

Profit and Loss Ex 10A

IMPORTANT FACTS

Cost Price:

The price, at which an article is purchased, is called its cost price, abbreviated as C.P.

The price, at which an article is sold, is called its selling prices, abbreviated as S.P. Profit or Gain:

If S.P. is greater than C.P., the seller is said to have a profit or gain.

If S.P. is less than C.P., the seller is said to have incurred a loss.

IMPORTANT FORMULAE

3. Loss or gain is always reckoned on C.P.

Gain % =
$$\left(\frac{\text{Gain x 100}}{\text{C.P.}}\right)$$

5. Loss Percentage: (Loss %)

Loss % =
$$\left(\frac{\text{Loss x 100}}{\text{C.P.}}\right)$$

6. Selling Price: (S.P.)

$$SP = \left[\frac{(100 + Gain \%)}{100} \times C.P \right]$$

7. Selling Price: (S.P.)
$$SP = \left[\frac{(100 - Loss \%)}{100} \times C.P. \right]$$

8. Cost Price: (C.P.)
$$C.P. = \left[\frac{100}{(100 + Gain \%)} \times S.P. \right]$$

C.P. =
$$\left[\frac{100}{(100 - \text{Loss \%})} \times \text{S.P.}\right]$$

- 10. If an article is sold at a gain of say 35%, then S.P. = 135% of C.P.
- 11. If an article is sold at a loss of say, 35% then S.P. = 65% of C.P.
- Million Stars & Practice 12. When a person sells two similar items, one at a gain of say x%, and the other at a loss of x%, then the seller always incurs a loss given by:

Loss % =
$$\left(\frac{\text{Common Loss and Gain \%}}{10}\right)^2 = \left(\frac{x}{10}\right)^2$$
.

13. If a trader professes to sell his goods at cost price, but uses false weights, then Gain % =
$$\frac{\text{Error}}{(\text{True Value}) - (\text{Error})} \times 100$$
 %.

Q1.

(i)
$$CP = Rs. 620$$
 $SP = Rs. 713$
 $Since SP > CP$, there is a gain.
 $Gain = 713 - 620 = Rs. 93$
 $Gain percentage = \left(\frac{gain}{CP} \times 100\right)\%$
 $= \left(\frac{93}{620} \times 100\right)\%$
 $= 15\%$

$$\begin{split} &\text{(ii)} \\ &\mathbf{CP} = \mathbf{Rs} \ 675 \\ &\mathbf{SP} = \mathbf{Rs} \ 630 \\ &\mathbf{Since} \ \mathbf{SP} < \ \mathbf{CP}, \ \mathbf{there} \ \ \mathbf{is} \ \mathbf{a} \ \mathbf{loss}. \\ &\mathbf{Loss} = 675 \ - \ 630 \ = \ \mathbf{Rs}. \ 45 \\ &\mathbf{Loss} \ \mathbf{percentage} \ = \left(\frac{\mathbf{Loss}}{\mathbf{CP}} \times 100\right)\% \\ &= \left(\frac{45}{675} \times 100\right)\% \\ &= 6 \ \frac{2}{3} \ \% \end{split}$$

(iii)

$$CP = Rs. 345$$
 $SP = Rs. 372.60$
Since $SP > CP$, there is a gain.

 $Gain = 372.60 - 345 = Rs. 27.6$
 $Gain percentage = \left(\frac{gain}{CP} \times 100\right)\%$
 $= \left(\frac{27.6}{345} \times 100\right)\%$
 $= \left(\frac{2760}{345}\right)\%$
 $= 8\%$

(iv)

 $CP = Rs \ 80$
 $SP = Rs \ 76.80$
Since $SP < CP$, there is a loss.

 $Loss = 80 - 76.80 = Rs. 3.2$
 $Loss percentage = \left(\frac{loss}{CP} \times 100\right)\%$

(iv)
$$CP = Rs \ 80$$
 $SP = Rs \ 76.80$ Since $SP < CP$, there is a loss. Loss $= 80 - 76.80 = Rs. \ 3.2$ Loss percentage $= \left(\frac{loss}{CP} \times 100\right)\%$ $= \left(\frac{3.2}{80} \times 100\right)\%$ $= \left(\frac{3.2}{80} \times 100\right)\%$ $= 4\%$

(iii)
$$ext{CP} = ext{Rs. } 875$$
 $ext{Loss percentage} = 12\%$ $ext{SP} = \frac{(100 - loss \%)}{100} \times ext{CP}$ $ext{} = \frac{(100 - 12)}{100} \times 875$ $ext{} = \frac{77000}{100}$ $ext{} = ext{Rs. } 770$

(iv)

$$\begin{aligned} & \text{CP} = \text{Rs. } 645 \\ & \text{Loss percentage} = 13 \, \frac{1}{3} \, \% = \frac{40}{3} \, \% \\ & \text{SP} = \frac{\left(100 - \text{loss } \%\right)}{100} \times \text{CP} \\ & = \frac{\left(100 - \frac{40}{3}\right)}{100} \times 645 \\ & = \frac{\left(\frac{300 - 40}{3}\right)}{100} \times 645 \\ & = \left(\frac{260}{3}\right) \times \left(\frac{1}{100}\right) \times 645 \\ & = \text{Rs. } 559 \end{aligned}$$

Q3.

Answer:

$$\begin{aligned} & \text{(i)} \\ & \text{SP} = \text{Rs. } 1596 \\ & \text{Gain percentage} = 12\% \\ & \text{CP} = \frac{100}{(100+\text{gain \%})} \times \text{SP} \\ & = \frac{100}{(100+12)} \times 1596 \\ & = \text{Rs. } 1425 \end{aligned}$$

(ii)

$$\begin{split} & \mathbf{SP} = \mathbf{Rs.} \ 2431 \\ & \mathbf{Loss\ percentage} = 6\ \frac{1}{2}\ \% = \frac{13}{2}\ \% \\ & \mathbf{CP} = \frac{100}{\left(100 - \mathbf{loss}\ \%\right)} \times \mathbf{SP} \\ & = \frac{100}{\left(100 - \frac{13}{2}\right)} \times 2431 \\ & = \frac{100 \times 2}{187} \times 2431 \\ & = \mathbf{Rs.} \ 2600 \end{split}$$

(iii)

$$\begin{split} & \text{SP} = \text{Rs. } 657.60 \\ & \text{Loss percentage} = 4\% \\ & \text{CP} = \frac{100}{\left(100 - \text{loss }\%\right)} \times \text{SP} \\ & = \frac{100}{\left(100 - 4\right)} \times 657.60 \\ & = \text{Rs. } 685 \end{split}$$

(iv)

$$\begin{split} & \mathbf{SP} = \mathbf{Rs.} \ \, 34.40 \\ & \mathbf{Gain \ percentage} = 7\,\frac{1}{2}\,\% = \frac{15}{2}\,\% \\ & \mathbf{CP} = \frac{100}{\left(100 + \mathbf{gain}\ \%\right)} \times \mathbf{SP} \\ & = \frac{100}{\left(100 + \frac{15}{2}\right)} \times 34.40 \\ & = \frac{100.2}{215} \times 34.40 \\ & = \mathbf{Rs.} \ \, 32 \end{split}$$

Q4.

Answer:

CP of the iron safe = Rs. 5580
Transportation = Rs. 170
Total CP = Rs
$$\left(5580 + 170\right)$$
 = Rs. 5750
SP = Rs. 6440
Since SP > CP, Manjit makes a profit.
Gain = 6440 - 5750
= Rs 690
Gain percentage = $\left(\frac{\text{gain}}{\text{total CP}} \times 100\right)\%$
= $\left(\frac{690}{5750} \times 100\right)\%$
= 12%

Q5.

CP of the car = Rs. 73500Repairs = Rs. 10300 $\mathbf{Insurance} = \mathbf{Rs.} \ \ \mathbf{2600}$ Total CP = 73500 + 10300 + 2600 = Rs.86400SP = Rs. 84240Since SP < CP, Robin has a loss. Loss = 86400 - 84240= Rs. 2160 Loss percentage = $\left(\frac{\text{loss}}{\text{total CP}} \times 100\right)\%$ $=\left(\frac{2160}{86400}\times100\right)\%$ $=2\frac{1}{2}\%$

Q6.

Answer:

The price of rice is Rs 18 per kg. According to the question, we have: Cost for 20 kg of rice = $20 \times 18 = \text{Rs.} 360$ Cost for 25 kg of rice $= 25 \times 16 = Rs. 400$ Total CP = 360 + 400 = Rs. 760Also, total quantity of rice = 20 + 25 = 45 kg $SP = 45 \times 19 = Rs. 855$ Since SP > CP, there is a gain. Now, gain = 855 - 760 =Rs. 95 Let 5 kg of coffee be mixed with 2 kg of chicory. CP of the mixture = Rs $\left(250 \times 5 + 75 \times 2\right)$ = Rs $\left(1250 + 150\right)$ = Rs. 1400 3P of the mixture = Rs. Gain percentage = $\left(\frac{\text{gain}}{\text{total CP}} \times 100\right)\%$

$$=$$
Rs $\left(1250 + 150\right)$
 $=$ Rs 1400

Since SP > CP, there is a gain.

Now, gain = Rs
$$\left(1610 - 1400\right)$$

Gain percentage = $\left(\frac{\text{gain}}{\text{total CP}} \times 100\right)\%$

$$= \left(\frac{210}{1400} \times 100\right)\%$$
$$= 15\%$$

Q8.

Answer:

Let Rs x be the SP of each bottle and Rs y be the CP of each bottle.

SP of 16 bottles = CP of 17 bottles

$$\Rightarrow 16\mathbf{x} = 17\mathbf{y}$$

$$\Rightarrow \frac{\mathbf{x}}{\mathbf{y}} = \frac{17}{16}$$

 $\mathbf{Gain} \ \mathbf{per} \ \mathbf{bottle} = \mathbf{SP} - \mathbf{CP}$

$$= \mathbf{Rs} (\mathbf{x} - \mathbf{y})$$

∴ Gain percentage =
$$\left(\frac{\text{gain}}{\text{CP}} \times 100\right)\%$$

= $\left(\frac{\mathbf{x} - \mathbf{y}}{\mathbf{y}} \times 100\right)\%$
= $\left\{\left(\frac{\mathbf{x}}{\mathbf{y}} - 1\right) \times 100\right\}\%$
= $\left\{\left(\frac{17}{16} - 1\right) \times 100\right\}\%$
= $\left(\frac{1}{16} \times 100\right)\%$
= $\left(\frac{1}{4}\%\right)$

Q9.

Let Rs x be the CP of one candle and Rs. y be the SP of one candle. Now, CP of 12 candles = SP of 15 candles $\Rightarrow 12x = 15y$ $\Rightarrow \frac{y}{x} = \frac{12}{15}$ Loss = CP - SP $= \operatorname{Rs} \ ig(x-yig)$ \therefore Loss percentage = $\left(\frac{\text{loss}}{\text{CP}} \times 100\right)\%$ $=\left\{\left(\frac{x-y}{x}\right)\times 100\right\}\%$ $=\left\{\left(1-\frac{y}{x}\right)\times 100\right\}\%$ $= \left\{ \left(1 - \frac{12}{15}\right) \times 100 \right\} \%$ $=\left(\frac{3}{15}\times 100\right)\%$ = 20%

Q10.

Answer:

Let Rs x be the SP of one cassette. SP of 5 cassettes = Rs. 5xSP of 125 cassettes = Rs. 125x $\label{eq:Gain} \textbf{Gain} = \textbf{Rs. 5x, when SP} = \textbf{Rs. } 125x$ Mondelehale $But\ gain =\ SP-CP$ $\Rightarrow \overrightarrow{CP} = \overrightarrow{SP} - gain$ = 125x - 5x=Rs. 120x \therefore G ain percentage = $\left(\frac{\text{gain}}{\text{CP}} \times 100\right)\%$ $= \left(\frac{5x}{120x} \times 100\right)\%$ $=4\frac{1}{6}\%$

Q11.

Answer:

Let Rs x be the SP of one lemon. SP of 45 lemons = Rs. 45xLoss = SP of 3 lemons = Rs. 3x $But\ loss = CP - SP$ CP = loss + SP=3x+45x=Rs. 48x \therefore Loss percentage = $\left(\frac{\text{loss}}{\text{CP}} \times 100\right)\%$ $= \left(\frac{3x}{48x} \times 100\right)\%$ $=6\frac{1}{4}\%$

Q12.

Million State & Practice
Williams & Practice

CP of 6 oranges = Rs. 10

CP of 1 orange =
$$\frac{10}{6}$$
 = Rs. $\frac{5}{3}$

SP of 4 oranges = Rs. 9

SP of 1 orange = Rs. $\frac{9}{4}$

Since SP > CP, there is a gain.

Now, gain = SP - CP

= $\frac{9}{4} - \frac{5}{3}$

= Rs. $\frac{7}{12}$

Cain percentage = $\sqrt{\frac{\text{gain}}{m}} \times 100$

∴ Gain percentage =
$$\left(\frac{\text{gain}}{\text{CP}} \times 100\right)\%$$

= $\left(\frac{\frac{7}{12}}{\frac{5}{3}} \times 100\right)\%$
= $\left(\frac{7}{12} \times \frac{3}{5} \times 100\right)\%$
= $\left(\frac{7}{4} \times 20\right)\%$
= 35%

Q13.

Answer:

SP of 10 bananas = Rs. 18
SP of 1 banana =
$$\frac{18}{10}$$
 = Rs. $\frac{9}{5}$
CP of 12 bananas = Rs. 16
CP of 1 banana = Rs $\frac{16}{12}$ = Rs. $\frac{4}{3}$
Since SP > CP, there is a gain.
Now, gain = SP - CP
= $\frac{9}{5} - \frac{4}{3}$
= Rs. $\frac{7}{15}$

$$\therefore \text{ Gain percentage} = \left(\frac{\frac{7}{15}}{\frac{3}{4}} \times 100\right)\%$$

$$= \left(\frac{7}{15} \times \frac{3}{4} \times 100\right)\%$$

$$= 35\%$$

Q14.

Answer:

CP of 10 apples = Rs. 25
SP of 12 apples = Rs. 25
SP of 10 apples = Rs
$$\frac{25}{12} \times 10 = \text{Rs.}$$
 $\frac{125}{6}$
Since SP < CP, there is a loss.
Now, loss = CP − SP
= Rs $\frac{25}{6}$
= Rs. $\frac{25}{6}$
∴ Loss percentage = $\left(\frac{\text{loss}}{\text{CP}} \times 100\right)\%$
= $\left(\frac{\frac{25}{6}}{25} \times 100\right)\%$
= 16.67%

Q15.

Let *x* be number of eggs he purchased. CP of 3 eggs = Rs. 5
CP of x eggs = Rs. $\frac{5}{3}x$ SP of 5 eggs = 12
SP of x eggs = $\frac{12}{5}x$ ∴ Gain = SP - CP
= $\frac{12}{5}x - \frac{5}{3}x$ = Rs. $\frac{11}{15}x$ Now, $\frac{11}{15}x = 143$ ⇒ $x = 143 \div \frac{11}{15}$ ⇒ $x = 143 \times \frac{15}{11}$ ⇒ x = 195

Q16.

Answer:

SP of the camera = Rs. 1080 Let Rs x be the CP. Gain = Rs. $\frac{1}{8}x$... (i)
Also, gain = SP - CP
= Rs. $\left(1080 - x\right)$... (ii)
From (i) and (ii), we have:

$$\frac{1}{8}$$
 x = 1080 − x
⇒ x = 8640 − 8x
⇒ 9x = 8640
⇒ x = 960
∴ CP = Rs. 960
Now, gain = $\frac{1}{8}$ x
= $\frac{960}{8}$
= Rs. 120
∴ Gain percentage = $\left(\frac{120}{960} \times 100\right)$ %

Q17.

Answer:

 $=12\frac{1}{2}\%$

SP of the pen = Rs. 54

Let Rs x be the CP of the pen.

Loss = Rs. $\frac{x}{10}$ SP = CP - Loss
= $x - \frac{x}{10}$ = Rs. $\frac{9x}{10}$ Now, we have $\frac{9x}{10} = 54$ ⇒ $x = 54 \times \frac{10}{9}$ ⇒ x = 60
∴ CP of the pen = Rs. 60

Now, loss = $\frac{x}{10}$ = $\frac{60}{10}$ = Rs. 6

∴ Loss percentage = $\left(\frac{\log x}{CP} \times 100\right)\%$ = $\left(\frac{6}{60} \times 100\right)\%$ = 10%

Q18.

Let Rs x be the CP of the table.

Case I:

Loss percentage = 10%

$$\Rightarrow \text{Loss}\% = \left(\frac{\text{loss}}{\text{CP}} \times 100\right)\%$$

$$\Rightarrow 10 = \frac{\text{loss}}{x} \times 100$$

$$\Rightarrow \frac{\text{Loss}}{x} = \frac{1}{10}$$

$$\Rightarrow$$
 Loss = Rs $\frac{z}{10}$

Suppose that SP_1 is the selling price when he incurs a loss of 10%.

Loss = Rs
$$\frac{\mathbf{x}}{10}$$

$$\Rightarrow$$
 CP $-$ SP₁ $= \frac{x}{10}$

$$\Rightarrow$$
 SP₁ = $x - \frac{x}{10}$

$$= \text{Rs} \frac{9x}{10}$$

Case II:

 ${\bf Gain\ percentage}\ =\ 10\%$

$$\Rightarrow \text{ Gain } \% = \left(\frac{\text{gain}}{\text{CP}} \times 100\right)\%$$

$$\Rightarrow 10 = \frac{\text{gain}}{x} \times 100$$

$$\Rightarrow \frac{\mathrm{Gain}}{\mathbf{z}} = \frac{1}{10}$$

$$\Rightarrow$$
 Gain = Rs $\frac{x}{10}$

Suppose that SP_2 is the selling price when he makes gain of 10%.

Q19.

Answer:

Let Rs x be the CP.

$$Gain_1 percentage = \left(\frac{gain_1}{CP} \times 100\right)\%$$

$$\Rightarrow 15 = \frac{\text{gain}_1}{x} \times 100$$

$$\Rightarrow$$
 Gain₁ = Rs $\frac{15z}{100}$

ondershalle Officient Again, gain₂ percentage = $\left(\frac{gain_2}{CP} \times 100\right)\%$

$$\Rightarrow 8 = \frac{\mathrm{gain}_2}{x} \times 100$$

$$\Rightarrow$$
 Gain₂ = Rs $\frac{8x}{100}$

According to the question, we have:

$$\mathbf{Gain}_1 - \mathbf{gain}_{\;2} = \; 56$$

$$\Rightarrow \frac{15\mathbf{x}}{100} - \frac{8\mathbf{x}}{100} = 56$$

$$\Rightarrow \frac{7\mathbf{x}}{100} = 56$$

$$\Rightarrow 7x = 5600$$

$$\Rightarrow x = 800$$

Hence, the CP of the chair is Rs 800.

Q20.

Million Stars & Practice

Williams and Start Services

White the start of the start

Let the cost price of the cycle be Rs x.

$$\begin{split} & \text{SP of the cycle at } 10\% \ \ \text{gain} = \text{Rs} \ \left\{ \frac{100 + \text{gain}\%}{100} \times \text{CP} \right\} \\ & = \text{Rs} \ \left\{ \frac{100 + 10}{100} \times x \right\} \\ & = \text{Rs} \ \left\{ \frac{110x}{100} \right\} \\ & = \text{Rs.} \ \frac{11x}{10} \end{split}$$

= Rs.
$$\frac{11x}{10}$$

SP of the cycle at 14% gain= Rs $\left\{\frac{100+14}{100} \times x\right\}$

= Rs $\left\{\frac{114x}{100}\right\}$

= Rs $\left\{\frac{57x}{100}\right\}$
 $\therefore \frac{57x}{50} - \frac{11x}{10} = 65$
 $\Rightarrow \left(\frac{57x}{50} - \frac{55x}{50}\right) = 65$
 $\Rightarrow \frac{57x-55x}{50} = 65$
 $\Rightarrow 2x = 3250$
 $\Rightarrow x = 1625$

Therefore, the cost price of the cycle is Rs 1625.

Q21.

 $\mathbf{z} = \mathbf{Rs.} \ 250$ $\mathbf{z} = \mathbf{rs.} \ 250$ $\mathbf{z} = \mathbf{rs.} \ 210$ $\mathbf{z} = \mathbf{rs.} \ 250$ $\mathbf{z} = \mathbf{rs.} \ 210$ $\mathbf{rs.} = \mathbf{rs.} \ 210$

Now, gain percentage =
$$\Rightarrow Gain = \frac{(gain \%) \times CP}{100}$$

$$\Rightarrow Gain = \frac{460 \times 5}{100}$$
= Rs 23
$$\therefore SP = CP + gain$$
= 460 + 23
= Rs 483

$$\therefore$$
 Rate per kg = Rs $\frac{483}{70} =$ **Rs** 6.9

Q22.

Answer:

CP of the first bat = Rs 560 Gain percentage = 15%

SP of the first bat = Rs
$$\left\{ \frac{100 + \text{gain }\%}{100} \times \text{CP} \right\}$$

= Rs $\left\{ \frac{100 + 15}{100} \times 560 \right\}$
= Rs $\left\{ \frac{115}{100} \times 560 \right\}$
= Rs 644

CP of the second bat = Rs 240 Loss percentage = 5%

$$\begin{split} & \text{SP of the second bat} = \text{Rs } \left\{ \frac{100 - \text{loss \%}}{100} \times \text{CP} \right\} \\ & = \text{Rs } \left\{ \frac{100 - 5}{100} \times 240 \right\} \\ & = \text{Rs } \left\{ \frac{95}{100} \times 240 \right\} \\ & = \text{Rs } 228 \end{split}$$

Total CP of the two bats = Rs
$$(560 + 240)$$
 = Rs 800
Total SP of the two bats = Rs $(644 + 228)$ = Rs 872

Since SP >CP, there is gain in the whole transaction.

Now, gain = Rs (872 - 800) = Rs 72

=∴ Gain percentage =
$$\left\{\frac{\text{gain}}{\text{total CP}} \times 100\right\}\%$$

= $\left\{\frac{72}{800} \times 100\right\}\%$
= 9%

Wasim gains 9% on the whole transaction.

Q23.

Answer:

CP of one jeans = Rs 725 Gain percentage = 8%

SP of one jeans = Rs
$$\left\{ \frac{100 + \text{gain \%}}{100} \times \text{CP} \right\}$$

= Rs $\left\{ \frac{100 + 8}{100} \times 725 \right\}$
= Rs $\left\{ \frac{108}{100} \times 725 \right\}$
= Rs 783

CP of the other jeans = Rs 725 Loss percentage = 4%

$$\begin{split} & \text{SP of the other jeans} = \left\{ \frac{100 - \text{loss }\%}{100} \times \text{CP} \right\} \\ & = \left\{ \frac{100 - 4}{100} \times 725 \right\} \\ & = \left\{ \frac{96}{100} \times 725 \right\} \\ & = \text{Rs } 696 \end{split}$$

Total CP of the two pairs of jeans = Rs (725×2) = Rs 1450 Total SP of the two pairs of jeans = Rs (696 + 783) = Rs 1479 Since SP > CP, there is a gain in the whole transaction.

Now, gain = Rs (1479 - 1450) = Rs 29
∴ Gain percentage =
$$\left\{\frac{\text{gain}}{\text{to tal CP}} \times 100\right\}\%$$

= $\left\{\frac{29}{1450} \times 100\right\}\%$
= 2%

Hence, Hema gains 2% on the whole transaction.

Q24.

CP of 1 kg of sugar = Rs 25 C.P of 200 kg sugar= \mathbf{Rs} (200 × 25) = \mathbf{Rs} 5000 CP of 80 kg of sugar= \mathbf{Rs} (25 × 80) = \mathbf{Rs} 2000

CP of 40 kg of sugar = Rs (25 \times 40) = Rs 1000

SP of 80 kg of sugar =
$$\frac{100+gain\%}{100} \times CP$$

= Rs $\frac{110}{100} \times 2000$

SP of 40 kg sugar =
$$\frac{100-\text{loss}\%}{100} \times \text{CP}$$

= Rs $\frac{96}{100} \times 1000$

$$= Rs 960$$

SP of 200 kg sugar =
$$\frac{100+gain \%}{100} \times CP$$

$$=$$
 Rs $\frac{108}{100} \times 5000$

$$=$$
Rs 5400

Remaining quantity of sugar = (200 - 80 + 40) kg = 80 kg

Q25.

Let Rs x be the CP. Then, SP =Rs $\frac{4x}{2}$ Since SP > CP, there is a gain.

$$egin{array}{ll} Now, \ gain &= SP - CP \ &= rac{4}{3} \ x - x \ &= \operatorname{Rs} \ rac{x}{3} \ \end{array}$$

∴ Gain percentage =
$$\left(\frac{g \sin}{\text{CP}} \times 100\right)\%$$

= $\left(\frac{100 \times x}{3x}\right)\%$
= 33.33%

Q26.

Answer:

Let CP be Rs x. Then, SP = Rs $\frac{4x}{5}$ Since CP>SP, there is a loss.

Loss = CP - SP
=
$$x - \frac{4x}{5} = \text{Rs } \frac{x}{5}$$

 \therefore Loss percentage = $\left(\frac{\text{loss}}{\text{CP}} \times 100\right)\%$
= $\left(\frac{x}{5} \times 100\right)\%$
= 20%
Thus, there is a loss of 20%.
Q27.
Answer:
SP of the umbrella = Rs 115.20
Loss = 10%
CP of the umbrella = $\frac{100}{100-\text{loss}} \times \text{SP}$

Thus, there is a loss of 20%.

Q27.

Answer:

SP of the umbrella = Rs 115.20

Loss = 10%

CP of the umbrella
$$=\frac{100}{100-loss} \times SP$$

$$= \text{Rs } \frac{100}{100-10} \times 115.20$$

$$=$$
 Rs $\frac{100}{90} \times 115.20$

$$= \mathbf{Rs} \ \mathbf{128}$$

Now, CP = Rs 128 and desired gain = 5%

∴ Desired SP =
$$\frac{100 + gain \%}{100} \times CP$$

= Rs $\frac{105}{100} \times 128$
= Rs 134.4

Hence, the desired selling price is Rs 134.4

Q28.

SP of the bouquet = Rs 322

Gain percentage = 15%

CP of the umbrella $= \left(\frac{100}{100 + \text{gain \%}}\right) \times \text{SP}$

$$= \text{Rs} \left(\frac{100}{100+15} \right) \times 322$$

$$=$$
 Rs $\frac{100}{115} \times 322$

$$=$$
Rs 280

Now, CP =Rs 128 and desired gain percentage = 25%

$$\therefore$$
 Desired SP = $\left(\frac{100+gain \%}{100}\right) \times CP$

$$= \text{Rs} \ \frac{125}{100} \times 280$$

$$=$$
Rs 350

Hence, the selling price to obtain the desired gain must be Rs 350

Q29.

Answer:

Let the original price be x

$$\Rightarrow 3120 = x - \frac{4}{100}$$

$$\Rightarrow 3120 = x - \frac{x}{25}$$

$$\Rightarrow \frac{3120 \times 25}{3120 \times 25} = a$$

$$\Rightarrow x = 3250$$

If it is sold for Rs 3445, then its a gain because SP > CP

Now, gain = SP - CP

= Rs (3445 - 3250)= Rs 195

• Gain percentage = $\left(\frac{gain}{CP} \times 100\right)\%$ = $\left(\frac{195}{3250} \times 100\right)\%$ = 6%

$$\therefore$$
 Gain percentage = $\left(\frac{gain}{GR} \times 100\right)$ %

$$=\left(\frac{195}{3250}\times100\right)\%$$

$$= 6\%$$

Q30.

Answer:

SP of one saree = Rs 2185

Gain percentage = 15%

CP of one saree =
$$\left\{\frac{100}{100+gain\,\%}\times SP\right\}$$

$$= \text{Rs} \Big\{ \frac{100}{100+15} \times 2185 \Big\}$$

$$= \text{Rs}\Big\{\tfrac{100}{115} \times 2185\Big\}$$

SP of the other saree = Rs 2185

Loss percentage = 5%

CP of the other aree =
$$\left\{\frac{100}{100-loss\%} \times SP\right\}$$

$$=\left\{\frac{100}{100-5}\times2185\right\}$$

$$= \left\{ \frac{100}{95} \times 2185 \right\}$$

$$=$$
 Rs 2300

Total SP of the two sarees = Rs (2185 x 2)= Rs 4370 Total CP of the two sarees = Rs (1900 + 2300) = Rs 4200 Since SP > CP, there is a gain in the whole transaction.

Million Stars & Practice
Williams and Stars of the Control of the

Now, gain = Rs (4370 - 4200) = Rs 170

∴ Gain percentage =
$$\left\{\frac{\text{gain}}{\text{total CP}} \times 100\right\}\%$$

= $\left\{\frac{170}{4200} \times 100\right\}\%$
= $4\frac{200}{4200}\%$
= $4\frac{1}{21}\%$

Hence, Luxmi gains $4\frac{1}{21}\%$ in the whole transaction.

Q31.

Answer:

SP of one fan = Rs 990

Gain percentage = 10%

CP of one fan = $\left\{\frac{100}{100+gain\%} \times SP\right\}$ = $\left\{\frac{100}{100+10} \times 990\right\}$ = $\left\{\frac{100}{110} \times 990\right\}$

SP of the other fan =Rs 900

Loss percentage = 10%

=Rs. 900

Its
$$CP = \left\{ \frac{100}{100 - loss\%} \times SP \right\}$$

= $\left\{ \frac{100}{100 - 10} \times 990 \right\}$
= $\left\{ \frac{100}{90} \times 990 \right\}$
= Rs 1100

Total CP of the two fans = Rs (900 + 1100) = Rs Total SP of the two fans = Rs (990 + 990) = Rs Since CP >SP, there is a loss in the whole transaction. Now, loss = Rs (2000 - 1980) = Rs

$$\therefore \ \textit{Loss percentage} \ = \Big\{ \frac{\textit{loss}}{\textit{total CP}} \times 100 \Big\} \%$$

$$= \Big\{ \frac{20}{2000} \times 100 \Big\} \%$$

Hence, the shopkeeper incurs a loss of 1% in the whole transaction.

Q32.

Answer:

CP of sugar = Rs 4500

Profit on one-third of the sugar = 10%

CP of one-third of the sugar = Rs $\frac{4500}{3} = Rs$. 1500

SP of one – third of the sugar =
$$\frac{100+gain \%}{100} \times CP$$

= Rs $\frac{110}{100} \times 1500$
= Rs 1650

Now, profit= Rs (1650 - 1500) = Rs 150

At a profit of 12%, we have:

$$\begin{array}{l} \text{SP of sugar} &= \frac{100 + \text{gain \%}}{100} \times \text{CP} \\ &= \text{Rs } \ \frac{112}{100} \times 4500 \\ &= \text{Rs } 5040 \end{array}$$

:. Gain= Rs (5040 - 4500) = Rs 5400

Profit on the remaining amount of sugar = Rs (540 - 150) = Rs 390 CP of the remaining sugar = Rs (4500 - 1500) = Rs 3000

$$\begin{aligned} \text{Gain percentage} &= \left(\frac{\text{gain}}{\text{CP}} \times 100\right)\% \\ &= \left(\frac{390}{3000} \times 100\right)\% \\ &= 13\% \end{aligned}$$

Therefore, the profit on the remaining amount of sugar is 13%.

Q33.

Answer:

CP of the land = Rs 96000

CP of two-fifth of the land = $\frac{96000 \times 2}{5} = \mathbf{Rs.}$ 38400

SP of
$$\frac{2}{5}$$
 of the land $=\frac{100-\log 8\%}{100}$ × CP $=\frac{94}{100}$ × 38400 $=$ Rs 36096

Loss = Rs (38400 - 36096) = Rs 2304

At a gain of 10%, we have:

SP of the land =
$$\frac{100 + \text{gain \%}}{100}$$
 × CP
= Rs $\frac{110}{100}$ × 96000
= Rs 105600

Profit on the remaining land = Rs (9600 + 2304) = Rs 11904 CP of the remaining land = Rs (96000 - 38400) = Rs 57600

∴ Gain percentage =
$$\left(\frac{\text{gain}}{\text{CP}} \times 100\right)\%$$

= $\left(\frac{11904}{57600} \times 100\right)\%$
= 20.67%

Therefore, the profit on the remaining part of land is 20.67%.

Q34.

Answer:

SP of the watch for Alex= Rs 1330 Loss percentage for Alex = 5%

CP for Alex =
$$\frac{\text{SP} \times 100}{100 - \text{loss} \%}$$

= $\frac{1330 \times 100}{100 - 5}$
= $\frac{133000}{95}$
= Rs 1400

Now, SP for Vinod = CP for Alex = Rs 1400
Gain percentage of the watch for Vinod = 12%

$$\begin{split} & \text{CP of the watch for Vinod} = \frac{\text{SP} \times 100}{100 + \text{gain } \%} \\ & = \text{Rs } \quad \frac{1400 \times 100}{100 + 12} \\ & = \text{Rs } \quad \frac{140000}{112} = \quad \text{Rs } 1250 \end{split}$$

Thus, Vinod paid Rs 1250 for the watch.

Profit and Loss Ex 10B

IMPORTANT FACTS

Cost Price:

The price, at which an article is purchased, is called its cost price, abbreviated as C.P. Selling Price:

The price, at which an article is sold, is called its selling prices, abbreviated as S.P. Profit or Gain:

If S.P. is greater than C.P., the seller is said to have a profit or gain.

If S.P. is less than C.P., the seller is said to have incurred a loss

IMPORTANT FORMULAE

- 1. Gain = (S.P.) (C.P.)
- 2. Loss = (C.P.) (S.P.)
- 3. Loss or gain is always reckoned on C.P.
- 4. Gain Percentage: (Gain %)

Gain % =
$$\left(\frac{\text{Gain x 100}}{\text{C.P.}}\right)$$

5. Loss Percentage: (Loss %)

Loss % =
$$\left(\frac{\text{Loss x 100}}{\text{C.P.}}\right)$$

6. Selling Price: (S.P.)

$$SP = \left[\frac{(100 + Gain \%)}{100} \times C.P \right]$$

7. Selling Price: (S.P.)
$$SP = \left[\frac{(100 - Loss \%)}{100} \times C.P. \right]$$

8. Cost Price: (C.P.)
$$C.P. = \left[\frac{100}{(100 + Gain \%)} \times S.P. \right]$$

9. Cost Price: (C.P.)
$$C.P. = \left[\frac{100}{(100 - Loss \%)} \times S.P.\right]$$

- 10. If an article is sold at a gain of say 35%, then S.P. = 135% of C.P.
- 11. If an article is sold at a loss of say, 35% then S.P. = 65% of C.P.
- 12. When a person sells two similar items, one at a gain of say x%, and the other at a loss of x%, then the seller always incurs a loss given by:

Loss % =
$$\left(\frac{\text{Common Loss and Gain \%}}{10}\right)^2 = \left(\frac{x}{10}\right)^2$$

13. If a trader professes to sell his goods at cost price, but uses false weights, then

Gain % =
$$\frac{\text{Error}}{(\text{True Value}) - (\text{Error})} \times 100$$
 %

Q1.

Answer:

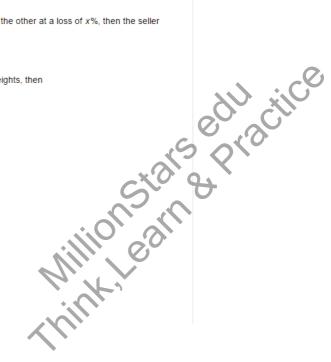

Marked price = Rs 4650 and discount = 18%

$$= Rs \left(4650 \times \frac{18}{100}\right) = Rs \quad 837$$

Selling price = marked price - discount

$$= Rs (4650 - 837) = Rs 3813$$

Therefore, the selling price of the cooler is Rs 3813.

Remove Watermark

Q2.

Answer:

Marked Price = Rs 960 Selling Price = Rs 816 Discount = MP - SP = Rs (960 - 816) = Rs 144 Rate of discount = $144 \times \frac{100}{960} = 15 \%$

Therefore, the discount on the sweater is 15%.

Q3.

Answer:

Selling price = Rs 546 Discount = Rs 104 Marked Price = ? Marked Price = selling price + discount = **Rs** (546 + 104) = Rs 650

Rate of discount
$$= 104 \times \frac{100}{650}$$

= 16%

Mondershare Therefore, the rate of discount given on the shirt is 16%.

Q4.

Answer:

Selling Price = Rs 216.20 Rate of discount = 8% Marked Price = ? SP = MP - discount Let the MP be Rs x.

Now,
$$x - \frac{8}{100} \times x = 216.20$$

 $\Rightarrow \frac{92x}{100} = 216.20$
 $\Rightarrow 92x = 21620$
 $\Rightarrow x = \frac{21620}{92}$
 $\Rightarrow x = 235$

∴ Marked price = Rs 235

Q5.

Answer:

Cost price = Rs 528 Rate of discount = 12% Marked price = ? SP= MP - discount Let the MP be Rs x. Now, $\frac{x-12}{100 \times x} = 528$ $\Rightarrow \frac{88x}{100} = 528$ $\Rightarrow 88x = 52800$ $\Rightarrow x = \frac{52800}{88}$ $\Rightarrow x = \text{Rs } 600$

Therefore, the marked price of tea set is Rs 600

Million Stars & Practice
Williams Aring

Q6.

Answer:

Let Rs 100 be the CP.

Then, marked price = Rs 135

Discount = 20% of MP

$$=\frac{20}{100}\times 135$$

= 27

Selling price = marked price - discount

Now, gain = SP - CP

$$\therefore$$
 Gain percentage = $\frac{gain}{CP} \times 100$

$$= \frac{8}{100} \times 100$$
= 8%

Q7.

Answer:

Let Rs 100 be the CP.

Then, marked price = Rs 140

Discount = 30% of MP

$$=\frac{30}{100}\times 140$$

$$=42$$

Selling Price = marked price - discount

$$\therefore Loss \ percentage = \frac{Loss \times 100}{CP}$$

$$=\frac{2\times100}{100}$$

$$= 2\%$$

Therefore, the shopkeeper had a loss of 2%

Q8.

Answer:

Cost price of the fan = Rs 1080

Gain percentage = 25%

$$\therefore \text{ Selling price } = \left\{ \frac{\left(100 + \text{gain \%}\right)}{100} \times \text{CP} \right\}$$

$$= \left\{ \frac{100 + 25}{100} \times 1080 \right\}$$

$$=\frac{125}{100}\times 1080$$

$$=$$
Rs 1350

Let the marked price be Rs $m{x}$.

Discount = 25% of Rs x

$$=\frac{25x}{100}$$

$$\Rightarrow 1350 = X - \frac{25X}{100}$$

$$\Rightarrow 1350 = \frac{100\mathbf{z} - 25\mathbf{z}}{100}$$

$$\Rightarrow 135000 = 75\mathbf{x} \Rightarrow \mathbf{x} = \frac{13500}{75} \Rightarrow \mathbf{x} = 1800$$

Therefore, the marked price of the fan is \emph{Rs} 1800

Q9.

Answer:

Cost price of the refrigerator = Rs 11515 Gain percentage = 20%.

∴ Selling price =
$$\left\{ \frac{(100 + \text{gain \%})}{100} \times C.P \right\}$$

= $\left\{ \frac{100 + 20}{100} \times 11515 \right\}$
= $\frac{120}{100} \times 11515$
= Rs 13818

Let the marked price be Rs \boldsymbol{x} .

Discount = 16% of
$$\mathbf{Rs} \ \mathbf{x}$$

$$= \frac{16\mathbf{x}}{100}$$

$$\Rightarrow 13818 = \chi - \frac{16x}{100}$$

$$\Rightarrow 13818 = \frac{100x - 16x}{100}$$

$$\Rightarrow 1381800 = 84x \Rightarrow x = \frac{1381800}{84} \Rightarrow x = 16450$$

Therefore, the marked price of the refrigerator is ${\it Rs}$ 16450.

Q10.

Answer:

The cost price of the ring is $\it Rs$ 1190.

$$\therefore \text{ Selling price} = \left\{ \frac{(100 + gain \%)}{100} \times C.P \right\}$$

$$= \left\{ \frac{100 + 20}{100} \times 1190 \right\}$$

$$=\frac{120}{100} \times 1190$$

= Rs 1428

Let the marked price be $oldsymbol{x}$

Discount = 16% of
$$\mathbf{Rs} \ \boldsymbol{x}$$

$$=\frac{16x}{100}$$

$$\Rightarrow 1428 = \boldsymbol{x} - \frac{16\boldsymbol{x}}{100}$$

$$\Rightarrow 1428 = \frac{100\mathbf{z} - 16\mathbf{z}}{100}$$

$$\Rightarrow 142800 = 84x$$

$$\Rightarrow \frac{142800}{84} = x$$

$$\Rightarrow x = 1700$$

Therefore, the marked price of the ring is $\mathbf{Rs}\ \mathbf{1700}$. Q11.

Answer:

Let Rs 100 be the cost price.

Gain required = 17%

∴ Selling price = Rs 117

Let the marked price be ${\it Rs} \; {\it x}$

Then, discount = 10% of x

$$= \frac{10}{100} \times \boldsymbol{x}$$
$$= \frac{\boldsymbol{x}}{10}$$

Selling Price = MP - discount

$$\Rightarrow 117 = x - \frac{x}{10}$$

$$\Rightarrow 117 = \frac{9x}{10}$$

$$\Rightarrow 9x = 1170$$

$$\Rightarrow x = \frac{1170}{9}$$

$$\Rightarrow x = 130$$

∴ Marked price = Rs 130

Hence, the marked price is 30% above the cost price.

Remove Watermark

Q12.

Answer:

Let Rs 100 be the cost price.

Gain required = 8%

Therefore, the selling price is ${\it Rs}$ 108.

Let $\mathbf{Rs} \ \mathbf{x}$ be the marked price.

Then, discount = 10% of x

$$= \frac{10}{100} \times \boldsymbol{x}$$
$$= \frac{\boldsymbol{x}}{10}$$

Selling Price = MP - discount

$$\Rightarrow 117 = \boldsymbol{x} - \frac{\boldsymbol{x}}{10}$$

$$\Rightarrow 117 = \frac{9x}{10}$$

$$\Rightarrow 9x = 1080$$

$$\Rightarrow x = \frac{1080}{9}$$

$$\Rightarrow x = 120$$

∴ Marked price = Rs 120

Hence, the marked price is 20% above the cost price.

Q13.

Answer:

Marked price of the TV = Rs 18500

$$=\frac{20}{100}\times 1850$$

$$= Rs 3700$$

Price after the first discount = Rs (18500 – 3700)= Rs 14800 Second discount = 5% of 14800 $= \frac{5}{100} \times 14800$ = 740Price after the second disco

$$=\frac{5}{100} \times 14800$$

The TV is available for Rs 14060.

Q14.

Answer:

Let the marked price of the article be Rs 100.

First discount = 20%

Price after the first discount = (100 - 20) = Rs 80

Second discount = 5% of 80

$$= \frac{5}{100} \times 80$$
$$= \mathbf{Rs} \ 4$$

Price after the second discount = (80 - 4) = Rs 76

Net selling price = Rs 76

∴ Single discount equivalent to the given successive discounts = (100 - 76)% = 24%

Anillion Stars Practice

Profit and Loss Ex 10C

Q1.

Answer:

List price of the refrigerator = Rs 14650 Sales tax = 6% of Rs 14650 = Rs $\left(14650 \times \frac{6}{100}\right)$ = Rs 879

Bill amount = Rs (14650 + 879)

= Rs 15529

Hence, the cost of the refrigerator is Rs 15,529.

Q2.

(i)

Cost of the tie = Rs. 250

Sales tax = 6% of Rs 250

$$= \text{Rs.} \left(250 \times \frac{6}{100} \right)$$
= Rs. 15
Hence, bill amount = Rs (250 + 15)
= Rs. 265

(ii) Cost of the medicines = Rs. 625 Sales tax =4% of Rs. 625

$$= \text{Rs.} \left(625 \times \frac{4}{100} \right)$$
= Rs. 25
Hence, bill amount = Rs (625 + 25)
= Rs 650

(iii) Cost of the cosmetics = Rs 430 Sales tax = 10% of Rs 430 = Rs $\left(430 \times \frac{10}{100}\right)$ = Rs 43

Hence, bill amount = Rs (430 + 43)

Million Stars & Practice
William Realth

(iv) Cost of clothes = Rs 1175
Sales tax = 8% of Rs 1175
= Rs
$$\left(1175 \times \frac{8}{100}\right)$$

= Rs 94
Hence, bill amount = Rs $\left(1175 + 94\right)$

=Rs. 1269

Therefore, total amount to be paid by Reena = bill amount of all the four items = Rs
$$(265 + 650 + 473 + 1269)$$
 = Rs 2657

Q3.

Answer:

Let the original price of the watch be Rs x.

VAT = 10% of Rs
$$x$$

$$= \mathbf{Rs} \left(\mathbf{x} \times \frac{10}{100} \right)$$

$$= \mathbf{Rs} \frac{10x}{100}$$

$$\therefore \text{ Price including VAT = } \mathbf{Rs} \left(\mathbf{x} + \frac{\mathbf{x}}{10} \right)$$

$$= \mathbf{Rs} \frac{11\mathbf{x}}{10}$$
Now, $\frac{11\mathbf{x}}{10} = 1980$

$$\Rightarrow \mathbf{x} = \left(1980 \times \frac{10}{11} \right)$$

$$= 1800$$

Hence, the original price of the watch is Rs 1,800.

Q4.

Answer:

Let the original price of the shirt be Rs x.

VAT = 7% of Rs x
= Rs.
$$\left(x \times \frac{7}{100}\right)$$
= Rs. $\frac{7x}{100}$
∴ Price including VAT = Rs. $\left(x + \frac{7x}{100}\right)$
= Rs. $\frac{107x}{100}$
Now, $\frac{107x}{100} = 1337.50$
⇒ $x = \text{Rs} \left(1337.50 \times \frac{100}{107}\right)$
= Rs 1250

Hence, the original price of the shirt is Rs 1,250.

Q5.

Answer:

Let the price of 10 g of gold be Rs x.

$$\begin{aligned} \text{VAT} &= 1\% \text{ of } \text{Rs } x \\ &= \text{Rs } \left(x \times \frac{1}{100} \right) \\ &= \text{Rs } \frac{x}{100} \\ &\therefore \text{ Price including VAT} = \text{Rs.} \left(x + \frac{x}{100} \right) \\ &= \text{Rs } \frac{101x}{100} \\ \text{Now, } \frac{101x}{100} &= 15756 \\ &\Rightarrow x = \text{Rs } \left(15756 \times \frac{100}{101} \right) \\ &= \text{Rs } 15600 \end{aligned}$$

Hence, the price of 10 g of gold is Rs 15,600

Q6.

Let the original price of the computer be Rs x.

$$egin{aligned} ext{VAT} &= 4\% ext{ of } ext{Rs.} \, x \\ &= ext{Rs.} \left(x imes rac{4}{100}
ight) \\ &= ext{Rs.} rac{4x}{100} \end{aligned}$$

$$\therefore$$
 Price including VAT $=$ $\mathbf{Rs.}\left(x+rac{4x}{100}
ight)$ $=$ $\mathbf{Rs.}\left(\frac{104x}{100}\right)$

Now,
$$\frac{104x}{100} = 37960$$

 $\Rightarrow x = \left(37960 \times \frac{100}{104}\right)$
= 36500

.. The original price of the computer is Rs 36,500

Q7.

Answer:

Let the original cost of the spare parts be Rs x.

VAT = 12 % of Rs.x = Rs.
$$\left(x \times \frac{12}{100}\right)$$
 = Rs. $\left(\frac{12x}{100}\right)$
 \therefore Price including VAT = Rs. $\left(x + \frac{12x}{100}\right)$
= Rs. $\left(\frac{112x}{100}\right)$
Now, $\frac{112x}{100}$ = 20776 \Rightarrow x = $\left(20776 \times \frac{100}{112}\right)$ = 18550

Hence, the original cost of the spare parts is Rs 18,550.

Hence, the original cost of the spare parts is Rs 18,550.
Q8.
Answer:
Let the list price of the TV set be Rs x.
VAT = 8% of Rs.
$$x$$
= Rs. $\left(x \times \frac{8}{100}\right)$
= Rs. $\frac{8x}{100}$
 \therefore Price including VAT = Rs. $\left(x + \frac{8x}{100}\right)$
= Rs. $\frac{108x}{100}$
Now, $\frac{108x}{100} = 27000$
 $\Rightarrow x = \left(27000 \times \frac{100}{108}\right)$
= 25000
Hence, the list price of the TV set is Rs 25,000.

Now,
$$\frac{108x}{100} = 27000$$

 $\Rightarrow x = \left(27000 \times \frac{100}{108}\right)$
 $= 25000$

Q9.

Answer:

Let the rate of VAT be x%. Then, we have:

$$840 + x\% \text{ of } 840 = 882$$

$$\Rightarrow \left(\frac{x}{100} \times 840\right) = 882 - 840$$

$$\Rightarrow \frac{84x}{10} = 42$$

$$\Rightarrow x = \left(42 \times \frac{10}{84}\right)$$

$$= 5$$

.: The rate of VAT is 5%.

Q10.

Let the rate of VAT be x%. Then, we have:

$$18500 + x\% \text{ of } 18500 = 19980$$

$$\Rightarrow \left(\frac{x}{100} \times 18500\right) = 19980 - 18500$$

$$\Rightarrow 185x = 1480$$

$$\Rightarrow x = \frac{1480}{185}$$

$$= 8$$

.. The rate of VAT is 8%

Q11.

Answer:

Let the rate of VAT be x%. Then, we have

$$34000 + x\% \text{ of } 34000 = 382500$$

$$\Rightarrow \left(\frac{x}{100} \times 340000\right) = 382500 - 340000$$

$$\Rightarrow 3400x = 42500$$

$$\Rightarrow x = \frac{42500}{3400}$$

$$= 12.5$$

.. The rate of VAT is 12.5%.

Millions are a practice with the property of t

Profit and Loss RS Ex 10D

Q1.

Answer:

(c)
$$33\frac{1}{3}\%$$

SP = Rs 100
Gain = Rs (100 − 75)
= Rs 25
∴ Gain percentage = $\left(\frac{gain}{CP} \times 100\right)\%$
= $\left(\frac{25}{75} \times 100\right)\%$
= $33\frac{1}{3}\%$

Q2.

Answer:

Q3.

Answer:

(b) 25%

CP = SP - Gain
= Rs (100 - 20)
= Rs 80
∴ Gain percentage =
$$\left(\frac{\text{gain}}{\text{CP}} \times 100\right)\%$$
= $\left(\frac{20}{80} \times 100\right)\%$
= 25%

Q4.

Answer:

$$\begin{pmatrix} \mathbf{d} \end{pmatrix} \text{ Rs } 72$$

$$\mathbf{SP} = \mathbf{Rs } 48$$

$$\mathbf{Loss} = 20\%$$

$$\mathbf{Now, CP} = \frac{100}{100 - \mathbf{loss \%}} \times \mathbf{SP}$$

$$= \mathbf{Rs } \left(\frac{100}{(100 - \mathbf{loss \%})} \times \mathbf{SP} \right)$$

$$= \mathbf{Rs } \left(\frac{100}{(100 - 20)} \times 48 \right)$$

$$= \mathbf{Rs } \left(\frac{100}{80} \times 48 \right)$$

$$= \mathbf{Rs } 60$$

$$\therefore \text{ Desired SP} = \left\{ \frac{(100 + \text{gain \%})}{100} \times \text{CP} \right\}$$

$$= \left\{ \frac{(100 + 20)}{100} \times 60 \right\}$$

$$= \text{Rs } \left(\frac{12}{10} \times 60 \right)$$

$$= \text{Rs } 72$$

Q5.

Answer:

(c) 120%

Mondershare Let the SP and CP of the article be Rs x and y, respectively. Gain percentage = 10%

$$\Rightarrow 10 = \frac{x - y}{y} \times 100$$

$$\Rightarrow y = \frac{10x}{y}$$

According to the question, we have:

SP = Rs 2x

$$\therefore$$
 Gain percentage = $\frac{gain}{CP} \times 100$

$$= \frac{2x - \frac{10x}{11}}{\frac{10x}{11}} \times 10$$

$$= \frac{12}{10} \times 100$$

$$= 120\%$$

Q6.

Answer:

(d) 125%

Cost price of a banana = Rs $\frac{2}{3}$ Selling price of a banana = Rs $\frac{3}{2}$

Now, profit = Rs
$$\left(\frac{3}{2} - \frac{2}{3}\right)$$
 = Rs $\frac{9-4}{6}$ = Rs $\frac{5}{6}$

$$\therefore$$
 Gain percentage = $\frac{gain}{CP} \times 100$

$$= \frac{\binom{5}{6}}{\binom{2}{3}} \times 100$$

$$= \frac{5}{6} \times \frac{3}{2} \times 100$$

$$= \frac{5}{4} \times 100$$

$$= 5 \times 25$$

$$= 125\%$$

Q7.

t. Melement

Answer:

(c) 20%

Let Rs x be the SP of each pen. SP of 10 pens = CP of 12 pens = Rs 12xCP of 10 pens = Rs 10xNow, gain = Rs (12x - 10x)= Rs 2x \therefore Gain percentage = $\left(\frac{\text{gain}}{\text{CP}} \times 100\right)\%$ = $\left(\frac{2x}{10x} \times 100\right)\%$ = 20%

Q8.

Answer:

(b) 25%

Let the SP of 100 pens be Rs x. SP of 1 pen = Rs $\frac{x}{100}$ Profit = Rs $\frac{20x}{100}$ = Rs $\frac{x}{5}$ Now, CP = $x - \frac{x}{5}$ = $\frac{4x}{5}$ \therefore Gain percentage = $\frac{x}{4x} \times 100$ = 25%

Q9.

Answer:

(d) 150%

L. C. M of 5 and $2 = (5 \times 1 \times 2) = 10$ Let 10 be the number of toffees bought.

CP of 5 toffees = Rs 1

CP of 1 toffee = Rs $\left(\frac{1}{5}\right)$ \therefore CP of 10 toffees = Rs $\left(\frac{1}{5} \times 10\right)$ = Rs 2SP of 2 toffees = Rs 1

SP of 1 toffee = Rs $\left(\frac{1}{2}\right)$ \therefore SP of 10 toffees = Rs $\left(\frac{1}{2}\right)$ = Rs. 5Gain = Rs (5-2) = Rs 3Gain percentage = $\left(\frac{\text{gain}}{\text{CP}} \times 100\right)\%$ $= \left(\frac{3}{2} \times 100\right)\%$ = 150%

Q10.

(d) 25%

L. C. M of 5 and $6 = (5 \times 1 \times 6) = 30$ Let 30 be the number of oranges bought.

 ${\bf CP}\ \ {\bf of}\ 5\ {\bf oranges}={\bf Rs}\ {\bf 10}$

CP of 1 oranges = Rs $\left(\frac{10}{5}\right)$

= Rs 2

 \therefore CP of 30 oranges = Rs (2 × 30)

 $= \mathbf{Rs} \, 60$

SP of 6 oranges = Rs 15

SP of 1 oranges = Rs $\left(\frac{15}{6}\right)$

 \therefore SP of 30 oranges = Rs $\left(\frac{15}{6} \times 30\right)$

= Rs 75

Now, gain = Rs (75 - 60)

= Rs 15

 \therefore Gain percentage = $\left(\frac{\text{gain}}{\text{CP}} \times 100\right)\%$ $= \left(\frac{15}{60} \times 100\right)\%$ = 25%

Q11.

Answer:

(a) 4%

SP of the radio = Rs 950

Loss = 5%

$$CP = \left\{ \frac{100}{(100 - loss)} \times SP \right\}$$

$$= Rs \left\{ \frac{100}{(100 - 5)} \times 950 \right\}$$

$$= Rs \left(\frac{100}{95} \times 950 \right)$$

$$= Rs 1000$$

Now, gain = Rs (1040 - 1000)

= Rs 40

Q11.

Answer:
(a) 4%

SP of the radio = Rs 950

Loss = 5%

CP =
$$\left\{\frac{100}{(100-loss)} \times \text{SP}\right\}$$
= Rs $\left\{\frac{100}{(100-5)} \times 950\right\}$
= Rs $\left(\frac{100}{95} \times 950\right)$
= Rs 1000

Now, gain = Rs (1040 − 1000)
= Rs 40
∴ Gain percentage = $\left(\frac{\text{gain}}{1000} \times 100\right)\%$

Q12.

Answer:

(a) 20%

Let Rs x be the CP of each article.

SP of an article = Rs $\frac{6}{5}$ x

Now, gain = (SP - CP)

$$= \mathbf{Rs} \, \left(\frac{6}{5} \, \mathbf{x} - \mathbf{x} \right)$$
$$= \mathbf{Rs} \, \frac{\mathbf{x}}{5}$$

∴ Gain percentage =
$$\left(\frac{\text{gain}}{\text{CP}} \times 100\right)\%$$

= $\left(\frac{\frac{x}{5}}{x} \times 100\right)\%$
= $\left(\left(\frac{x}{5} \times \frac{1}{x}\right) \times 100\right)\%$

Q13.

Million Stars & Practice

Williams and Start Services

White the start of the start

(b) Rs.1200

$$\begin{aligned} \mathbf{SP} &= \mathbf{Rs} \ 720 \\ \mathbf{Loss \ percentage} &= 25\% \\ \mathbf{CP} &= \left\{ \frac{100}{(100 - \mathbf{loss} \%)} \times \mathbf{SP} \right\} \\ &= \mathbf{Rs} \ \left\{ \frac{100}{(100 - 25)} \times \mathbf{SP} \right\} \\ &= \mathbf{Rs} \ \left(\frac{100}{85} \times 720 \right) \\ &= \mathbf{Rs} \ 960 \end{aligned}$$

∴ Desired SP =
$$\left\{ \frac{(100 + gain \%)}{100} \times \text{CP} \right\}$$

= Rs. $\left\{ \frac{(100 + 25)}{100} \times 960 \right\}$
= Rs. $\left(\frac{125}{100} \times 960 \right)$
= Rs. 1200

Q14.

Answer:

(a) 5%

$$CP = Rs. 20x$$

$$SP = Rs. 21x$$

$$Gain = Rs. (21 - 20)$$

$$= Rs. x$$
∴ Gain percentage = $\left(\frac{gain}{CP} \times 100\right)\%$

$$= \left(\frac{x}{20x} \times 100\right)\%$$

$$= 5\%$$

$$Q15.$$
Answer:

(a) 1.5% gain

$$SP \text{ of the first chair} = Rs 500$$

$$Gain percentage = 20\%$$
∴ CP of the first chair = $\left(\frac{gain}{CP} \times 100\right)$

Q15.

Answer:

(a) 1.5% gain

SP of the first chair = Rs 500 ${\bf Gain\ percentage}=20\%$

∴ CP of the first chair =
$$\left\{ \frac{100}{(100+gain \%)} \times SP \right\}$$

= Rs. $\left\{ \frac{100}{(100+20)} \times 500 \right\}$
= Rs. $\left(\frac{100}{120} \times 500 \right)$
= Rs. 416. 67

SP of the second chair = Rs.500 $Loss\ percentage = 12\%$

∴ CP of the second chair =
$$\left\{ \frac{100}{(100-\log 8\%)} \times \text{SP} \right\}$$

= Rs. $\left\{ \frac{100}{(100-12)} \times 500 \right\}$
= Rs. $\left(\frac{100}{88} \times 500 \right)$
= Rs. 568. 18

Total CP of the two chairs = Rs. (416.67 + 568.18)= Rs. 984.85

Total SP of the two chairs = Rs. (500×2)

$$= Rs. 1000$$

Since SP > CP, there is a gain in the whole transaction.

Now,
$$gain = Rs. (1000 - 984.85)$$

$$= Rs. 15. 15$$

∴ Gain percentage =
$$\left(\frac{gain}{CP} \times 100\right)\%$$

= $\left(\frac{15.15}{984.85} \times 100\right)\%$
= 1.5%

Q16.

(b) Rs 530

Let the CP be Rs x.

Then, we have: 625 - x = x - 435

 $\Rightarrow x + x = 625 + 435$

 $\Rightarrow 2x = 1060$

∴ **x** = Rs 530

Q17.

Answer:

(c) Rs 198

$$CP = Rs 150$$

Total
$$CP = Rs (150 + 10\% \text{ of } 150)$$

= Rs
$$\left(150 + \left(\frac{10}{100} \times 150\right)\right)$$

= Rs $\left(150 + 15\right)$

$$=$$
Rs $(150 + 150)$

= Rs 165
∴ Desired SP =
$$\left\{\frac{(100+gain \%)}{100} \times total \text{ CP}\right\}$$

= Rs. $\left\{\frac{(100+20)}{100} \times 165\right\}$
= Rs. $\left(\frac{120}{100} \times 165\right)$
= Rs. 198
18.
nswer:
a) Rs. 50
Let the CP be Rs x. Then, we have:
 $\left(105\% \text{ of x}\right) - \left(95\% \text{ of x}\right) = 5$
⇒ $\left(\frac{105}{100} \times x\right) - \left(\frac{95}{100} \times x\right) = 5$
⇒ $\left(\frac{105x}{100} - \frac{95x}{100}\right) = 5$
⇒ $\left(\frac{105x}{100} - \frac{95x}{100}\right) = 5$

Q18.

Answer:

(a) Rs. 50

Let the CP be Rs x. Then, we have:

$$(105\% \text{ of } \mathbf{x}) - (95\% \text{ of } \mathbf{x}) = 5$$

$$\Rightarrow \left(\frac{105}{100} \times \mathbf{x}\right) - \left(\frac{95}{100} \times \mathbf{x}\right) = 5$$

$$\Rightarrow \left(\frac{105\mathbf{x}}{100} - \frac{95\mathbf{x}}{100}\right) = 5$$

$$\Rightarrow \frac{(105\mathbf{x} - 95\mathbf{x})}{100} = 5$$

$$\Rightarrow \frac{10\mathbf{x}}{100} = 5$$

$$\Rightarrow \frac{\mathbf{x}}{10} = 5$$

$$\Rightarrow \mathbf{x} = 50$$

$$\therefore$$
 CP = Rs 50

Q19.

Answer:

(b) 8%

Let the CP be Rs 100.

Then, marked price = Rs 120

Discount = 10% of MP

$$= \text{Rs.} \left(120 \times \frac{10}{100} \right)$$

$$= Rs. 12$$

Now,
$$SP = (MP) - (discount)$$

$$=$$
Rs $(120 - 12)$ $=$ Rs 108

Gain percentage =
$$(108 - 100)\%$$

Q20.

Million Stars & Practice

Williams and Stars of the Children o

(c) 1% loss

Let the CP be Rs 100. Then, marked price = Rs 110 Discount = 10% of MP

= (10% of Rs. 110)
= Rs.
$$\left(110 \times \frac{10}{100}\right)$$

= Rs. 11

Now,
$$SP = (MP) - (discount)$$

= $Rs (110 - 11)$
= $Rs 99$
∴ $Loss \ percentage = (100 - 99)\% = 1\%$

Q21.

Answer:

(c) Rs.750

Let the basic price be x. VAT = 10% of Rs x = Rs $\left(\mathbf{x} \times \frac{10}{100}\right)$ = Rs $\frac{\mathbf{x}}{10}$ ∴ Price including VAT = Rs $\left(\mathbf{x} + \frac{\mathbf{x}}{10}\right)$ = $Rs. \frac{11x}{10}$

Now,
$$\frac{11\mathbf{x}}{10} = 825$$

 $\Rightarrow \mathbf{x} = \left(825 \times \frac{10}{11}\right)$
 $\Rightarrow \mathbf{x} = 750$

 $\mathrel{.\,{\cdot}}$ The basic price of the watch is Rs 750.
