WHAT'S NEW IS SAGE 50 2019 U.S. EDITION?

The Sage 50 2019 - US Edition release delivers new feature enhancements and improvements for your business, as well as an integration between Sage 50 and Sage CRM, to assist you in making your business life even easier!

Features in this release pertain to both Sage 50 perpetual license and Sage 50c (cloud) users.

Expanded Sales Order Dropdown Menu & Totals in Quotes and Purchases List Views

The Sales Order dropdown menu has been expanded to match the current field width of the Invoice Number field. In addition, dollar totals are now featured in the Quotes and Purchases List views.

.NET FRAMEWORK 4.7.1 UPDATES

Sage 50 now leverages .NET Framework 4.7.1, which is already installed on most operating systems through standard Windows updates. If the update does not exist during installation, .NET Framework 4.7.1 will be installed during the installation process. Several advantages of this update include:

- Performance & Reliability improvements
- Security improvements
- Compliance with latest native TLS security protocol standards

USER SECURITY UPDATES

Sage 50 provides several options that can maintain data security and deter unauthorized users from possible fraudulent activities. To provide the control needed with multiple users, Sage 50's updated existing security settings in the installer were streamlined to minimize the occurrence of User Account Control (UAC) message prompts. A standard user will need Administrator-level credentials to perform some tasks that require Administrator-level permissions to execute.
