

Public health interventions in pandemics and epidemics

Course is available

 Learnings Discussions Progress Collab Space Course Details Documents Announcements share tweet share mail

The 21st century has witnessed changes - travel and trade, urbanization, environmental degradation and other trends that increase the risk of disease outbreaks, their spread and amplification into epidemics and pandemics. At the same time, the science and knowledge around infectious hazards are constantly evolving. This introductory level online course will guide you through the new landscape by providing information and tools you need to better manage disease outbreaks and health emergencies. Materials have been originally designed for WHO African region purposes and have therefore references to Africa more than other continents.

Overview: The 21st century has witnessed changes - travel and trade, urbanization, environmental degradation and other trends that increase the risk of disease outbreaks, their spread and amplification into epidemics and pandemics. At the same time, the science and knowledge around infectious hazards are constantly evolving. This introductory level online course will guide you through the new landscape by providing information on interventions needed to better manage disease outbreaks and health emergencies. Whether you work at the global, regional or country level, we hope that this course will update your knowledge on infectious hazards management and strengthen your access to tools, resources and expertise across WHO. We hope that you will be encouraged to participate in a discussion board to gain more in-depth knowledge from other experts working in this field.
