

INVASIVE

SPECIES

Yellow Floating Heart

IDENTIFICATION

Floating Yellow Heart is an invasive aquatic plant. Its leaves are circular or heart shaped and the flowers are bright yellow with 5 petals and is located above the water's surface.

FEATURES

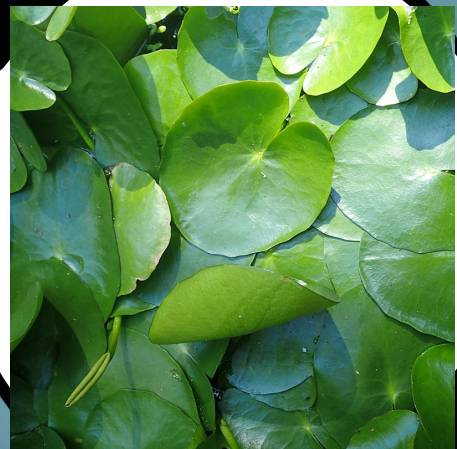

Creates dense mats

Decreases oxygen levels

Increases mosquito breeding

HABITAT

Yellow Floating Heart is found in slow-moving streams and rivers, lakes and ponds. It is a rooted perennial with floating leaves. It overshadows native aquatic plants and obstructs boating activity, swimming and fishing.
