

Continuing your MIPS quality reporting after the ePreop transition

If your anesthesia group relied on the ePreop quality product for MIPS coding, your 2026 reporting is still on track. We pick up where it left off, including the months when no tool was capturing your data.

Your 2026 data is still recoverable

Quality data for the 2026 performance year is submitted to CMS in early 2027. Because we abstract measures from your existing records, gaps in coverage this year can still be coded and reported.

Months without a tool

Still recoverable from your records.
Shaded months are illustrative.

Start by January 31, 2027

Leaves room to review gaps and
abstract your full year carefully.

Submission closes March 31, 2027

The CMS deadline for 2026 MIPS data.

Dates reflect CMS's standard submission window. We confirm them each year.

Keep your registry, or submit directly to CMS

C3 Partners is a CMS-qualified registry, not a QCDR. If your group reports through NACOR or another QCDR, you can keep doing so: we prepare and validate your data and submit through them. If you prefer, we submit directly to CMS. Either way, your clinical documentation stays where it is.

Getting started

- 1 Intro call**
We learn how your group has reported in past years, which measures you use, and how you'd like to submit.
- 2 Secure data access**
We sign a business associate agreement and set up access to the records we need. Your team knows exactly what's involved before anything starts.
- 3 2026 gap review and coding**
We find any months or measures without coverage, code the full year, and review results with you before anything is submitted.

Four anesthesia groups, more than 200 anesthesiologists, have already moved their MIPS quality coding to C3 Partners this year.

[Client quote, with name and title, if a client agrees. For example, a sentence on how the transition went.]

About C3 Partners

C3 Partners is a CMS-qualified registry that helps physician groups earn the Medicare reimbursement their quality of care deserves. Our MACRA Monitor and Lumina tools handle measure coding, data validation, and performance tracking, so you can see where you stand before CMS does.
