

Process. Development. Team. Project. Development. Team. Profit. Development. Team.

We have been very successful designing custom material handling solutions for customers by following a few specific steps.

1. Preliminary budget and time frame discussions to determine if the project is possible and worth pursuing further
2. Look at a Preliminary Concept & Submit Formal Proposal
3. Deposit & PO
4. In-Plant Design Visit
5. Final Design Approval / Agreement for both Form & Function
6. First Parts are Tested & Approved
7. Full Production

This PDT (Product Design/Development Team) process has resulted in many improved production plants and many satisfied customers.
