WAREHOUSING

Gulf Compress has announced an $8.00 per bale payment to be made directly to the grower for the 2025 crop year. As members and owners of Gulf Compress, our intent is to ship all cotton to our designated warehouse. However, we understand that, in some cases, shipping directly to a merchant-owned warehouse maybe more economical. We are able to accommodate shipments to alternative warehouses, provided we receive adequate advance notice to make the necessary arrangements.

If you are considering using a different warehouse, please notify us as soon as possible so that we can plan accordingly. If you are uncertain about your choice, we are happy to provide a tariff sheet outlining all producer charges, which we can review together to help you make an informed decision. Please keep in mind that all warehouses are responsible for supplying tags, compression, and freight.

WAREHOUSE(s): _____

PRODUCER / GIN TITLE TRANSFER AGREEMENT

The undersigned Producer is authorized to deliver cotton for ginning to Edcot Coop Gin Co. ("Gin"). By signing below, the Producer authorizes the Gin to transfer title of the cotton from the specified Entity to the Merchant designated by the Producer. This title transfer will be executed through the Electronic Warehouse Receipt (EWR) system. However, it is understood that neither the Gin nor EWR shall be held liable for payment to the Entity for the transferred cotton.

Upon completion of the title transfer, the Merchant will be recognized as the legal owner of the cotton, and the Entity will relinquish all beneficial interest in the commodity. Furthermore, the Producer agrees that all ginning charges incurred by the Entity named above must be fully settled before the Gin will proceed with the title transfer on behalf of the Entity.

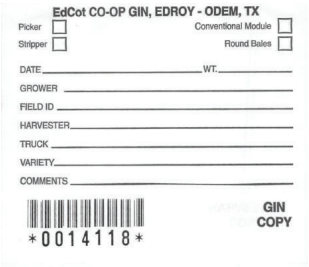
Prefilled RFID Tags

What are prefilled tags?

- RFID Tags are a 4" X 6" adhesive label that contain an RFID chip and antenna.
- A RFID printer saves information to the chip in the label.
- These are attached to an object, and when scanned by the RFID reader, it sends the stored data to the scale.

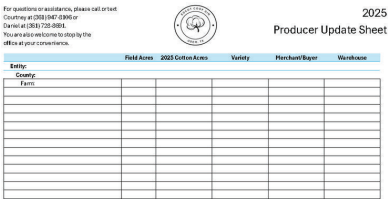
Why use them?



- No writing required in the field.
- Records created automatically at the scale.
- Reduces manual errors
- Full digital back up.

Traditional Module Tags are still available if you prefer.

How do they work?



- You fill out the Producer Update Sheet
- We estimate how many modules you will have for each field.
- We print 3 tags per module
- Tags are spot-check for accuracy during printing

Why 3 Tags?

- Tag each end of the module (ideally at the 10 o'clock position)
- Keep the third tag as a backup or for your records
- Need more?
  - We've printed 5 or even 9 tags per module before

Custom Options

Want your tags to include:

- Variety
- Custom harvester
- Harvest method

Let us know, we'll print it or provide a special tag to include what you need

Extra Notes

- Extra prefilled tags can't be reused
- If you drive through the scale, tags left in your truck will scan at the scale, no harm done, let us know and we can clear the record before the next truck.
