INSTRUCTIONS AFTER NASAL CAUTERY

PROCEDURE CODE: 30903

You may experience slight to moderate bleeding after cautery. Full effect will not occur for up to two days.

You may blow your nose **gently**.

You should keep your septum moistened with vaseline or other antibiotic cream, i.e. Neosporin.

If you are having an active bleed that you cannot control you will need to go to the Emergency Room to have your nose packed.

We cannot cauterize while your nose is bleeding.

If you have any questions, please call our office at (810) 244-8400 and ask for Dr. Mukkamala's Medical Assistant.
