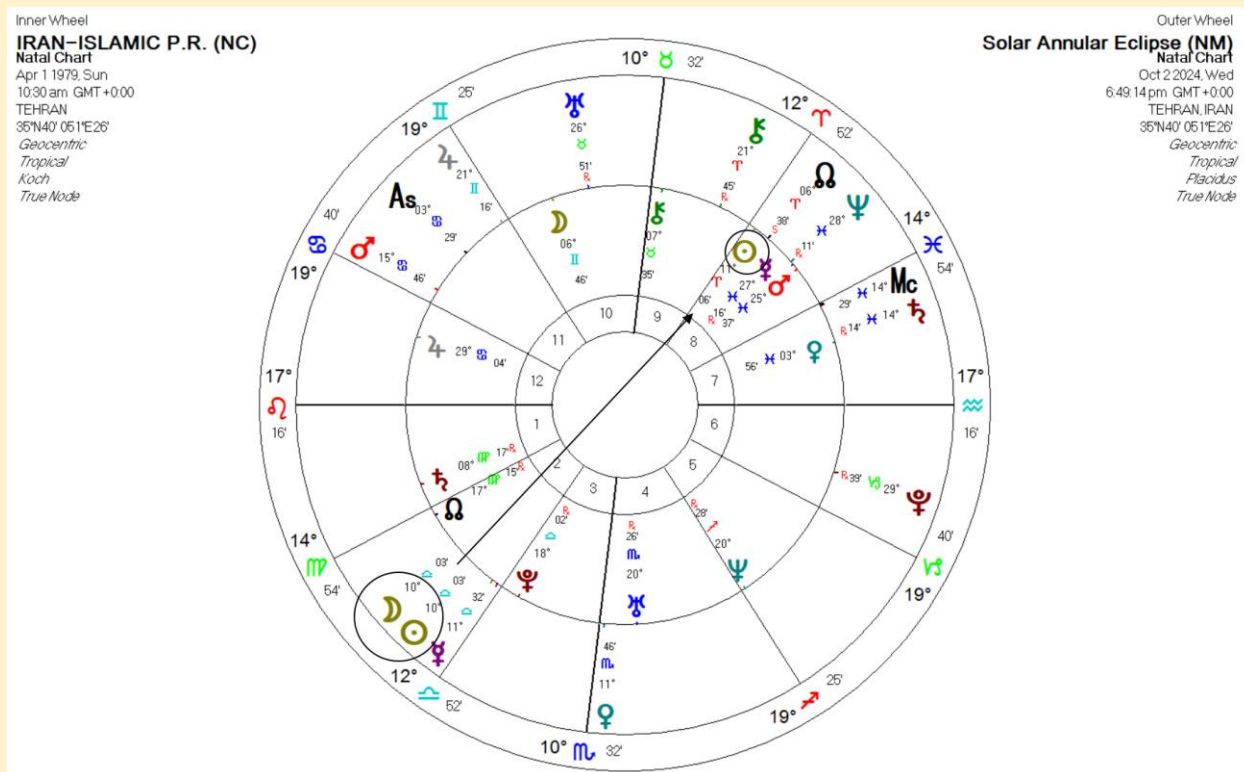

The solar eclipse chart set for Tehran has Saturn on the MC which is 45 degrees to Pluto, unfavorable for Iran. The dwarf planet, Ixion, opposes the Tehran ascendant. The same combination that existed in the chart of the Tiananmen Square massacre is evident here and its interpretation is 'atrocities committed by the government.' The chart suggests the malfunction of equipment, especially missiles and any fired projectiles. The damage and casualties will lower Iran's public image. Here is another clue. This eclipse is more favorable for Iran's enemies, Saudi Arabia and Turkey.

The most likely time for an assault ranges from August 27 to September 2. The September 18 lunar eclipse is on the Mars-Mercury conjunction and is 45 degrees to the MC. Lunar eclipses have an effect in the 6 weeks on either side of its occurrence so this eclipse is also becoming effective. The time orb ranges from August through October. This adds fuel to the fire.

The chart of Israel is not very afflicted, except for the Uranus station on September 1st. This station squares Mars at 28 Leo, which is also the Mars positions of both Netanyahu and Trump. This has historically been a violent connection. However, Mars in the Israeli chart is well-positioned. Mars equals the Uranus/MC and the ASC/Jupiter midpoints. This describes military success. The IDF force moves and strikes quickly with initiative. The Uranus station is threatening, but the Israeli reaction is likely to be successful. The retrograde Jupiter station is very favorable for the nation on October 9th and will also contribute to a successful outcome.

The March 2025 solar eclipse is the next flash point for Iranian action. The March 29, 2025 eclipse at 9 Aries is conjunct the Iranian Sun. The national birthday is on April 1st. If your birthday is within 1 week of an eclipse, it is an important year. There is a difference in the week before and the week after the eclipse. If the birthday is the week prior to the eclipse, efforts in that year will work out unexpectedly. If the birthday is the week after the eclipse such as this one is, the unexpected quality evaporates. It is a year in which one's will is super charged, enabling one to achieve one's goals.

The last time that an eclipse combination like this occurred was in 2005-2006 when the October eclipse also opposed the Sun while the spring eclipse conjoined it. During the first one, Iran was blocked in its attempts to acquire weapon technology but was more successful in the spring of 2006.
